If you study the business well and make a good selection of a variety you have taken a good step toward making the proper start. I have seen many cases where persons would suddenly become much interested in fowls and, expecting to "get rich quick," with little or no study of the business or varieties would plunge wildly into it, buying expensive equipment and investing in expensive fowls of an unsuitable variety. As they do not understand the business they soon become discouraged and failure follows. You must start small and grow big, learning the business as you go along, for although you may learn much from reading and talking with old breeders, you must also learn much by experience.

After you have decided upon your breed you are ready for your stock, i.e., if you are going to start with stock. Another good way is to buy eggs for hatching, and if you do this you should have two good large, broody hens awaiting them, so that if one gives up the job before the hatch is complete the other can be substituted.

You should write to several breeders of your variety for their catalogues and then you can decide for yourself which you think can suit you best. Don't buy cheap birds or eggs. The best are cheapest in the long run. Buy the best that you can possibly afford. I would consider a \$25 trio a much better investment than a \$25 pen. The same may be said of eggs. Better buy one \$10 setting than two \$5 ones. In short, do not sacrifice quality for quantity. Buy your eggs or stock from a breeder that has a good show record at some big show; from one that has bred his flock for a number of

BUFF PLYMOUTH ROCK.

First hen at St. Louis, second hen at Kansas City, and shape special at each show. Bred and owned by E. L. Delventhal, Warrenton, Mo.

years and has produced a uniform strain, or from a young breeder who is breeding some noted strain pure and is producing birds with a good score card.

Having read your poultry journals, you will know exactly how to house and care for your birds, and therefore I will not go into detail along this line here. But, lest you forget, let me repeat something that nearly all experienced breeders are saying: Build cheap, convenient houses, using plenty of cloth and little glass. However, they should be well built, dry and free from drafts. Cloth fronts are cheap and insure good, healthy fowls, but glass is expensive and unhealthy. These are the best houses possible, and you have plenty of money left to buy good stock with. Good birds and cheap, though comfortable, curtain-front houses are a good combination for successful poultry keeping. Turn this rule around and keep poor fowls in expensive "steam-heated, glass-case" houses, and failure is assured. I know these statements to be true, for I have seen them tried out time and again.

When you have your fowls at home in your back yard you are started. Now study your fowls carefully, work hard for their benefit, care for them well, feed them regularly clean, sound grain, and success will surely be yours, and you will be well repaid for your trouble—repaid with health, happiness and the almighty dollar.

PRIZE ARTICLE DEPARTMENT

We would like to have all of our readers compete for the prizes offered each month in this department. Send as many articles each month as you desire. For the best article we will pay \$3.00 and for the second best \$2.00. Make your communications about a column in length, which is about 600 words. They should be timely and appropriate to the season. Articles describing appliances and houses and accompanied by rough drawings are especially desirable. All the communications must be accompanied by a letter stating that they have been sent in for competition in the Prize Article Department. All articles must be written on one side of the paper only. Articles received after the 15th of the month will be too late for competition in the month following, but will be entered the next month. No manuscript will be returned, but all who send meritorious articles will be given a year's subscription to AMERICAN POULTRY JOURNAL, whether the article is published or not.

The first prize in the contest this month has been awarded to J. Nicholson, Houston, Texas, and the second prize to H. G. Hinchliffe, Corona, L. I.

COMMON FAULTS OF THE BEGINNER.

While I will not deal exhaustively on this subject (though pages and pages could easily be written on it) for lack of space, I will give a few most common faults of the beginner in the order of their importance, with a few comments on those which I think require them.

1. The first and most common fault is that most beginners are easily discouraged. They may start with the finest stock obtainable, may give them the best of feed and care,

for them. Do not understand me as advocating the use of insanitary houses, for I would never think of doing this. Along with the question of feed may be considered the provision of sufficient cool, clean water. Never fail to provide fowls with fresh water daily—twice a day is better. The principal constituent of the egg is water, so one can easily see why it is to his gain to provide his fowls with water. Grit—the chickens' teeth—should never be forgotten. Without grit in some form the chickens will not be able to digest all the food given them, thus much will be wasted which cannot well be spared by most beginners. Charcoal, oyster shell, and bone meal, if possible, should always be accessible to the chicks.

4. A fourth error made by those starting in the poultry business is that they build too large, too costly, and too fancy poultry houses. This should always be avoided. The poultry do not lay any better in fancy houses, which may not prove comfortable to the fowls though they do to your eye, than in well ventilated, comfortable houses. Of course personal taste and finances must be taken into consideration in the planning and building of the houses. If one builds a house of the three C's, as advocated by the late T. E. Orr, namely, Comfort (both to owner and fowls), Cleanliness and Convenience, one will have little cause to regret one's action. Build well and wisely. J. Nicholson.

Houston, Texas.

HINTS FROM THE BUYER.

In one of the largest retail meat and poultry departments in the greatest store in New York city the men were busy

One of the 1909 matings in S. C. White Orpingtons on the plant of C. S. Byers, Hazelrigg, Ind.

and may have very comfortable poultry houses, but they, as a rule, expect too much from the fowls in return. When the returns do not come up to this expectation they immediately condemn poultry and poultry raising as being no good, forgetting entirely that there is such a thing as overfeeding and overpampering. When I first received my incubator I ruined fifty-three eggs in the first hatch. In the second I ruined forty-four. Did this serve to discourage me? Not a bit. It only made me all the more eager to see what I could do. I set it a third time, and hatched twenty-two chicks out of thirty-eight fertile eggs. More would have hatched if my curiosity had not got the best of me. So I set it a fourth time. It hatched twenty-seven chicks out of twenty-nine eggs. This is a good example of perseverance which no true poultryman lacks.

2. Another common fault is that many beginners start too large, thinking that since a few fowls may be made to net a profit of \$2 per hen, a hundred hens may easily be made to net \$200. This is a most erroneous impression, and one that is responsible for the great number of discontented poultry raisers today. When but a few fowls are kept more attention is paid and greater care given than is possible when large flocks are raised. To the careful attention to details much is responsible in the poultry business. It has well been said that the poultry business is one of details in which the little things count. I would advise those starting in the business to start small, especially if they have had no previous experience, and to grow and enlarge as their experience and knowledge increases.

3. A third great fault of the beginner is that he does not provide proper food. The agitation of the "balanced ration" question is causing many beginners to go astray. With proper feed much can be accomplished by the fowls, because they have something to work on. These results from the fowls can even be secured with extra comfortable quarters

rolling in barrel after barrel of dressed poultry. Others opened the packages to take out the birds and prepare same for the counter.

I was watching the above operations with greatest interest, for I am deeply concerned in the poultry business from the poultryman's standpoint, but at the same time personally acquainted with the buyer for this house.

The shipment that had just come in, I learned, was purchased from a commission man who has many small sources of supply, and consequently as far as I could see it was a rather ragged lot of goods that only the clever selling of trained clerks in this market could dispose of.

My friend, I found, was very noncommittal in regard to his operations in the New York poultry market, but did say a few things about poultry shipping methods that ought to make our commercial brethren sit up and take very careful notice.

There were many very fine specimens in the irregular mixed lot which, when separated, were easily retailed as prime goods, but only cost this buyer a scrub price; and there were other samples that would cast discredit on the intentions of any man.

I thought it would be of benefit to the raisers of poultry to know something of the opinions of the commission men and buyers in regard to the way in which many poultrymen squander the final results of many months of careful work by one day of careless packing.

The prices on poorly graded stock is about the lowest on the list and the middleman and retailer make about all the real money that there is in such a deal.

Here are a few hints on the matter of packing and shipping which will apply, I am sure, to every corner of this country, and if followed will in the aggregate mean much to the pocket of the man behind the hen.

goods that are uniform and carefully prepared, thus acquiring a reputation, is the result to be first accomplished.

Now, to do this will require careful feeding for two or three weeks before the killing. In most large cities the plump, clean bird, with yellow skin and legs, is preferred,

Single comb Buff Leghorn cock, bred and owned by H. Cregar & Sons, 447 Hannah Ave., Forrest Park, Ill.

and this yellow effect can be secured most cheaply by using corn to a greater extent.

All fowls should be killed by cutting through the roof

Single Comb Buff Leghorn cockerel, bred and owned by H. Cregar & Sons, 447 Hannah Ave., Forrest Park, Ill.

of the mouth and then the carcass bled, picked and chilled before final packing. Allow no food to remain in the crop after death, as the bird is then unable to eat it, and it is liable to contaminate and spoil good eating for mankind. The best way to do this is to give no food for twenty-four

hours before execution, but provide plenty of water, that what was eaten previously can be readily digested. In this connection it might be well to advise that some cities have passed ordinances which make the possessor of dressed poultry with filed crops liable to lose his goods by confiscation.

To mar by breaking bones or tearing skin is to decrease the inviting appearance of a roaster or fowl or chicken, and you will lose probably 50 per cent of your margin of profit. A little care and time will mean a saving or save a disappointment.

In shipping packages each must solve his own problem, though here's a word to the fellow who tries to put a dozen little chickens in a big box, or tries to crowd the larger birds into a barrel when they would look better in a box. Use a light package, but capable of holding, say, two hundred pounds, and no more. Pack turkeys, geese and larger chickens, such as roosters or choice fowls, in boxes. Chickens can be packed in barrels; and provide enough ice

Henry G. Hinchliffe.

A CASE OF CHICKEN FEVER.

I wish to tell the story of a boy that I know who is interested in poultry raising. He is fifteen years of age and has been in poor health most of his life. Last spring he was convalescing after an illness of some duration and being a great reader, he read a book on poultry raising which his sister brought him from the public library. He had not read it long until he had what his parents and the rest of his family called a bad case of chicken fever. The result was that after he had finished reading the book he would be the owner of some White Wyandottes and he began to plan how to get them.

As there had been a new family who just moved into the neighborhood with a flock of white chickens, he prevailed on one member of his family to buy a setting of eggs from them, after first getting the permission to use the first setting hen which belonged to his mother. He did not have to wait long till old Biddy got down to business. How he petted her and watched her until he was sure he could trust her with the setting of eggs.

Instead of the chicken fever wearing off in a few days, as all supposed it would, it seemed to develop into a settled case. He read everything about poultry he could find and the next step was to subscribe for the American Poultry

Journal. If he had not had the fever before, I think he surely had it now. From the time he signed for it until the first one came he watched for it more anxiously than he did for his meals.

If I remember right it was the last week in April when Biddy hatched out seven little white chickens. My! There wasn't anything quite good enough to put them in, but he was well enough now to hunt a box to put them in. He found one about two feet square and a little higher. He put some straw in and then put Biddy and her white family in, where he kept her until he could get a better place. Then he made a coop with a slanting roof and the front made of slats far enough apart so the little chicks could run out and get food and water. It also had a door with hinges and a board floor. He made this himself in his father's furnace room adjoining the greenhouse, after having read several articles on the construction of coops.

After putting Biddy in her new home in the greenhouse

you will say, "Its the same old story. Went to the poultry show and received the premium." But instead he went to the show with his brother, and as there was a coop of chickens given away every night to the one holding the lucky ticket he happened to draw a coop of White Plymouth Rocks. To say he was glad is putting it very mildly. To quote his own words: "I jumped up and down I was so glad. I was as glad as I was when I passed my grades at school" (for he had to miss school so much on account of his health).

To finish my story I will say that if you could step into the dining room of his home and see the pictures of Mr. Wm. Barry Owen and his manager, Maurice E. Delano, and also of the flock of Mme. Paderewski's valued at \$7,500, and of the famous \$10,000 hen, "Peggy," and of some others which he has framed, you would think as his family does that he still has the chicken fever and that the fever is a healthy fever.

SCENE ON THE LAKEWOOD FARMS, LAKEWOOD, N. J.

his next step was to make a study of the best foods for young chicks. He had already read enough on cleanliness to make him very particular in this respect. His next step was to begin to prepare a hen-house for his chicks when they should need it. Being without funds and too sick to work for money with which to carry out his plans, he was given permission to sell all the old iron he could find. By his brother hauling it to town for him he realized sixty cents, with which he bought three dry goods boxes. I remember how he tugged and worked to dig post holes, for he was very weak from his recent illness and it was a long time before his hen-house was finished and painted, both because of his weakened state and he had to buy all his material with money he earned himself.

I will not go into detail about the raising of his chicks more than to say that they had the best of care and in the fall he had six nice pullets and one rooster. January 1 found them penned in a yard with a wire fence. This pen adjoined his hen-house.

At this time the poultry show opened in our city and

If this proves to be of enough interest to be printed I will tell more about this boy at some future time.

Bloomington, Ill.

Mrs. J. D. Gulick.

RAISING THE CHICKS.

A chick well hatched is half raised, is probably true, but to be well hatched the chicks should be from the right kind of eggs, and the eggs again from the right kind of hens. So to begin with eggs used for hatching should be from two-year-old hens, that have not been forced for eggs when they were pullets by the use of egg tonics, egg makers, laying mash, poultry powders, or whatever they are called. They should also not have been fed heavily during the winter for eggs, just so they will come in fine laying condition when eggs are wanted for hatching.

The house and hens should be kept free from lice, so they will be of strong vitality, and any bird having had any disease or showing any signs of it, should not be used as breed-

ers. Mating them about two weeks before eggs are to be used for hatching is better than to keep male birds constantly with the hens, for the eggs will be better fertilized and will produce stronger chicks.

Hens should be fed some green bone or hopper fed on beef scrap and should be on grass range. The hens should also be fed only on whole, sound grains, such as oats, wheat and corn, and not fed on sloppy or wet mash.

Hens managed and fed in above way will lay lots of eggs in the breeding season and the eggs will be almost all fertile, and nearly all of the fertile eggs will hatch in a good incubator rightly managed.

I have had them as high as 99½ per cent fertile from hens managed and fed in above way, hopper feeding them on oats and beef scrap. The eggs to be used for hatching should not be saved up long, not older than a week if possible, and if only a few days old they will be better yet.

As most people will know how to operate an incubator I

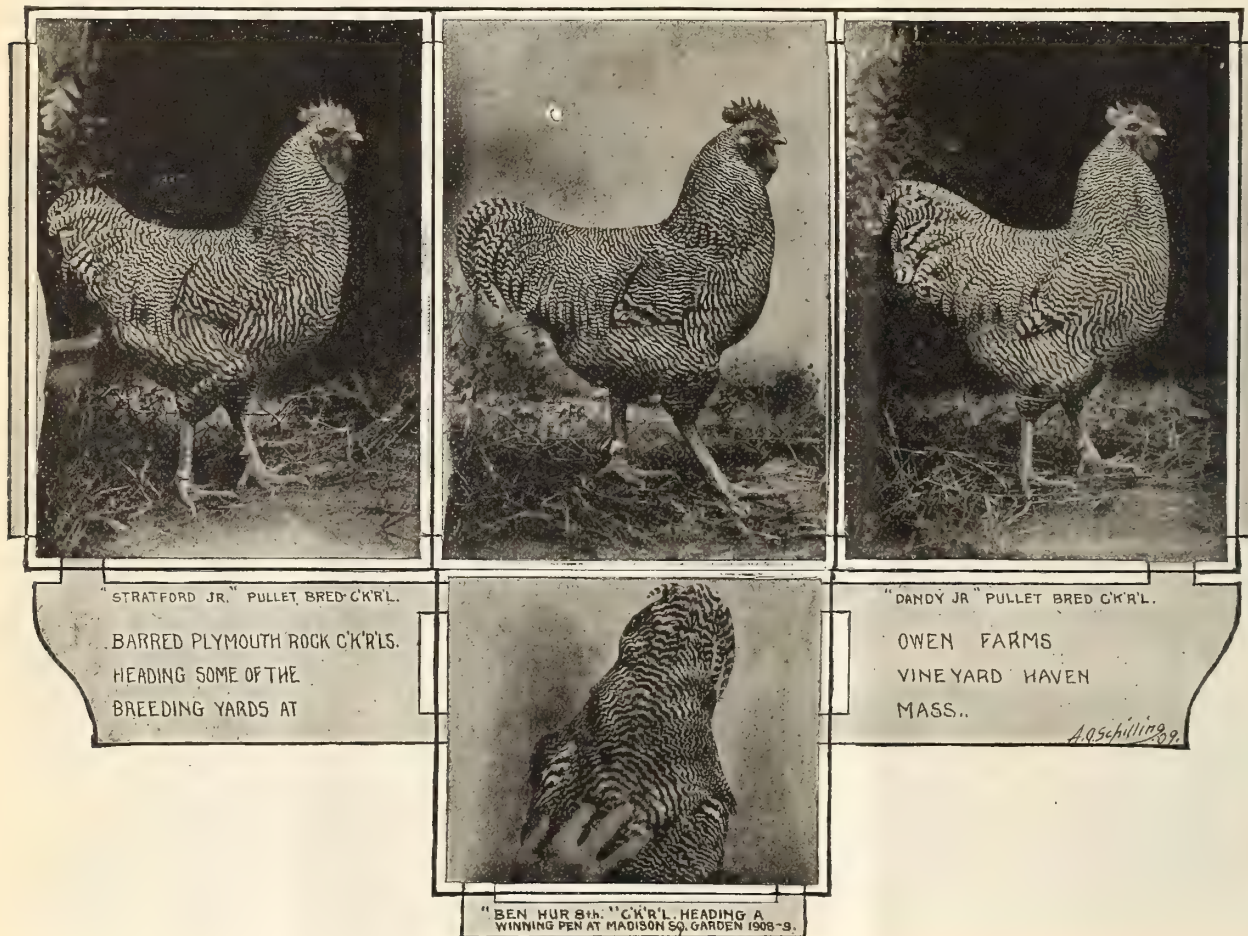

about the only feed that should be given them the first day.

They should also be fed the same feed again the second day, about twice, with a few feedings of chick feed between, so that they will be fed about five times the second day. They should also be given green food while in the brooder, which must be cut up fine. They will devour large quantities of this stuff if it is given them, and it is very good for them.

After the seventh day keep a hopper of beef scrap before them all the time. After they are a week old three feeds a day will be enough.

I try to get them out on the ground as soon as possible if weather is good, giving them the nursery of the brooder for about two days, when they are let in the exercising room. And after they are a week old, if weather is favorable, I let them outside of brooder in a small yard, which is always made a little larger, and I give them free range when about three weeks old.

Cracked corn and cracked wheat, with a little hulled oats,

will not say much on this subject. Incubator should be perfectly level and the first time eggs are put in incubator their large end should be up a little, so chick will form in that end, and it is better not to turn or cool the eggs after the evening of the eighteenth day. If heat has been right chicks should be all out by the end of the twenty-first day, and the egg tray and egg shells and unhatched eggs removed. Ventilators should be opened up and the chicks left in the machine till the noon or afternoon of the twenty-second day, so they will be about thirty-six hours old, or probably a little more, when they are removed to the brooder, which has been previously made ready and running at a temperature of 95 or 100.

The chicks, when removed to the brooder, should then be given their first feed, for they now will be about forty to forty-eight hours old. They should be given water slightly warmed, also charcoal and some chick grit or fine sand; and then the first feed should follow, which should be composed of hard boiled eggs chopped up fine, mixed with a little steel cut oat meal and dry bread crumbs, which is

is a fair chick feed if one don't want to buy one of the commercial chick feeds.

Care should also have been used to keep temperature about right, starting with 95 or 100 and gradually lowering it at the rate of about 5 degrees a week, so that in moderate weather chicks will need no heat when about four to five weeks old. For at that age chicks will be about old enough to be put in small colony coops.

Chicks should always have plenty of water while in brooder, also charcoal and grit; litter should be put in fresh when necessary so chicks will always have a clean brooder, clover leaves making a fine litter.

One of the best things to give a bunch of chicks that don't grow well, that are always peeping even when they have got everything, whose wings grow, but body don't, that even seem to get smaller, is a pint or quart of fresh warm milk night and morning for a few days, which will make them all right again.

Wm. Allers.

Lombard, Ill.

POULTRY IN THE SUBURBS.

Two years ago this May we moved to the suburbs of this city, and having a good range for chickens decided to try our luck, not at that time reading any poultry journal or farm paper. We were doing as thousands of others, raising poultry for our own table, and not giving them much thought, but my husband subscribed for the Indiana Farmer and the page devoted to poultry caught our eye. We then had only Barred Rocks, just the common barnyard fowls, so hearing of and reading so much about Rhode Island Reds, my husband purchased a setting of eggs from a man close who

POUKAPOG.

First R. C. R. I. Red cock at Rockford, Ill., 1909. Owned and exhibited by A. W. Blanchard, Beloit, Wis.

claimed they were full bloods. We only got one setting and I am very glad that was all. We still thought they were all right until we went to the poultry show at Anderson in January, when we found we had nothing but scrub Reds. They had no color, shape nor size of the full blood R. I. R. Of course we were very much disappointed, but did not have the capital to buy stock. We had thirty scrub hens of mixed kinds and two of our R. I. Red roosters. We decided we would raise what scrubs we could and buy eggs again, being sure this time that we would get eggs from some good, reliable advertiser and pay enough to insure good birds. As to our scrubs: It is now the 13th of May. I have 127 young chickens hatched from our own eggs. Out of these I have

WHITE WYANDOTTE.

Second pullet at Indianapolis, 1909. Bred and owned by George Barkdoll, West Unity, Ohio.

lost three, two dying soon after they were hatched, one not absorbing the yolk properly, and the hen mashed the other. We have used hens to hatch altogether. I have eleven that were hatched the last day of February which are almost large enough to fry. I feel confident if they were of some full blooded stock they would have weighed two pounds

or more at this time. While there may be two or three that would weigh that all of them would not. I have thirty-three hatched the 12th of March which are not far behind the eleven. We are using the philo coops, the kind he is making now, but we also put an opening in them which he does not. We put a hen with twenty-five chicks in each coop. After we give them a good start we do not confine them, but let them have full range on nice days, but during the month of March and April kept them confined most of the time, as this has been a bad spring on little chickens. Now as to feed. I am in no particular hurry to feed when I first take from the nest. The first ones hatched are from thirty-six to forty-eight hours old, I suppose, but the youngest ones never seem to care to eat, so I really don't think it is of much difference about the time of feeding provided you don't wait too long. Hatching with a hen some will hatch almost twenty-four hours sooner than others, so it would be impossible to feed all at the same age. As to an incubator, I do not know how evenly they hatch, as we have never owned one. If our hens would do as well in the future, going to setting early, etc., would not think of an

FIRST PRIZE WINNING PULLET NEW YORK 1908-09.
OWNED BY OWEN FARMS, VINEYARD HAVEN, MASS.

incubator, but as our aim is to go into the poultry business right I expect at some future time we will get an incubator. Now as to what I do feed: To start with I use bread crumbled up fine; sometimes I have added the yolk of an egg to this, mixing in well. I also use chick starter or feed, as it is called, corn bread baked as for our own use. Variety is what they need. I think I try to keep bran before them at all times, and how it does disappear. No matter how often you go to the coop a goodly number is at the bran box. I also mix prepared charcoal with the bran, being sure that they get some charcoal. I feed often, but not much at a time. Some I gave both milk and water, others only water, as we do not have milk without buying it. If we did would keep it before them all the time. Now, don't think we are going into the scrub business, for we are not, as I have at this time forty-one full blood chickens in addition to my 127, making 165. I have hatched all of these but fourteen, which we purchased baby chicks. I have fifteen full blood Barred Rocks, Bradly strain, and twenty-six R. I. Reds, full bloods, both combs. But I think our record with scrub stock is remarkable, our eggs having hatched fine. One hen hatched every egg, fifteen; another hatched all but one with chicks in them. I hope by this time next year I can write you as good a record from our full blood stock.

GUARANTEED SUBSCRIBERS.

With each subscriber to our publication we positively guarantee, while his subscription lasts, that no advertisement is allowed in our columns unless we believe that any subscriber can safely do business with the advertiser, and we agree to make good any loss which any such subscriber may sustain by trusting any such advertiser who may prove to be a deliberate swindler; but we do not undertake to adjust trifling differences between subscribers and responsible advertisers. To take advantage of this guarantee, written complaint must be made to the publisher within two weeks from the date of any unsatisfactory transaction, with proofs of the swindle and loss, and within two months from the date when the advertisement appeared, and the subscriber must prove that in writing to the advertiser he said, "I saw your advertisement in the American Poultry Journal."

We Have Moved.

We have moved our office from Clinton street to a more central location. You will now find us right down town at 358 Dearborn street, just two blocks south of the post office, in the Pontiac building, on the thirteenth floor, rooms 1305-6.

This is a central and convenient location to find and we extend a cordial invitation to all our friends to come in and see us when in Chicago. We will be glad to furnish you with any information possible, and are always pleased to meet our readers and advertisers. On a clear day we can show you as pretty a view of Lake Michigan as you are apt to find in the city, as well as a grand panorama view of this great beehive of industry.

Where Can I Buy a Poultry Farm?

The editor of the American Poultry Journal receives many letters from poultrymen and parties desiring to engage in the poultry business asking, "Where can I buy or rent a poultry farm?"

There is never a week passes without an inquiry from some part of the United States reaching our desk.

Therefore we want everyone who has a poultry plant for rent or sale to notify us, giving a full and complete description in your first letter, so we can file same for reference, and be able to judge if your place would be what the party is looking for. Here is a list of what we want to know:

Number of acres, soil, drainage, nearness to town, condition of roads, mail and telephone service. Buildings and condition, house, number of rooms, large or small, closets, cellar, cistern, well, barn, size and condition. Poultry buildings, yards, dimensions and condition.

Incubator or brooder house, size and fixtures.

Number of head of poultry plant will accommodate. Income at present, how derived; commercial or fancy poultry. Your nearest market for commercial poultry. Express companies. Have you plenty of water. How distributed. Fruits and crops raised, if any. Fertility of soil. Stock, if any, the kind, etc. State best price and terms.

We feel we are in an excellent position to bring buyer and seller together. Let us hear from you at once.

Address Editor American Poultry Journal.

1855-1909.

We have lately received with the compliments of a friend a copy of Burnham's Hen-Fever, issued at Boston in 1855. We find on the title page our friend has written, "Human nature has not changed much in fifty-four years' time."

To date we have not had time to complete reading the book, but we have read enough to understand the nature referred to. This book is a great and humorous piece of work, dealing with the Hen Fever of 1849-1855. This was but the beginning of the fever known today as the Fancy. While our friend is to some extent right in his reference to the nature of it, we are still inclined to think and believe that the fancy has been greatly improved since that time.

What was then only known as the hen-fever has blossomed out into one of our most worthy and valuable industries. While this progress has been made and the poultry business placed on a par with any other of our great industries, its nature has also been changed to a great extent.

The question here is, can't we further change and improve this? Let us try. Let us bring the breeders closer together, and in particular the buyers and the sellers. We have often thought that at times there is a mistrust of one another that tends to keep many from entering in a whole-souled sort of way into the poultry business. We hope we are wrong in this. But if right, we here wish to assure them one and all, that from our long years of experience there is positively no just cause or foundation for such conditions.

The breeder of today has far more at stake than the average person imagines. The cost of growing his stock, his help, advertising, etc., amounts to big sums. We know of one whose expense for last year amounted to \$40 a day; and we believe we can mention others with a similar daily expense. These are great enterprises built on years of honest endeavor, and there is far too much at stake to allow of any questionable action or dealing on their part.

The buyer should consider and value this, and if he don't get all \$100 birds from a setting of eggs should be willing to take a chance and try again, for it is well worth it. The breeder is doing the best he can for you, and if you will confide in him no mistrust will or can crop in. Every breeder who looks to his poultry for an income should first of all be a member of the A. P. A., besides a member of the club representing his variety. Associations of this kind, along with a complete knowledge of the breed, will make common ground for us all and insure greater results and satisfaction.

H. P. Schwab.

"Well Bred" Fowls.

In a recent "Bulletin" issued by the U. S. Department of Agriculture they say they have learned "well bred" fowls pay better than those of no particular breeding. The chickens on a farm are usually cared for by the women folks, and if the good wife asks to have the hen house cleaned or the roof repaired the farmer replies he hasn't time, and if pressed is apt to run down the chickens, saying they only eat their heads off. While in reality they eat grass and grain that would otherwise be wasted, and their food really represents very little value to him.

And as the money received from an ordinary flock of chickens comes in from time to time in small amounts he does not appreciate the amount it would aggregate during the year, consequently he thinks chickens don't pay. Thoroughbred stock pays better than mixed breeds, and even they pay handsomely. A few figures from U. S. Government reports will prove this.

Not considering fancy birds, the value of commercial poultry was \$700,000,000 last year. This is more than cotton and cotton seed. Also more than the value of the gold, silver, potatoes and oats combined.

If you stop to realize this you should realize poultry pays, and thoroughbred stock, especially stock which has been bred to lay, pays best.

Therefore, if you haven't thoroughbred stock now don't lose a day in getting some; provide them with suitable houses, keep them clean and free from lice. Keep an account of the money received, giving them credit for the eggs and fowls you use for your own table, and we assure you the amount received will surprise you.

Did you ever stop to realize the amount of poultry and eggs you eat every day in one way or another. You know the women use lots of eggs in the cooking that you eat, and perhaps you don't remember you are eating eggs. Do you know you eat \$20.00 worth of poultry and eggs every year if you eat eggs or chickens at all.

We suggest you keep an accurate account and you will find you haven't a better investment than your poultry if

you give it one-half a chance. Besides the work is light and pleasant. By all means keep a flock of thoroughbred fowls.

Killing State Appropriations.

It is rumored that some states are killing their poultry appropriations. Kansas and Illinois are the states we have particular reference to, and though we have no positive news, we get our information from what are thought to be reliable sources. If we are not mistaken, Kansas and Illinois have been receiving each year about a thousand dollars to offer in the way of big premiums to get out the best class of poultry. The great development of the industries in these states really dates from the time they commenced holding good state shows where premiums were paid in full and on time and the best birds were brought out to compete.

Iowa has been working for years to get an annual appropriation and has not as yet succeeded, but she will if there is some means of getting pressure to come down hard in all parts of the state. Nothing but individual work on the part of fanciers will ever get an appropriation. This was true in all the states where appropriations have been made. It should be the duty of every state association secretary to keep well informed on how legislative matters stand which might affect the industry, and he can, by concerting the efforts of the state association members, get the results he should have in making the lawmakers see the poultry business in the true light.

To sit down and wait for the other fellow to do the plugging for your association is foolishness. Better be about it yourself and see that your neighbor is at it, too. Look over the industries of every state and you will see that the poultry business reaches higher up the column of totals than you ever supposed it could and then turn to the industries that are subsidized by state moneys and note how insignificant some of them are compared to the poultry business. The public, that dear people whom you will have to move, only appreciates your importance as you do. They place their estimate of a calling upon the same foundation that you do, and if you do not think well enough to make a liberal appeal for the industry of your choice or hobby then a far too low estimate is made of your importance.

Something Doing Down in Missouri.

They have jumped over the line again down there in Missouri. They have a habit of doing this down there. Chicken things must be right up close to the front or chicken people will not stand for it. The poultrymen of the various states which are refusing to grant money for the encouraging of the fancy and the poultry industry or are repealing acts that made the associations able to hold great shows, should go down there and have the breeders of that state show them how to go about getting what they want.

In Missouri a chicken man means a live one. They are men who get out and push their cause on the men who make the laws and they stay at it till things all come their way. Missouri

has a board appointed by the governor for poultry, horticulture, dairy, fish and game and agriculture. Each board has a secretary and he devotes his whole time to the work. This is true now of the poultry board which was given a regular annual appropriation of ten thousand dollars for the support of the work. The secretary will be appointed by the board to hold office until that board is removed and his salary is twelve hundred dollars a year from this time forth. The secretary, T. E. Quisenberry, has been the man at the helm during the last few years and now he is being pushed by his friend for the new appointment, where the salary will be more nearly commensurate with the work attached. He has been serving the board in the past, before the appropriation was received, and now that there should be an office created which will give him a chance to more fully demonstrate his ability as an organizer, he should have it. The secretary will be occupied hereafter in getting out poultry bulletins and in working along institute lines while the labor of the annual state show is off his hands.

During the past meeting of the legislature in that state, Mr. Quisenberry has been in attendance, working among the men who make the laws, doing his best to get the law passed, and he is deserving of the thanks and the hearty support of the breeders of the state. They are rallying about his work in great numbers and it seems to be a matter of but little time till we will hear that he has been again appointed to fill the secretary's office under the new order of things chicken in Missouri.

That nothing will make the industry in any state grow faster than the regular institute work of a good, live man, is well known. From the facts and figures about Missouri poultry products compiled in the past by Secretary Quisenberry we know he is the best posted man in his section. And it is a great treat to listen to his annual report of the condition of the industry in that state.

Missouri breeders who have not as yet petitioned the poultry board to retain him as the secretary should do so at once. They have a good man in the office and should endeavor to keep him.

American Poultry Association Annual Election.

At the annual election for the year 1909 of the American Poultry Association the officers elected as shown on the face of the returns are as follows:

Charles M. Bryant, President.
L. H. Baldwin, First Vice President.
C. K. Graham, Second Vice President.
S. T. Campbell, Secretary-Treasurer.
George D. Holden, Executive Board.
David A. Nichols, Executive Board.
E. E. Richards, Executive Board.

The candidates received votes as follows:

Charles M. Bryant, President, 894.
L. H. Baldwin, First Vice President, 854.
C. K. Graham, Second Vice President, 614.
O. L. McCord, Second Vice President, 291.
Geo. O. Brown, Secretary-Treasurer, 178.
S. T. Campbell, Secretary-Treasurer, 441.

Chas. H. Ring, Secretary-Treasurer, 254.
Geo. B. Weimer, Secretary-Treasurer, 38.
Harry H. Collier, Executive Board, 385.
C. W. Fowler, Executive Board, 219.
Geo. D. Holden, Executive Board, 489.
David A. Nichols, Executive Board, 513.
Russell F. Palmer, Executive Board, 243.
E. E. Richards, Executive Board, 476.
E. G. Roberts, Executive Board, 88.
Eugene Sites, Executive Board, 266.
FRED L. KIMMEY,
Election Commissioner.

Live Wire Sparks.

The fact that one or two "scraps" have crept into the poultry world in which our friend Grant M. Curtis did not get his foot in it, seems to worry him considerably, judging from his lengthy editorial in April R. P. J.

Perhaps there is time yet for him to get in and make a few feathers fly. We would advise caution, however, as these "Reds" are excellent "scrappers," and it is possible some gore would be spilled if Grant were to take a hand in it.

By the way, Mr. Curtis, there is another scrap on, besides the De Graff-Tracy and Hatch-Crandall controversies. J. H. Robinson also needs your assistance, as Mrs. Frank Metcalf has the fighting and scratching fever and wants to get even with Robinson for a virulent article he wrote about the Buckeyes.

Mrs. M. says while she went to California for her health, she is "so as to be about" yet and will "see him" at Niagara. She has Mr. Robinson on the run, and he has advertised for a "guaranteed cyclone cellar" to be delivered in ample time, so he can crawl in the hole and pull the hole in after him.

Mrs. M. seems to recognize the fact that the Reds are becoming so popular and so many of the members of the A. P. A. are now breeding them that it is possible half the meeting will be red, more will be red hot, and the proceedings will be read by all.

But for all that, we "Red Men" don't want the name of the A. P. A. changed just yet.

Missouri Does Herself Proud.

It is with pleasure we learn that the Missouri state legislature appreciates the importance of the poultry industry and has appropriated \$10,000.00 for the Missouri state show, out of which a secretary is to be employed who is to devote his entire time to the office.

The people are certainly progressive down in Missouri and are recognizing the fact that the poultry industry is the greatest one they have, and are encouraging it in this substantial manner.

Other states should follow suit and also make similar appropriations. No one can estimate the "good" this money rightly spent will do in educating the people in the state to raise more and better poultry.

Missouri can well afford (or any other state for that matter) to spend this money, for we find for every \$1.00 she has spent in the past, at her experimental station, she has produced

\$17,840,623.00 worth of poultry, and for every \$1.00 spent in dairying \$418.00 in dairy products has been produced, and for every \$1.00 spent in horticulture \$132.00 has been produced. In other words, for every \$1.00 spent in furthering the interest in poultry in the state she has produced 42,680 times as much money in return as the dairy has, which is her nearest competitor.

These figures are truly startling, even to those familiar with the poultry business, but the fact is we have by far the greatest money producing industry in the country. It is because the money received from poultry is mostly received in small amounts that we don't realize what it would aggregate. We must also remind you these figures do not consider "Fancy Poultry," at all, as we have no way of knowing what that would amount to, but certainly as much if not more than commercial poultry.

Missouri is to be congratulated, and we think the old saying, "I'm from Missouri and you'll have to show me," should be changed to "I'm from Missouri and we'll show you."

Much good has already been done, the surplus poultry products of the state have been increased over \$12,000,000, and with this appropriation, out of which a secretary of the Poultry Board is to be employed, who will devote his entire time to the office. It is also the intention to hold institutes, issue bulletins and promote the interest in poultry throughout the state.

Let us hope other states will do likewise. And you, Mr. Poultryman, should get busy, for everything has to have a beginning, and one man began this, and while it is true lots of good loyal breeders have stood by him, helping on every hand, but T. E. Quisenberry started the ball a-rolling.

It requires a good man to push this work along and the untiring efforts of Mr. Quisenberry should be recognized

and rewarded by making him secretary of the new Poultry Board.

He could then continue the good work he has commenced, and no one can prophesy the amount of good he would do. Assuredly he is the "right" man for the place.

The American Poultry Journal congratulates the State of Missouri.

Does Commercial Poultry Pay?

This question has been asked us by a young man in Brooklyn, N. Y., who has planned on going into the commercial poultry business.

Yes, certainly it pays, if it is handled right, along business lines.

Can you doubt it when the commercial poultry products of this country amount to over \$500,000,000 annually?

Do you suppose all the people who are producing this vast amount of poultry and eggs are doing so at a loss? No, it would be unreasonable to contemplate.

Furthermore, poultry and eggs are coming into general use more and more every day. Did you ever stop to think how many eggs you eat every day in one form or another. Get the women folks to tell you how many they use, including all baking, pastries, etc., etc., figure it out and it will surprise you. Then figure out how many hens are required to keep you in eggs, and if you want some figures that will make your "hair curl" figure how many eggs are consumed in your city per day and the value of same.

Small flocks of commercial poultry are made to pay a net profit of \$2.00 and even more per hen. In large commercial plants, where there are more leaks and more loss, this is cut down to \$1.00, and even as low as 50 cents profit per hen. A great many things might cause a failure in a commercial plant, but that is no reason for saying

poultry don't pay, for the fact remains poultry does pay, and there are people making it pay. The fact that 90 per cent of the people who engage in mercantile enterprise fail does not prove that the people engaged in the mercantile business are doing so at a loss.

However, we would advise anyone wishing to engage in raising commercial poultry for a livelihood to first get a small flock as a side issue, while following their regular vocation, keep accurate account of expenses, and when you can make this pay then you can drop your regular business to take up raising poultry exclusively.

However, if while you are doing this you will look into the profits to be made in breeding "Fancy Poultry" you will learn it does not cost any more to raise a fine bird for which you can get five to twenty-five dollars than it costs to produce a commercial chicken you get seventy-five cents or a dollar for.

Then, again, you can figure how much more profit there is in it for you to get two to five dollars for fifteen eggs than forty to fifty cents per dozen.

As far as being able to produce fancy stock is concerned, anyone who has the ability to raise commercial poultry successfully can with a little study raise fancy poultry successfully.

Even in a commercial plant you must have thoroughbred stock, because they have been bred with superior laying qualities.

If you love poultry you will by watching and studying them soon learn to know a superior bird when you see it and if you don't know how to mate your birds to produce them you can employ a poultry judge for two or three years to come in and mate up your birds.

Attend the poultry shows and talk to the breeders, you will find them willing to talk about their birds, they all love them.

And let us say right here, you will find as a class the men engaged in poultry raising are big-hearted, whole-souled fellows, always ready to assist a brother fancier.

You won't find a finer class of men in any walk of life, for it takes a man of intelligence, with kindness and love of his animals in his heart to be a fancier, and you won't find a man like that an enemy of his brother fancier.

The raising of poultry, particularly fancy poultry is an elevating, ennobling business. Much more could be said on this subject, but we refrain from doing so. You will find several other articles elsewhere in the American that will cite you to the amount of money represented by the poultry industry.

Standard Calicoes

Our grandmothers wore Simpson-Eddystone Silver Grey cotton prints. Our mothers are wearing them today. Ask them about quality—how they wear and hold their color. Let them show you the neat stylish patterns.

Quality was paramount in grandmother's time. The same today in Simpson-Eddystone Prints.

Standard for over 65 years.

Ask your dealer for Simpson-Eddystone Prints. If he hasn't then write us his name. We'll help him supply you. Don't accept substitutes and imitations.

The Latest.

"Necessity is the mother of invention," so they say. It seems two Wisconsin poultrymen were troubled with egg-eating hens, so they put their heads together and invented a band to fit over the back of the hens, with an attachment which registers each egg as laid. It is operated by the expansion of the body when the egg is expelled.

Claims are made for it that you can detect the egg eaters as well as the drones.

We cannot see much use for this invention, as we have the Potter and Hogan systems to detect the drones with, as well as all kinds of trap nests and for our part we don't see how it will locate the egg-eater unless you watch for her. If it did this it would be a good thing. However, this is surely the "latest," and we wonder what they will do next.

**Are You Going to the A. P. A.
Meeting at Niagara Falls
Next August?**

It is your duty as a breeder to go. It is to be a very important meeting. The report of the revision committee will be submitted and many other very important matters will be brought up.

Better make your plans now to be there; you know we have the greatest live stock industry in the country and our meeting should do justice to it.

Your time and money will be well spent. Come and be one of us.

Notes From Everywhere.

The league of Pennsylvania poultry associations is growing and before the show season comes on we shall give readers a correct idea of the circuit and each show's dates. Illinois has also formed a league and given dates to the show associations entering. This was accomplished at Galesburg on the 21st day of April. Particulars all in due time.

Among poultrymen-fanciers who are now sojourning in Europe are Mr. E. G. Wyckoff and Mr. Henry D. Riley, both well known throughout the east. They are enjoying a few good shows in England, France and Germany.

George Fisher, of St. Joe, Mo., picked 2,900 chickens in one 12-hour contest against time. He is the world's champion.

A Review of the 1908-1909 Season.

The Shows and the Evident Progress
Noted—Our Best Endeavors Prom-
ise Greater Results for
the Future.

By H. P. Schwab.

The poultry season of 1908-1909 is past, and as its several features impressed us and have been chronicled ere this, there is still a sort of comparison due, that is so evident, to attract attention, both special and otherwise. It was our good fortune to attend several of the leading shows, and having made the same shows in the past, we could not help but note the constant strides of improvement made each year. This past season in par-

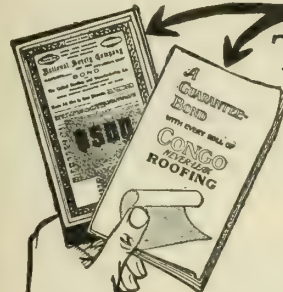

ticular, and all along the line, this improvement was so evident. It was also our privilege to represent the A. P. J. and visit several of the leading eastern breeders, to study their matings and to write them up as seen.

All this has been done, and while space at this time won't permit a detail review of all classes, we will take just enough for a short comparison, or rather mention the particular features that impressed us most.

I believe that but few of our American breeders know the value of the "Ontario." This is Canada's big winter show held at Guelph, Ont., in December each year. This is their one big effort, and an ideal one. The classes shown here abound with quality, and it would be to our breeders' advantage to

investigate and to try conclusions with our neighbors. They are grand fanciers and true sportsmen, and if shown are sure to invest, to improve their stock when and where they can. We have found there each year from 4,000 to 5,000 entries, and at the late show in particular a quality as good as the best, with this mammoth entry, large classes are the rule. One feature of this show is the display of dressed poultry, of which there are yearly from 300 to 500 shown. The interest here created is evident, and I must again say that it is a department I would like to see at all of our shows. Its advantages are many, and it adds particular interest to the practical side of the question.

New York was larger and better than

THE GUARANTEED ROOFING- CONGO A SURETY BOND with every roll

Congo is the only Ready Roofing carrying the National Surety Co's. bond. It carries with it terms and conditions that make it especially attractive to anyone who must consider the roofing question.

For 10 years you can rest easy about your roofs if covered with 3-ply Congo, and we know that it is probable you will get even longer service out of it.

usual. Here each year improvement is noted. This is the show that attracts all of the great birds of the continent. This year the classes were filled with a quality that made the picking for the judges a task of unusual severity. The Barred Rocks were the largest class, all the great breeders being in line, making a display that in size as well as in its uniform high quality was a revelation to all who were fortunate enough to attend. The White Rocks, the White Wyandottes, the White and Brown Leghorns, the Orpingtons, R. I. Reds, etc., all were unusually strong classes, with greatly improved quality the rule as well as the feature.

Boston followed closely. Here also large classes of the leading varieties were shown. The value of the Boston specials is very attractive. This, with its liberal and competent management, is bound to tell and to ever increase its value to the exhibitors, and prove popular to all lovers of fine poultry. Several features are put on here, each worthy of consideration. One is the decorations of the display cages, another is the rare collections of game birds. But best of all is their veterans' day. The east has many veteran breeders and in our write-up of the show we gave this special mention. Philander Williams was in line there. We little thought at that time that it would be our last opportunity to visit with this dear old friend.

Philadelphia has now held several shows. We have attended the last two, and here we find progress made that has won for this show a safe place among the best. The class of its patrons assures further success. The management did itself grand, being competent and, above all, made up of true fanciers. Here again the classes were well filled and the quality up to our every expectation. The premiums as well as the specials are most liberal, and they now have a hall in the center of the resident section that is one of the largest and best in this country for a poultry show.

Cleveland puts up a fine display and the value of its awards is evident. Here we find the breeders of several states competing for the honors, which is sure to bring out the best quality. It takes exceptional birds to win nowadays, and we could not help but wonder where they all came from. The Plymouth Rocks, Wyandottes, Leghorns, Orpingtons, etc., are as popular here as in the east. Cleveland has the knack of drawing the people, and its stock must be way up miles above par. They tell me Gene Sites is the drawing card and I begin to believe it is true.

We should here also give Buffalo its due and place it in the same class of shows. They also have a grand hall and the people with them. This insures business for the exhibitors, and that is what they are after. A win at Buffalo means something, and by this value its future is secure.

Here are mentioned some of the principal shows at which we had an opportunity to make a close study of the classes and to note the quality of the exhibits. Each has been written up ere this, and the mention we here make is but a comparison of what we have seen at the same show in other years. The progress made, as well as the improved quality shown is so evident that but little if any further reference is necessary at this time.

If we combine all these shows and se-

lect one feature for comment it would be the increased interest and larger entries of the good old varieties of years ago. This season we have seen larger classes of Brahmas, Cochins, Andalusians, Langshans, Hondas, etc., than we have seen for ten years or more. All these varieties have merit, and as the fancy has plenty of room for all such, it really did us good to note the fine displays of these at each of the mentioned shows. They came out not only in good numbers, but with a quality that again made real competition for those exhibitors.

Since the show season we have also made a hurried trip among as many breeders as our time would permit. We have seen their flocks of breeders as well as their show birds, and from all this we can only wait and hope for the next season to see the results. Great as have been the strides for better poultry in the past, the future holds out many new hopes, and I am most willing to state that the future progress is bound to far excell past accomplishments.

Go where you will, increased interest is evident. There is a boom on that is bound to stay, and success is the reward awaiting every persistent fancier.

"THERE'LL BE A HOT TIME."

The A. P. A. meeting at Niagara last year promised to be a warm one, but this year it promises to be a "scorching." The band will please play.

O. L. King, of Rockford, Ill., the Barred Rock Breeder, called on the American Poultry Journal the other day. Mr. King has been a satisfied advertiser in our journal for the past eighteen years, during which time he has bred and sold many fine Barred Rocks. He reports about 200 fine chicks coming along for the fall and winter shows.

WHO'S WHO IN HENDOM

3.—The Judges on Trial.

Old saw:
"A little nonsense now and then,"
etc.

It's pretty clever all the same, this judging business.

A fellow raises a lot of all kinds of chickens, and some Cain along with them, does a little free advertising in the county papers and folks call him a chicken judge. He cuts quite a figger at home, so he hangs out a shingle that costs him six bits and along comes some good association secretary who takes pity on this showless judge, sends him ten dollars to get to the show with, lends him some local information when he gets to the show about this man and that and their tempers and the amount of mazuma they have contributed to keep the association alive and the prizes they didn't win for the last two years, takes Mr. Judge's cleaver out behind the livery stable and with a brick rasps off some of its edge, then gives him the score cards and tells him to do his best. Best, mind you. Remember I said the edge was taken off with a brick.

Well, as I was about to say, well, the judge does his best, which is not saying much for a fellow's first attempt.

Ask any of the boys, they'll be honest with you.

Until the chicken judge gets his bearings and fully understand that old and reliable guide, Acting In The Show Room, I mean Judging in The Show Room, but then it's all the same thing, he is kind of nervous like and hardly knows where the ribbons are going to fall.

It is twice as hard as writing down a detective story with Barred Rock in the title role, is this scoring. In writing you have everything down in front of you, if you haven't lost some of the sheets of copy as they pass over the tympan of the typewriter, neuter gender, but in scoring, as I was saying, the clerk has the part that has been written down, or up, according to the bird's ability to show its feathers and preen itself, and you are too bashful to ask to see the card lest the clerk tell the boys that you are getting rattled.

I said it was twice as hard, but some of the boys will tell you I am not there with the mathematics, as they know from experience it is worse than this.

Some of the advance guard will tell

you that they have never been more uneasy than when being asked why they "cut" thus and so, and thus and so. They go ahead with a lot of talk that nobody understands about the relative proportion of the section to the ratio that this one has been cut on this bird, and then when the explainee gets into the intellectual quagmire he backs out and takes it for granted that the explainor knows what he is explaining.

You see, a fellow who is really great in the head often says he don't know, when he faces a problem that is beyond him. But a chicken judge gets right in deeper and invites drowning by trying

White Plymouth Rock pullet, showing the type of birds in the breeding pens of W. R. Graves, Southboro, Mass.

to make explanations that do not explain.

Some judges have gained great and wondrous careers as judges of fowls simply by their strong line of talk that nobody gets heads or tails of. I have often thought that the scale of points in the Standard was there for the simple purpose of giving a judge something to hide under, like the baby chick that scurries for its coop when the crow or bluejay flies over.

Many of those who follow this nefarious, whatever that is, practice really believe they have reduced their work

to an exact science. If one can truthfully call a science the ability to get their work down to a point where it cannot by any means be understood, then they have succeeded. Webster, the Dictionary Man, says that science is classified knowledge, and leaves us to coin our own word for classified piffle. And the judges, taking their cue from what they would have us believe cast the labor of such coinage and the operation of the mint on our shoulders, we, the Common Chicken People Give Them Bread. Of course, if we must, we must bear the burden without whimper.

But we cannot get along without them.

From some of the old works on chickens I have it that judges were here before the chickens. But we won't argue this. It is about as old a chestnut as that one Tom McGrew springs at all the banquets, where he bursts forth in grandiloquent and magnanimous praise of the feminine element in the fancy, the story of which came into being first, the egg or the hen, eggs actly. And then Tom explains that as the egg has no being, the hen must have been it.

Judges may be divided into three classes: Those who know a chicken when they see it, those who draw their money (if the association is not bust), and those who make for the train immediately their work is over—like the judge of a cat show who is not afraid of the cats, but of the exhibitors.

Let us make a little row of dots or periods, as the novelists do when they want to give something time to soak in. . . . It will give us time to reflect, though of course there isn't much to soak in when writing of judges, but let's pretend, nevertheless, just the same. My typewriter needs oil anyway, and I need a breath of fresh air. Please open the door, Mary.

Catching stride again, let us consider the judge who really knows chicken and who don't mind pointing it out, fearless of what the other fellow will think. This judge is a type, indeed, is very rare, found seldom in the show room, but when it is, is caught and bound and made to give forth the knowledge it conceals in that vast dome of thought. He rather draws men, strong men, to him, while the little minnows of the puddle all carp and pass the ice. Being largely guided in his work by first impressions, he generally is correct in his conclusions. He was a fancier and a chicken man when he

CHARCOAL FOR CHICKENS

Feed your fowls Charcoal; it keeps them healthy and in good condition. Prevents diseases; destroys all foul odors; absorbs gases, acids, etc. You will get better results and bigger profits. All successful poultrymen feed Charcoal to their fowls. **Indian Brand Charcoal** is the finest made, unadulterated, and prepared by special process. Sold in 100 pound lots and upward. If you can use 500 or 1000 pound lots, we can quote prices away below all others. Write for our booklet, Why Fowls Need Charcoal; SENT FREE. It explains fully the value of **Indian Brand Charcoal** for poultry. WRITE US TODAY.

was just old enough to have strength for totting Aunt Martha's feed pails, when we were boys together, down on the farm.

This species of judge is not numerous, as I have said, and there seems to be no method by which we can increase the output. They happen. You cannot produce them by any known means of propagation. Being like the grand old breed of Plymouth Rocks, the best of them spring from whence they are least looked for, and no method of mating has hit on making them more plentiful. Master minds have tried to solve the problem of raising the percentage of show birds among judges and near judges, but so far all have failed and exhibitors are prone to bewail the fact.

One of the sure signs of a judge who knows chicken is that little fanciers are against his decisions. A judge of this variety places the awards without once referring to the pet hobbies and

But let us leave this species and trudge on, seeking what the future has in store for us.

Those who draw their money, a queer subdivision one may think. But they are a constantly encroaching menace, and will be for a great length of time if Peggy is allowed to be shown by many of the associations, thus increasing the "gate" and making it possible for the men who look knowingly and walk airily up and then down the alleys, to draw their stipends after their arduous labors. Given the prospect of a good "gate," a long line of birds and a clerk or clerkess to tag at their heels, and this species is at home. The poet hath said:

"What lordlier air, what nobler mien."

And it absolutely and without question was written with a poultry judge of this same species in mind. Some will question this, but truth ever stands.

Black Orpington hen. Bred and owned by Brown & Coleman, Station L, Cincinnati, Ohio.

foibles of breeders who are too close to their work to get the true perspective. In going down the aisle where the original mongrels, Barred Rocks, are on dress parade, one notes the line of thought indulged in by all breeders and noting what they have to say, one makes a still further note that they are about as agreed on their ideas as antedeluvians would be in trying to figure out a crap game. But along comes the judge, I say judge, not near judge or thinks he is a judge, and he weeds his way, to say nothing of wending it, right in to the best birds, tossing over his horns or his class book, all the little things that might be properly termed technicalities. This is the one sure sign. You can depend on it, the fact that the moon is newish and setting a little to the north in the sky, to the contrary notwithstanding, nevertheless. Our judge is long on chicken and short on hobbies, and this makes some dissatisfaction sure to rise heavenward if it issues from a man who explodes before his charge reaches the proper compression point.

Just what series of conditions and circumstances produce this species of judges is more than any man hath dared to set finality to, but we know what we know. That once having been down to date in their specialties, they must have been lending their ears to flatterers, for they seemed to rest on their oars, permitting a nautical phrase, deeming it for the best interests to let well enough alone. This often happens in everyday life and is only additional proof that fact is more strange than fiction. Let a judge once get it into his too wooden block that he is the big IT and he ever after adheres to those views that "made" him. He cannot get away from them. They are his life buoys, his guiding star, his piece de resistance. He refuses to readjust his halo. For fear that his glory will wane he stands by his guns, never going to mess when the bugle sounds. If perchance, he should get caught out in the rain of other theories and set knowledge his glory wanes. But he sticks to his points that have made him famous like a tick to a maverick, and worse yet, Mary, he refuses to change

their clothes. To search for more knowledge on his part would look heretical to the ideas he had previously expressed, so he continues to bathe in the glory he has accumulated or appropriated and show managements do the same, as they go on letting him rest a mit on the strong box from year to year while progress goes merrily on. Is not merrily the right word?

And younger men, with views and ideas found to be facts in practice, are forced to stand waiting for their chance to declare that a pullet banded with the English Cornish Indian Game Club '08 band is a hen, even if she is shown as a pullet in Chicago during the last month of the same year. Do not scoff at this or I will make another little row of dots, and then when it has had time to percolate through to your storm center you will see the full meaning of what I have hidden under the brush pile of words, and then, as the light breaks through, you will dramatically vociferate, "I see it now as I have never seen before."

Years ago, when the fancy was not as opulent as it is today, we had fewer

First prize Silver Wyandotte pullet at Columbus, O., 1908. Bred and owned by Ira C. Keller, Prospect, O.

of this species. The lure of the show room has seemed to breed them, however, and today they are plentiful. It has been said that they thrive in a soil that is well cultivated with the claws of the American eagle, and that silver tongues were found among them which sought to hold down berths as near judges in shows that make for national prominence (though nothing has dared to be uttered about their antics in the chicken shows of county fairs).

Where associations are under heavy monetary strain (hope this is correct financial parlance) and the strain is liable to develop into a fracture, this subdivision of the fauna of hendom finds the browsing exceeding poor. One can make a bluff at judging gallus bankiva, but when one wants to draw money for labor, or acting, bluffs have no cash value. Even when endorsed they are not bankable. Ninety-eight per cent of the class under consideration have their mental association ratings overhauled annually, and you'll

ONE USE FOR A PICKET FENCE

THIS picture shows how one woman used her picket fence to dry the disks from her "bucket bowl" cream separator. She realized the work of thoroughly washing a half bushel of disks twice a day, but she did **not** know that the simple Sharples Dairy Tubular would **save** that work and give better service, or she **never** would have let her husband buy a disk machine.

"Bucket bowls" are **not** modern. Disks or other contraptions make them unsteady, complicated, heavy, hard to clean and short lived.

The **only modern** bowl is the light, slender, simple Dairy Tubular bowl, hung below its bearing and fed through the lower end. Our patents prevent imitation, so others still make "bucket bowls" out of date years ago.

Tubulars are made in the world's greatest separator factory. 1908 sales way ahead of 1907—out of sight of most, if not all, competitors combined. Get catalog No. 205.

The simple, light Sharples Dairy Tubular bowl is easily washed clean in 3 minutes. A few thrusts of the brush does it. Better than spending 15 to 30 minutes washing a "bucket bowl."

LAKEWOOD FARM NUMBER TWO

¶We wish to announce to our friends and patrons that we have purchased at Eatontown, N. J., a farm of 170 acres, and will there build, equip and run in conjunction with our farm at Lakewood an up-to-date breeding establishment, devoted exclusively to the breeding of the Lakewood Farm Strain of Single Comb White Leghorns.

¶We have also increased our land holdings at Lakewood and will greatly enlarge our Lakewood farm.

¶With our new equipment we will have housing capacity for 30,000 laying hens; incubator capacity for 60,000 eggs; brooder capacity for 51,500 chicks. Our incubator and brooder systems will be novel in the extreme, as they are heated by hot water controlled by a coal furnace, manufactured by the Hall Mammoth Incubator Co. of So. Columbia, N. Y. This equipment has been thoroughly tried out by us and the results we have obtained this season far exceed our most sanguine expectations and make possible the production of eggs and poultry in large numbers.

¶General offices have been opened at 517 West 23d St., New York City, to which address all business communications should be sent. We invite all who are interested to call upon us when in town. We further extend to the general public the hospitalities of our farms; letters of introduction will be given to you from our general office to to our managers at the farms.

New York City, May 22, 1909.

HIGH GRADE POULTRY PRINTING

Quality counts in the printing you use as well as in the breeding of your birds. Everything in printing for the poultryman, with high-class cuts for all varieties of fowls. Samples and prices on request.

RICABY & SMITH, Benton Harbor, Michigan

White Rocks Ply....

If you are looking for White Plymouth Rocks that have large size, chalk white plumage and ability to lay eggs in winter. Let us quote you prices.

Temple & Merriman, Rte 5, Gouverneur, N. Y.

not find them making errors by signing contracts for shows where they might have to count ties out of town.

Journeying on up the Hill of Despair, we come to the third lot of would-be judges. 'Tis a sad, sad tale, Lucreece, but let us have done with it. They have excuses galore, dates mixed, another show the same week, must get home to ship a pen of birds to a customer for Gadison Mare Squarden, been feeling poorly and must go home as they know a siege of grippe is making for them, etc., etc.

Let us follow the trail of one of the thinksheisa judge judges as he scores for a show. Leaving the main line, he catches the way freight that makes connections with the limited for Henville, where the show is going on, rather where the boys are getting them in out of the trees, and forty-seven Toulouse geese and a hundred and six bronze turkeys await their turn to be given the card, these in addition to seven hundred fowls of every hue and cry. Of the conductor freight wrestler he gets the correct hour of departure of both locals that go north.

Alighting from the rear of the caboose day-coach he saunters up to the deepoe and looks about for a wagon hauling a belated shipment of birds from anywhere to the show room. He keeps a sharp ear open to hear a cackle or the squawk of some fast-growing cockerel that sounds as if it came from a lodge hall or an opera house, the windows down the least bit from the top. Seeing and hearing nothing and about ready to decide that he has hit the wrong burg, he at last sees a couple of men going across the street, about three squares up, carrying a slatted dry goods box with a crazy Leghorn hen trying to tear her head off in her frantic efforts to escape the judge's score card, and who could blame her? He runs the three blocks and catches sight of the men as they disappear up a dark and dank stairway, but you can gamble on it, Esmeralda, and it is far safer than a bridge bet, that he has noted all the short cuts to the station and sought out the largest hotel during his spurt of speed.

He sets down his grip in a dark corner of the entry way and takes a stroll about, catching his breath as best he can, which isn't much, as he has been feeding too heavy all winter. No one seems to notice him, as it is Monday morning by the calendar and the gatekeeper has not as yet put in his appearance, and the crowd will positively not come till it is announced from soul to soul throughout the town that the judge is on exhibition as well as the birds. One of the boys in the show room has seen his pictures in a poultry journal and knows him, or thinks he does, so he goes to tell the secretary, who immediately hunts up Mr. Judge and makes him acquainted with the officers and men at hand.

At two of the clock he goes into a back room and gets inside his duster, while perhaps a few of the women exhibitors who may have foregathered to help their pets bear the unjust cuts given them, declare "he is just too sweet for anything." Well, maybe he is. He begins with the Rocks and works fast and late. The show looks big and he must make tracks to Duckville as soon as he is through, but he aims to so time his departure that he will have finished about twenty minutes before

the train runs back to the main line the following day. At night he gives the hotel clerk strict orders that he is not to be disturbed, as he knows that some exhibitor will pry his way into his room for a three-hour explanation of how the chicks turned out that came from the setting of eggs he sent him for eight dollars. He is tired and must have his rest as his head must be clear and his brain active.

In the morning our hero is pointed out by the proprietor as the chicken judge to all his regulars, and they keep glancing his way to see if he is made from the same pot of clay as the rest of them. If he is an old-timer he sets himself soon at ease, jotting down expenses, for he calculates to save 90 per cent, but if he is a new one he gets out a few cards and totals them while his breakfast order is being made ready in the imitation English kitchen. Out in the lobby the landlord asks him how the chickens are coming along, for landlords know everything; and again, if he is a new one he launches out into a story of how he became a judge. Going down the street they look out at him from the barber shop and he knows they are saying, "He knows his business, all right, all right, for he works so fast and never goes back to see what he scored them."

At 5:15 his train jerks its way back up the hill and he finishes the last turkey at 4:49. Then he rushes into the secretary's office, and having all along kept them posted on his hour of departure, gives the secretary his cards and, getting his check, goes rushing over to the bank to have it cashed, taking Sec. with him as identity, shakes hands, starts for the station and finds he just has time enough to buy a ticket and get a seat.

Secretary goes back to his desk and opens it, tolls off a certain number of men to act as totalers, not teetotalers, and then they wade in to rescue the birds. Incidentally they find many ties and in deciding them they frequently wish they had the judge back there to have a little necktie party with him. I have not tried to overdo this tale, making it just as near the facts as I possibly can. In fact, it is hardly possible to get beyond what conditions certainly are. Judges are a great institution and this subdivision the greatest of the great.

It will be impossible to keep the fancy going without them and we must accept them as they are with all their frills and furbelows. Try to conceive of a fancy without them and you fall into a bottomless pit where all in the business would be chaos indeed. We have said our say, have yearned for years to get it off our minds, and now we feel better, and you should, too. If you and I get a bit of amusement from contemplating the fact that we cannot get along without them, the judges themselves will not care a rap. We have painted the picture and varnished it, and hung it in the salon, and you can do with it in awarding the prizes, just as you see fit. The best oils and colors in our shop have been daubed upon the canvas. We are done. . . . Please accept the dots.

There is no business we know of that is a succession of "little details." They all require "watching," otherwise the greatest success is not attained and possibly failure results.

Questions and Answers

Questions asked by subscribers will be answered in this department only under the condition that the full name and address is signed by the writer

Question.—I have sixteen hens about a year old and two roosters, but don't get any eggs. I feed them bran mash and wheat in the morning and wheat and corn in afternoon and liver every other day, but don't get more than one egg a day. Do you know the cause of this? W. L.

Superior, Wis.

Answer.—Your fowls are probably lousy. A lousy hen cannot lay, and the feed you are giving them goes to the support of the lice and not to the production of eggs.

Question.—(1) Is it true that fine layers, doing their best the second winter and strong and vigorous, should not be kept a third winter for producing eggs for market? So far as egg production is concerned, shall I send this flock of two-year-olds to the block as soon as their summer work is done? They are White Plymouth Rocks, raised by myself and have rendered fine service. Now, does all experience show that they should not be kept longer than fall for egg production? (2) In a fine vigorous flock, well cared for and kept clean, is gapes ever a serious or fatal disease? (3) In making lime water, how long may the lime placed in the vessel be used to pour water on to be drawn off to put in drinking water? (4) Is it a usual thing that cockerels hatched from costly eggs of a famous standard bred strain of White Plymouth Rocks should have only two out of ten with five points to the comb, while the eight range from two to six points? While pure white with good Plymouth Rock points in all other respects, will it be unsafe to breed from any but the five-pointed combs?

J. M. W.

Fort Atkinson, Wisconsin.

Answer.—(1) The breeder's judgment must govern his actions in this respect. As a rule hens do not prove profitable as layers after the second year; but where fowls are bred especially for egg production they very often prove profitable the third year. When necessary to dispose of them it should be done in the early fall. (2) Yes. (3) The line should be used only once. (4) The percentage of five-point combs in most varieties is very small.

A bird good in all other sections should not be discarded as a breeder because not perfect in comb.

Question.—(1) What is the best kind of poultry to keep in town. (2) I have a park twenty-two feet wide by sixty feet long. How many hens can I keep with good results? A. E. H.

Gaston, Ind.

Answer.—(1) Any of the American varieties such as Rocks, Wyandottes,

LYMAN H. HILL,
Well-known Breeder of White Plymouth
Rocks, Jackson, Mich.

Rhode Island Reds, etc. (2) About one hundred.

Question.—(1) What is the cause of eggs starting to form and then spoil before the chick starts? (2) What is the cause of so many chicks dying after five or six days' incubation. (3) How can I save chick that cannot get out of the shell at hatching time? (4) How high will the thermometer have to get before it will spoil the eggs, and how long will it have to stay there? (5) Does it make any difference in setting four or five different kinds of hen's eggs in an incubator at the same time? T. V. D.

Stamford, Tex.

Answer.—(1) This is caused by the germ starting to incubate and then dying from some cause. (2) This is due to various causes. Sometimes from too much or too little heat, or caused by breeding from diseased or immature stock. (4) From 108 to 110 degrees for three or four hours. (5) In selecting eggs for incubation they should be uniform in size, and, where possible, of the same variety, as Wyandotte and Leghorn eggs do not hatch well if placed in an incubator together.

Question.—(1) Do thoroughbred Imperial Pekin ducks lay green eggs or creamy white eggs? (2) If they lay eggs of both colors, which is considered the best? (3) Should ducks be picked while still laying? (4) Should young ducks be picked while growing? (5) Can the sex of Orpingtons be determined at an early age? (6) Some Orpingtons at three or four weeks of age have tails about an inch long, while others do not. Are all thoroughbred, or does this show the sex of the chick? (7) What are the necessary steps to become a licensed poultry judge? J. K. P.

Cowgill, Mo.

Answer.—(1) Both. (2) Color of shell has nothing to do with the quality of the egg. (3) No. (4) No. (5) As soon as the combs develop. (6) This is no indication of the breed or sex. (7) Learn how to judge and then make application to the American Poultry Association for a license.

Question.—(1) I average about 21 eggs from 32 hens. Most of them one and a half years. Is that fair laying? (2) How many hens could I keep on an acre of land? (3) Have one hen sick. Have taken her away from the rest of them; something wrong in her throat. What is the matter with her and what is the cause? W. J. S.

Newport, Mich.

Answer.—(1) Yes. (2) This all depends on the care given them, but with good care, 500. (3) We are unable to say, as you do not give enough details.

Question.—I have 50 pullets in a yard 30x60 ft. Now, can't I save feed, but will I get as many eggs, if I put them in a grass lot of one-half acre?

Bloomington, Wis.

H. C. B.

Answer.—You will no doubt save feed and get a better egg yield.

Question.—I have a pen of Single Comb Brown Leghorns that have been laying very good all winter and are still laying. Some of them have all the feathers coming off their heads just back of the comb, and one or two have some of the wing feathers near

How to Build Poultry Houses

A 64-PAGE BOOK

Devoted to the construction of poultry houses and fixtures, brood coops, etc. This book gives plans and specifications for building all kinds of poultry houses, brood coops, nest boxes, dust boxes, shipping coops, etc. This book should be in the hands of every poultryman. It will save money by telling just the kind of house desired for the different localities and the size best suited for the various sized flocks.

Price is only 50 cents

Will send this valuable book and American Poultry Journal one year for 75 cents. Send all orders to

S. T. Campbell - - Mansfield, Ohio

the body stripped for about an inch, and some of the feathers are broken off about one-eighth of an inch from the skin. They are free from lice and in good health. What is the trouble, and what the remedy. **S. R. G.**

Fredericksburg, Va.

Answer.—This is usually caused by the male birds being too active. Unless you desire to use the eggs for hatching we would advise you to remove the male bird from the pen.

Question.—(1) Do you think this is a good way to feed young chickens? A good grade of chick feed for the first three weeks, then cracked corn and whole wheat, with plenty of grit and oyster shell and fresh water. (2) Have seven hens and seven pullets, with a two-year-old cock. Will this be too many for good results? (3) How can I make a good whitewash for inside of chicken coop? (4) Will sleeping outside in summer do

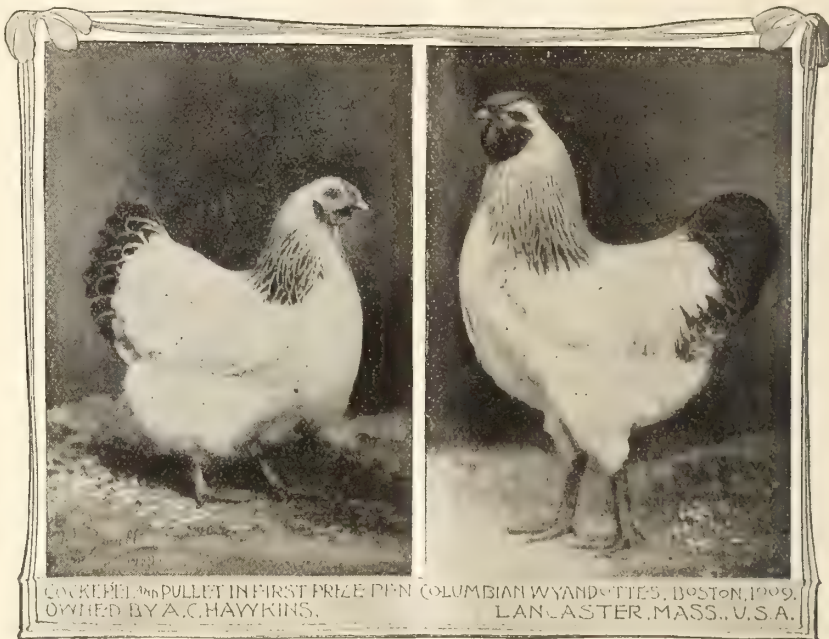

Answer.—(1) No. (2) No. The American standard of perfection will give you the correct color. We have not the space in this department. (3) Ten pounds.

Question.—(1) How test fertility of eggs which have been setting ten days? (2) Is it sometimes advisable to help a hatching chick which has pipped its shell? If so, how? (3) Do they ever try to help a chick out which has not pipped its shell? If so, how?

W. D. R. A.

Dresden, O.

Answer.—(1) By holding them up to a strong light. If they are perfectly clear they are not fertile. If they show a dark spot from which numerous blood lines extend, they are fertile. (2) It is not advisable. A chick that has not enough strength to get out of the shell without assistance will never amount to anything. (3) No.

COCKEREL AND PULLET IN FIRST PRIZE PEN COLUMBIAN WYANDOTTES, BOSTON, 1909.
OWNED BY A. C. HAYKINS, LANCASTER, MASS., U.S.A.

any harm to old ducks? How many ducks, Indian Runner, can be kept with each drake and have good results? (6) Will I mate old ducks with young drake and young ducks with old drake, or should they be the same age. **B. W.**

Burlingame, Kans.

Answer.—(1) Yes. (2) Ten females is plenty for one male; unless he is an exceptionally vigorous bird. (3) Slake a half bushel of lime in boiling water, after which strain it to remove all sediment. Add two pounds of sulphate of zinc, one pound common salt and a half pound of whitening thoroughly dissolved. Mix to proper consistency, with skim milk if possible, and if not, use hot water. Stir in thoroughly a half pint of liquid glue and apply the wash while hot. (4) No, unless allowed to sleep in damp places. (5) From six to eight. (6) Mate the old and young together.

Question.—(1) Please tell me whether slaked lime or coal ashes are good materials for nests? (2) Is a Rhode Island Red hen the color of the cock? If not please state color. (3) What is the average weight of a Light Brahma cock when fattened, and are the hens good winter layers? **J. S. B.**

Lakota, N. D.

Question.—In your February issue you advise not to use sawdust on dropping boards. Why? **H. C. H.**

Lockport, N. Y.

Answer.—There are several reasons why sawdust should not be used on the dropping boards; principal among them are: The fowls will eat more or less of it, and it is not considered a very nourishing food, and it also harbors lice and mites.

Question.—(1) What color should S. C. Buff Leghorn legs be? (2) Will the Standard of Perfection give full description of all the different breeds of chickens? **J. B.**

Spanish Fork, Utah.

Answer.—(1) Thighs black; shanks yellow. Toes, yellow or dusky yellow. (2) Yes.

Question.—(1) I have a nice bunch of 3-weeks-old chicks that I hatched in my incubator. This morning I found one dead and another drooping. Crops are empty; no lice. They are as light as a feather and weak and poor. (2) Where can I get Buff Laced Polish Bantams? **E. M. S.**

Temple, Tex.

Answer.—(1) This is either indigestion or lice. Give them plenty of exercise and

grit. (2) Watch the classified ad columns of AMERICAN POULTRY JOURNAL.

Question.—(1) We have ordered 100 young chicks, to be hatched April 1. Would it do to mate those pullets and cockerels for the first year? (2) If so, after another year would it be best to order our cocks from the same buyer, or had we better get them from a new breeder altogether? (3) How many old chicks could I keep in a yard 13'x40'?

Answer.—(1) Yes. (2) Not unless it is the same strain. (3) Between 50 and 60.

Question.—(1) Which is the best food for chickens, alfalfa hay or alfalfa meal? (2) Are they fed alone, or with what other feed are they mixed? (3) Are they as good feed for chickens as grain?

Ft. Wayne, Ind. H. D. W.

Answer.—(1) Alfalfa meal. (2) Should be mixed in the soft feed. (3)

(2) About how many bushels to an acre will they produce on good land? (3) Is it natural for Rhode Island Red pullets when first beginning to feather out, to have white on the tips of their wing feathers? Will this come off when they get older? Does it disqualify them for the show room? (4) Do poultry shows furnish the coops for fowls free of charge? Does the association that holds poultry shows at Louisville, Ky., charge for entering a bird; if so, how much? What is the name of the secretary of that association?

Georgetown, Ind.

J. C. M.

Answer.—(1) A small quantity mixed with other feed may be used. (2) Thirty to forty bushels. (3) Yes. This will gradually disappear, and unless the whole feather is white it will not disqualify. (4) The larger shows furnish the coops; but some of the smaller shows, where the entry fee is very small, require the exhibitor to furnish

heads from side to side and stagger, sometimes falling to the ground, and do this occasionally and more so when anything occurs to disturb or excite them. In a few days they begin to mope, then the neck seems to get stiff and they don't eat and eventually die. Others take down by what seems to be leg weakness, their toes become cramped, and they cannot walk very well and continue to grow worse and finally get so bad they cannot eat or drink and lose control of their head and neck and die or must be killed. Now what do you call this? And what is the remedy? I feed a little corn, but mostly wheat as a grain feed; also feed bran mash once a day, with granulated bone meal and beef scrap. I also keep

Rose Comb Black Minorcas in the yards of Lloyd Mishler, North Manchester, Ind.

Will not take the place of grain, but will take the place of green food and assist egg production.

Question.—(1) Tell me how much food and kind should one chick eat till grown, and what kind of food at different ages, and how much to feed one chick. (2) What do you mean by so many parts measures of anything—oats, wheat, etc.? Windsor, Va. L. C. B.

Answer.—(1) There is no set rule for feeding chicks. They should be fed about every two hours for the first few days. Any one of the various chick feeds now on the market will do the work. Space will not permit us to give full details here. (2) In mixing feed you can call it parts, measures, quarts or bushels. To illustrate: Three bushels of wheat, two bushels of oats, one bushel of cracked corn.

Question.—(1) Is Canada peas good feed for growing chicks and old fowls?

his own coop. All poultry shows charge an entry fee. We do not know what the charge is at Louisville, but this information can be obtained from the secretary, W. T. Cawton, 2220 Bowman St., Louisville, Ky.

Question.—How can I remove the spurs from a cock bird? Flint, Mich. R. M. B.

Answer.—They can be sawed off with a fine saw and the sharp edges rounded off with a file.

Question.—(1)—What is the best litter for chickens in the scratching shed? W. J. S.

Answer.—Good oat straw, chaff or cut clover hay.

Question.—I have S. C. R. I. Red and Buff Cochin chickens and have lost several from what seemed to me very peculiar diseases. At first they seem to get blind staggers or fits by throwing their

plenty of grit before them all the time. They are laying well and have been all winter and spring. Are not fat, but in fair condition. C. R. M.

Merrick Co., Neb.

Answer.—Where the fowls stagger the trouble seems to be congestion of the brain, probably caused by intestinal worms. Treatment—Give 30 grains of Epsom salts or $1\frac{1}{2}$ grains of calomel or two teaspoons of castor oil. If they do not recover from this treatment try one to five grains bromide of potassium three times a day dissolved in a tablespoon of water. For worms—Mix in the feed one teaspoon of powdered pomgranate root for every fifty head of fowls; in the worst cases this should be followed by a dose of two teaspoonsful of castor oil. Use air slacked lime on the dropping boards; saturate the lime with a ten per cent solution of sulphuric acid. Pour the acid slowly in the water. Never pour water in the acid or it will explode; do not let it splash on hands or cloths, as it burns severely. Your case seems to be complicated, and we would advise you to procure a copy of Diseases of Poultry, by D. E. Salmon, D. V. M. It covers all diseases of poultry and is by far the best book published. We can supply you this book for 50c. It contains 248 pages $5 \times 7\frac{1}{2}$ inches and treats on all diseases of poultry, turkeys, ducks and geese.

Question.—(1) What was the matter with my Rhode Island Red hen. She seemed all right in the morning; at night I noticed that she could hardly walk and had the appearance of a hen with an egg broke in her; and for the next few days she could not move one leg, and she kept getting worse, and she could not move at all; then she died. (2) Is a pen 28 by 4 too small for 17 Rhode Island chickens? (3) Is 14 hens too many for one rooster? (4)

What was the matter with my rooster? He got into a fight and I think he whipped. But 3 days after he got a sort of rheumatism in the neck; his neck just stuck out straight; he could not move it; he is well now, but he seems sick yet. What should I do for him? (5) I have a hen that all around her eye is swollen up and matter keeps coming out of her eye; the swollen parts are hard; she does not notice it much. What is a cure? (6) How many nests should 14 hens have? (7) How

(4) He was no doubt injured severely during the fight. He should be penned up by himself and given special care. (5) Roup. She should be killed, as she is not fit to use as a breeder or for any other purpose. (6) Half a dozen. (7) At this season, an average of ten. (8) Plymouth Rock should weigh one pound more.

Question.—What is the cause of hens getting droopy in the hind part; their feathers almost touch the ground?

Gilmore, Ind.

C. M.

Answer.—This is generally caused by the fowls becoming too fat, and is more apt to occur in old fowls. Reduce the ration and feed more green food.

Question.—Can Barred Rock chicks, or, in fact, chicks a day old, be determined as to sex?

E. P. R.

Schenectady, N. Y.

Answer.—No.

Question.—(1) What is the cause of little chicks (incubator-hatched) being deformed? (2) Some of my little chicks seem to have fits; they stagger around and in fifteen or twenty minutes die. I have lost six out of a hundred.

Wilton, N. D.

Mrs. H. A. P.

Answer.—(1) This is usually caused by too much heat at some period during incubation. (2) This is caused by head lice. Grease the tops of their heads with lard, to which has been added a few drops of kerosene oil.

Question.—Will you tell me through your valuable journal what is the matter with my chickens? They seem to get sick suddenly. Their combs get black, then all their head gets black and usually in twenty-four hours they are dead. They are not loose in the bowels until the last few hours, and have no lice.

L. D.

Decatur, Ill.

Answer.—Congestion of the liver. The symptoms of this disease are obscure and not noticeable until the disease has reached such an advanced stage that medicine is of no avail. This disease is the result of lack of exercise combined with overfeeding or by the birds eating tainted or moldy food. Also is caused by the fowls becoming over-fat.

Question.—(1) The chicken house is 10x5 feet, and yard contains about 700 square feet; how large should the scratching shed be in proportion with house and yard? How many White Plymouth Rock chickens ought it then accommodate? (2) What is the standard weight of White Plymouth Rock hen and cock?

P. L.

Piqua, Ohio.

Answer.—(1) The scratching shed can be as large as space will permit; but it should be at least as large as the house, and if this is done your house will accommodate 15 to 20 fowls. (2) Cock, $9\frac{1}{2}$ pounds; hen, $7\frac{1}{2}$ pounds.

Question.—Kindly let me know what will be a good feed for the chickens in the morning; also in the evening. Let me know how often I should feed them.

East Orange, N. J.

G. E.

Answer.—Whole wheat in the morning, a dry mash at noon and wheat and oats at night. Mash to consist of one-half ground oats, one-quarter ground barley and one-quarter ground wheat. This to be fed in hoppers. Chickens should be fed three times a day, and

GEORGE H. BURGOTT.

Expert Poultry Judge and breeder of S. C. Brown Leghorns, Lawtons, N. Y.

many eggs should I get per day? (8) Which should weigh the most, a Barred Plymouth Rock or Rhode Island Red hen? W. H.

Lewis, Ia.

Answer.—(1) An egg broken in the egg passage which caused gangrene to set in. There is no remedy for this. (2) No. (3) Unless he is very vigorous.

in addition to grain feeds they should be fed a liberal quantity of green stuff.

Question.—Please give directions for the water-glass solution in your next issue of the American Poultry Journal for preserving eggs. A. C. R.

Plainfield, N. J.

Water-glass is unquestionably the best method of preserving eggs. If properly packed they will keep in first-class condition for from nine months to a year. Water-glass is sodium and potassium silicate, sodium silicate being usually the cheaper. If wooden kegs or barrels are to be used in which to pack the eggs, they should first be thoroughly scalded with boiling water to sweeten and purify them. It is a cheap product and should not cost more than 50 cents a gallon, or enough to preserve fifty dozen of eggs. It can be purchased at all wholesale druggists' and at most retail ones.

The directions for use are: Use pure water that has been thoroughly boiled and cooked. To each ten quarts of water add one quart of water-glass. Pack the eggs in the jar and pour solution over them, covering well. Keep the eggs in a cool, dark place. If the eggs are kept in too warm a place the silicate is deposited and the eggs are not properly protected. Do not wash the eggs before packing, for by so doing you injure their keeping quality probably by dissolving the mucilaginous coating on the outside of the shell. For packing use only perfectly fresh eggs, for stale eggs will not be saved and may prove harmful to the others.

Question.—(1) Will chickens lay better shut up in winter than to run loose,

out in storms and general weather? (2) How many square feet is absolutely necessary per hen in buildings facing south with south side covered with wire netting and cloth? (3) What is the best grain for winter eggs and how much should, say, 100 hens have per day? (4) How would wheat and oats do for morning scratch food, a bran mash at noon and corn at night work? Brimfield, Ill. H. H. D.

Answer.—(1) Yes. (2) Six. (3) Equal parts of wheat and oats. The quantity will have to be determined by experience, as no one can tell exactly what quantity of feed will be required for a given number of chickens. Chickens are much like members of the human family where the food question is to be considered. Some of them eat twice as much as others, and the heavy eaters are not always the producers. A small handful of grain to each fowl three times a day will be found ample for the ordinary flock. (4) This is a very good bill of fare, and especially so if some vegetables are added to the bran mash, and the corn fed only on very cold nights and whole wheat given in place of corn in moderate weather.

Question.—Last week we had a hen that seemed all right in the morning.

At noon she appeared rather dumpish, and toward night began to shake her head; then she would gap like a chicken having the gaps, her comb and wattles turned a darker red and she died before dark. What was the trouble with her, and is there any cure?

Illion, N. Y.

H. R.

Answer.—From the description given we are of the opinion that this fowl had congestion of the liver. The symptoms of this disease are obscure, and it is difficult to make a diagnosis during the life of the affected bird. If the condition is suspected in time for treatment give sulphate of magnesium or sulphate of sodium in a purgative dose (20 grains to a dram) and follow with sulphate of magnesium 10 grains, bicarbonate of sodium 2 grains, repeated daily for a week. This disease should be prevented by proper feeding, regular exercise and protection from parasites and infectious diseases.

Question.—(1) Is rye for feeding to poultry as good as wheat? (2) What is the best to give to little chicks (8 to 14 days old) if they are troubled with diarrhea? (3) I have a White Orpington rooster that seems in very good health, eats all right, tends good to hens, no discharge from nostrils, no sneezing or

FLY REMOVER Saved \$75.00

In Milk for a Customer who used it On Five Cows in 90 Days

Kills and keeps off animals; Flies, Mosquitoes, Ticks, Lice and Insects. Cows give 25 per cent more milk, as they are protected and feed quietly all day. Horses work and drive better. Hogs and poultry are free from lice. Used for years by same dairyman. No Gad Flies or Warbles if it is used.

Terms Cash. Booklet Free. Ripley Mfg. Co., Dept. 27, Grafton, Ill.

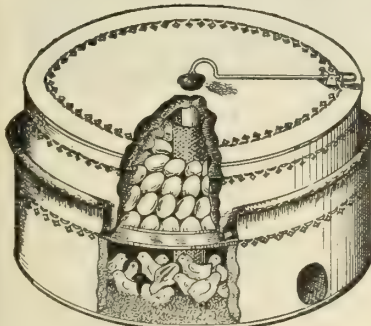

METAL MOTHERS

OUR NEW DISCOVERIES MAKE

POULTRY KEEPING EASY AND PROFITS SURE

OUR MACHINES were used exclusively in the original Philo System plant where over \$1500 FROM 60 HENS IN TEN MONTHS. has been cleared from the sale of eggs, baby chicks and fowls raised on a city lot 40 feet square. One of the largest hatching plants in America saved over \$700 this year by using our System of brooding. We sell the best brooder ever made for only \$2.50.

One party hatched and raised \$500 worth of poultry last year with four Metal Mothers, and hundreds of others are delighted with our machines and our new way of raising poultry. Our combined machine hatches and broods perfectly at the same time with only one lamp and one-fifth the oil used in other machines. Once filling the lamp completes the hatch. It runs as steady as a clock in any room from cellar to garret, and our Long Burning Safety Lamp runs on for weeks without attention. It is the only machine that airs the eggs in the natural way and applies the heat to the chickens like the mother hen.

THE BROODER-HATCHER

OUR 1909 PATTERN METAL MOTHERS

are the perfected results of the latest discoveries in artificial incubation. They will hatch hens, ducks, turkey and goose eggs equally well and at the same time. Regulation of moisture and heat entirely automatic. One Metal Mother complete \$7.50; two, \$14; four, \$24. One Hatcher complete \$5; two, \$9; four, \$17; six, \$24. Catalogue free.

The Cycle Hatcher Co., Elmira, N. Y.

Dear Sirs:—As per your letter I will send you an order for six machines in a few weeks. Am hatching with the one I now have. Got 47 chicks from 50 eggs. Have abandoned all my 200-egg machines. Am practicing in my store with a view to starting my 40-acre poultry plant near town here. Think I can sell a lot of these machines next year.

H. W. White, 311 Ada St., Yankton, S. D.

The Cycle Hatcher Co., Elmira, N. Y.

Gentlemen:—The hatcher we bought of you last May is all right. We took off two hatches with it; one of 43 chicks and one of 46 chicks. All good ones. Yours respectfully, G. W. Simpson, Austin, Pa.

The Cycle Hatcher Co., Elmira, N. Y.

Sirs: You people may be interested to know what an experiment with one of your Metal Mothers has done for us. On the 17th of Oct. we put 40 eggs in our machine, 38 of them being fertile, and when hatching time came we were surprised to find 38 chicks from our 38 eggs. This we think an excellent record, for the machine had been placed out in the open weather, the only protection being an old tin covered box. Yours respectfully, J. P. & L. L. Hollinger, R.I. Red Farm, Witner, Pa.

Cycle Hatcher Co. - 214 Wm. St., Elmira, N. Y.

heavy breathing, comb is blood-red, but his ears are running constantly. What is it, and how can I cure him? Is he good for breeding? (4) From 24 hens 3,253 eggs in one year, is this all right, or could it be better? P. R.

St. Louis, Mo.

Answer.—(1) No. (2) Boiled milk to drink and feed on boiled rice, to which has been added a liberal sprinkling of powdered cinnamon. (3) This, no doubt, comes from a severe cold that the bird has had at some time in the past. He should be fed a small amount of sulphur in the soft feed about three times a week for a few weeks. Would not advise his use as a breeder until he has fully recovered. (4) This is only

was returned to the yard and the others very near killed her. Can this fighting be stopped? C. J. O.

Buffalo, N. Y.

Answer.—A good vigorous rooster will generally prevent fighting among the females. You should keep this one hen away from the others, and keep your fowls busy hunting for food. Idleness is what causes more or less trouble of this kind.

Question.—I have a Rhode Island Red rooster, a single comb, that is in good health; the back part of his comb turned black and the top of his comb is all right; the black spot is next to the head. What is the cause and what

of irritation in the central portion of the oviduct. The hen laying such eggs should be removed from the flock, kept quiet and treated as follows: Give green and cooling food, avoid meat, condition powders, pepper or other irritating ingredients. Keep the bird quiet and administer Epsom salts, 20 to 30 grains; bicarbonate of soda, 2 grains. Follow this with one-half drop tincture of aconite root three times a day.

Question.—(1) Which is the best layer, a hen past 1 year 6 months or a hen in that time? (2) Do many men make their living alone on poultry? Aurora, Ill. A. S.

Answer.—(1) A hen 1 year old is considered to be in her prime for laying. Of course, there are exceptions, and many hens have been known to lay better in their second year. (2) Yes.

Question.—(1) I have a pen of chickens, four pullets and one cockerel; have got them in a pen 40x60 feet. What should I feed to make a balanced ration and how much to feed at a feeding, and how often should I feed? (2) What is the cause of chickens standing on their roosts at night? I have been in my henhouse quite often of late and I always find some of my hens standing on the roosts and seemingly asleep. Eureka, Ill. S. C.

Answer.—(1) A dry mash consisting of two parts ground oats, one part ground wheat, one part ground barley, to which add 5 per cent of beef scraps and 5 per cent alfalfa meal. Feed in hoppers, and let them eat all they want. This should be fed about 10 o'clock in the morning. In the early morning scatter a little wheat and oats in the litter for them to work for. At night a little cracked corn may be given. (2) This is usually due to lice and mites.

Question.—(1) How many Leghorn hens can be kept in a yard 26 by 45 feet? (2) How large must the coop be for these hens? (3) Do Japanese bantams, young or old, ever have feathers on the feet? (4) How high must a fence be for Leghorns? (5) How high must a fence be for Japanese bantams? (6) Can you tell me any place where I can get Japanese bantams? (7) How high for Brahmas (the fence)? (8) How high for White Wyandottes? (9) How large a yard for 10 Japanese bantams? C. W. A.

Milwaukee, Wis.

Answer.—(1) One hundred. (2) A house for 100 fowls should contain 600 square feet of floor space. (3) No. (4) Eight feet. (5) Four feet. (6) Read the advertisements in these columns. (7) Four feet. (8) Six feet. (9) Bantams can be confined in very small quarters, about one-half the space required for the ordinary fowl.

Question.—(1) In generally speaking about the green cut bone, do you mean all bone or is it meat and bone mixed; here for instance in winter we cut up horses, cows and calves (healthy ones) and feed meat and bone together; some cook it rare. Is this better or not as good as feeding it raw occasionally this time of the year? (2) Have hens that appear very sick; they are stupid and very sleepy; cannot hardly arouse them; look to be in perfect health; comb very red, and in a few hours they seem to be all right again; can you

a fair average, and could easily be increased.

Question.—(1) Would sawing off a cock's spurs be injurious to same? (2) What is the best method of preventing cocks from injuring hens with their spurs? F. M. C.

Answer.—(1) No. (2) Saw off the spurs, after which smooth off the edges with a file. Care must be taken not to saw the spurs too close to the leg.

Question.—I have some Plymouth Rock chickens. I have had them since they were two weeks old. They got along all right until about a month after they started to lay; from that time on they have been fighting among themselves. One hen got hurt and was taken from the others, and when well

should I do? Some of my hens go on the nest every day and do not lay. What is the cause? J. F. L.

Durand, Mich.

Answer.—(1) Apply vaseline to the comb once a day for a week. (2) Examine your hens to see if they are egg-bound. If egg-bound inject a small quantity of olive oil and gently manipulate the parts. Afterwards give cooling food, and, if hens are too fat, reduce the ration.

Question.—Please state in your next issue the cause of a laying S. C. B. Leghorn pullet laying an egg about the size of a pigeon egg without a yolk in it. E. C.

Defiance, Ohio.

Answer.—The production of these small, incomplete eggs is an evidence

give cause, and a cure? (3) Would White Leghorn pullets get fat enough to cause leg weakness by feeding corn only once per day at night, or is this caused by damp houses? (4) Is sorghum seed a good feed for laying hens, and what is its analysis, and what is the analysis of durum wheat as compared with flour wheat, and do you consider it as good for laying hens?

N. Harpersfield, N. Y. W. H. D.

Answer.—(1) Very little meat should be left on the bones when they are cut. Meat can be fed either cooked or raw. We believe better results are obtained when fed raw. (2) Probably comes from feeding too heavy and not enough exercise. (3) No. This is probably rheumatism. (4) A small quantity may be used with other feed, but it has not proven profitable as a poultry food.

Queen Lil, Single Comb Black Orpington pullet, owned by H. F. Kennerk, of Fort Wayne, Ind. Judge Zimmer gave this bird a score of 95%. At the beginning of the present breeding season Mr. Kennerk had Judge Zimmer mate up his birds. The subject of the cut is without doubt one of the finest specimens of Single Comb Black Orpington pullets in the country. She has all the qualities that go to making up a prize-winner. Mr. Kennerk also has other birds which score high. He has mated his best cockerel with four of his best pullets, and it is safe to predict that his birds will be heard from during the coming show season. He has housed all his birds in open air houses, and is doing everything to build up a strain of strong, vigorous birds.

Nothing is quite as good as whole wheat.

Question.—(1) How big a hen house would be needed to accommodate twenty-five laying hens? (2) How many White Wyandotte hens would be needed to mate with a cock to have eggs for hatching? (3) What is the weight

of a male and female White Wyandotte? (4) How can they be kept pure white? (5) Will duck eggs hatch good in an incubator? (6) How long does it take to have ducks fit for market and how long should they be kept to make a profit? (7) What is the best feed for fattening them? (8) How many ducks should be with one drake to have fertile eggs for hatching?

J. C.

Watrous, Sask.

Answer.—(1) A house 12x18 will give ample room for 25 laying hens. (2) Ten. (3) Cock 8½ lbs.; hen 6½ lbs. (4) By proper matings. (5) Yes. (6) Six weeks to two months. Ducks should not be kept any longer than three or four months, for after they reach that age it costs too much to feed them. (7) A mash consisting of ground corn, oats and barley, equal parts, to which may be added chopped celery to impart a fine flavor to the meat. (8) Six.

Question.—What is the trouble with pullets laying eggs of regular size that have a blood clot about the size of a pin head on one certain side of the yolk. I have 21 chickens in all, 5 hens, 2 cockerels, 14 pullets. The eggs from the hens seem to be perfect in every way. Should I use the pullets' eggs for setting. The hens, pullets and cockerels all run together.

W. J. P.

Utica, N. Y.

Answer.—See answer to F. P. P. in this issue. The pullet eggs will probably not prove fertile.

Question.—(1) What is the cause of blood spots in some eggs? (2) What is a good cure for cholera and can the chickens be cured of this? (3) Is it a good plan to soak the eggs before putting them in incubator?

F. P. P.

Hitchcock, S. D.

Answer.—(1) This is the result of a slight hemorrhage which generally occurs in the upper two-thirds of the oviduct, and is the result of great functional activity and congestion of the blood vessels of the reproductive organs. Medium doses of perchloride of iron or ergot will be found useful. (2) Cholera is a very difficult disease to cure, and we would recommend some one of the various cures advertised in these columns. (3) No.

Question.—What is the cause of young chicks hatched from incubator having sore eyes? Their eyes begin to get weak and swell shut, and when closed chick will stand straight and stagger backwards. Give remedy.

Warren, Ark.

W. W. H.

Answer.—This is caused by breeding

from stock that at some time has had roup. There is no remedy that we can recommend, as it is only a waste of time and money to doctor little chicks.

Question.—I have a S. C. R. I. Red pullet which lays eggs with dents in them and sometimes a little flat on the sides. Will you please state in next issue the cause of these deformed eggs and whether the eggs will be fertile or not?

R. S.

Sidney, Ohio.

Answer.—This is caused by a deformity in the shell-forming chamber of oviduct, and cannot be remedied. As a rule these eggs are not fertile.

Question.—I would like to ask you if you have ever heard of rabbits keeping a poultry-house free from lice? We have a friend who keeps rabbits in his coop and the coop and hens are free of lice and vermin. Please answer in the next issue of the Journal.

J. B. F.

Adams, Mass.

Answer.—We have never heard of this claim being made. Can any of our readers answer?

Question.—I have a Buff Orpington pullet which some time ago I found one evening at feeding time lying on her side with her neck twisted around so that the head was upside down. I tried a number of different things and she got so she seemed all right again. But later the same thing developed and now she cannot stand and lays on her side to eat. Her appetite seems good, and

is ready to eat every time they are fed. Will you kindly tell me what the trouble is, the cause and if there is any cure for it? Yours very truly,

Addison, N. Y.

W. W. B.

Answer.—This is caused by a contraction of the muscles of the neck. It is a common ailment among fowls, but as yet there has been no remedy discovered for same.

Question.—What is the right age for caponizing?

O. O. B.

Langedahl, N. D.

Answer.—About four months.

Question.—One of my hens seemed to be mopey, would sit around and eat nothing, but drank quite a little water. She had diarrhea. We gave her scalded milk, olive oil and a remedy I got

oats. Have fed some ground oats, but the beards look dangerous even when ground. A recent editorial in your journal advised feeding oats. How often, and in what form would you advise?

L. M.

Ripley, O.

Answer.—Ground oats may be fed to little chicks without fear of any bad results. Read answer to others on the feed question in this issue.

A SUMMER SCHOOL COURSE IN POULTRY HUSBANDRY.

The summer school of the Connecticut Agricultural College will hold its eighth annual session for four weeks from June 29 to July 23 inclusive. The courses offered in nature study, domestic science, agriculture and methods of

daily at the poultry plant, and every effort will be made to give each one a thorough understanding of the principles involved as well as the practical application.

Registration fee \$5. Tuition free in all courses, and necessary expenses may be kept at a low figure. There are no restrictions as to residence.

An illustrated prospectus of the summer school will be mailed free upon application.

F. H. Stoneburn,

Connecticut Agricultural College.

Storrs, Conn., April 30, 1909.

ILLINOIS LEAGUE ORGANIZED.

The Illinois League of Poultry Associations was organized at Galesburg on Wednesday evening, April 21, the first of its kind in the west and the second

Central office of Cyphers Incubator Co., Buffalo, N. Y., through which passes a volume of business approaching a million dollars a year on Incubators, Brooders and Poultry Supplies—for the Cyphers Company are manufacturers of everything a poultry-keeper needs. Branch offices are established in New York, N. Y., Boston, Mass., Chicago, Ill., Kansas City, Mo., Oakland, Cal. and London, Eng. Cyphers Company's big 212-page catalogue is worth having. It contains interesting illustrated chapters on the poultry business and is full of other valuable information. It will be sent free if you mention this paper.

from a poultry store (Arabian tablets). She would shake her head as if she had a cold. This lasted about two weeks. We had just given her some olive oil, when she vomited about a cupful of water and fell over; in about three minutes she was dead. Can you give me any idea of what the trouble was?

Charlotte, N. Y.

W. J. F.

Answer.—Unless we are furnished with a description of the condition of the intestines at time of death we are unable to arrive at a definite conclusion as to what the trouble was. Therefore when our readers take advantage of this department they should always make a thorough examination of the fowls, both before and after death.

Question.—I have some chicks about 6 weeks old and want to begin feeding

teaching elementary agriculture have been planned to meet the needs of teachers, especially those in rural schools, as well as others who may wish to gain a practical knowledge of the subjects considered.

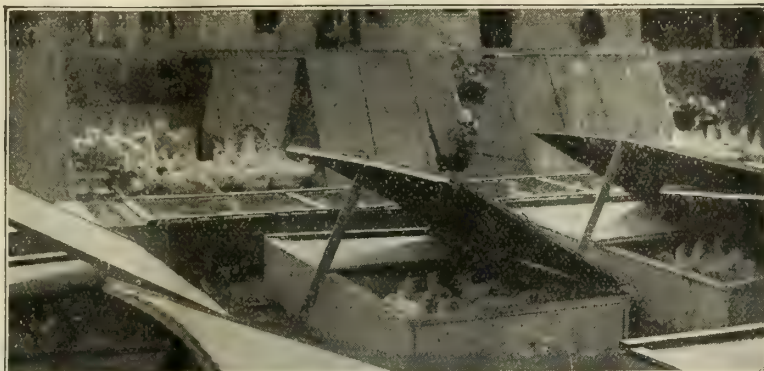

This season, for the first time, the summer school offers a special course in poultry husbandry. This is in response to a demand from teachers, business and professional people who would like the advantages to be gained from such a course, but who cannot absent themselves from their work during the winter months when such courses are usually given. A comprehensive series of lectures will be delivered by members of the college faculty and by poultrymen of recognized ability. Each student will have a certain amount of practical work

in America. The meeting was called to order by Dr. J. H. Oliver, of Kewanee, with the following accredited representatives of Illinois poultry associations present: Kewanee, Messrs. E. E. Johnson, V. W. Nobling and the chairman; Princeton, Mr. Chas. Johnson; Monmouth, Messrs. F. T. Hayden and S. L. Hamilton; Bushnell, Messrs. F. P. Nessel and Roy Hey; Quincy, Mr. F. C. Hare.

Dr. Oliver stated the main objects of the league as follows: The arranging of the dates of league shows in a circuit to avoid conflict; frequent meetings of the representatives to discuss business matters and to increase the interest in, and the entries of the league shows; the creation of a special fund to be awarded to the best birds exhibited in the league shows; the

THE PHILO SYSTEM

IS ESPECIALLY VALUABLE TO THE FARMER AS WELL AS THE CITY OR VILLAGE FANCIER AND IS ADAPTED TO ALL CLIMATES, ALL THE BREEDS AND PEOPLE

The Philo System is Unlike all other Ways of Keeping Poultry

and in many respects it is just the reverse, accomplishing things in poultry work that have always been considered impossible and getting unheard of results that are hard to believe without seeing. However, the facts remain the same and we can prove to you every word of the above statement.

The New System Covers All Branches of the Work Necessary for Success

From selecting the breeders to marketing the product. It tells how to get eggs that will hatch, how to hatch nearly every egg, and how to raise nearly all the chicks hatched. It gives complete plans in detail how to make everything necessary to run the business and at less than half the cost required to handle the poultry business in any other manner. There is nothing complicated about the work and any man, woman or child that can handle a saw and hammer can do the work.

Two Pound Broilers in Eight Weeks

are raised in a space of less than a square foot to the broiler without any loss and the broilers are of the very best quality, bringing, here, three cents per pound above the highest market price.

Our Six-Month-Old Pullets Are Laying at the Rate of 24 Eggs Each Per Month

in a space of two square feet for each bird. No green cut bone or meat of any description is fed, and the food is inexpensive as compared with food others are using.

Our new book, THE PHILO SYSTEM OF PROGRESSIVE POULTRY KEEPING, gives full particulars regarding these wonderful discoveries, with simple, easy-to-understand directions that are right to the point, and fifteen pages of illustrations showing all branches of the work from start to finish. It also tells how to make a brooder for twenty-five cents that will automatically keep all lice off the chickens or kill any that may be on them when in the brooders.

Our New Brooder Saves Two Cents on Each Chicken No lamp is required. No danger of chilling, overheating or burning up the chickens with the brooders using lamps or any kind of fire. They also keep all lice off the chickens automatically, or kill any that may be on them when placed in the brooder. Our book gives full plans and the right to make and use them. One can be easily made in an hour at a cost of from 25 to 50 cents.

A Few Testimonials

Valley Falls, N. Y., Sept. 5, 1907.
It was my privilege to spend a week in Elmira during August, during which time I saw the practical working of the Philo System of Keeping Poultry and was surprised at the result accomplished in a small corner of a city yard. Seeing is believing, they say, and if I had not seen it, it would have been hard to believe that such results could have followed so small an outlay of space, time and money.

P. S.—A year's observation, and some experience of my own, confirm me in what I wrote Sept. 5, 1907. The System has been

(Rev.) W. W. COX.

October 22, 1908.

Send \$1.00 and a copy of the latest revised edition of the book will be sent you by return mail. Address

tried so long and by so many, that there can be no doubt as to its worth and adaptability. It is especially valuable to parties having but a small place for chickens; seven feet square is plenty for a flock of seven.

(Rev.) W. W. COX.

Ransomville, N. Y., Dec. 5, 1908.

Dear Sir:—Last spring we purchased your book entitled the "Philo System," and used your heatless brooders last spring and summer. The same has been a great help to us in raising the chick in the health and mortality, the chicks being stronger and healthier than those raised in the brooders with supplied heat. We believe this brooder is the best thing out yet for raising chicks successfully. We put 25,000 chicks through your heatless brooders this last season and expect to use it more completely this coming season. We have had some of the most noted poultrymen from all over the U. S. here, also a large amount of visitors who came daily to our plant, and without any exception they pronounce our stock the finest and healthiest they have seen anywhere this year.

Respectfully yours,

W. R. CURTISS & COMPANY.

Are They Worth Saving? Don't Let the Chicks Die in the Shell

One of our secrets of success is to save all the chickens that are fully developed at hatching time, whether they can crack the shell or not. It is a simple trick, and believed to be the secret of the Ancient Egyptians and Chinese which enabled them to sell the chicks at 10 cents a dozen. It takes but a minute to save a chick and no skill required.

Note What Others Say of This "Trick of the Trade"

Ringwood, Ont., Can., May 6, 1908.

Dear Sir:—Some time ago I got the Philo System and must say it is the best book I ever read on Poultry. I have tried the "Trick of the Trade" and saved twenty-two chickens which otherwise would have died.

Yours truly,

ROXY MOYER.
Bethlehem, Pa., April 25, 1908.

Dear Sir:—Your book safely to hand, and have derived great benefit from it, especially "A Trick of the Trade."

Respectfully yours,

G. H. STANFORTH.
Potomac, Ill., May, 1908.

Dear Sir:—I am using your System of Progressive Poultry Keeping and consider it the best work on Poultry Raising I ever read. In my last hatch I saved twenty-three chickens by following the article, "A Trick of the Trade."

Yours truly,

FRED JANISON.

E. R. PHILO, Publisher . . . 14 Third Street, Elmira, N. Y.

purchase of exhibition coops by the league and using them around the circuit, and the value of an organized league of poultry associations in improving the poultry conditions of the state.

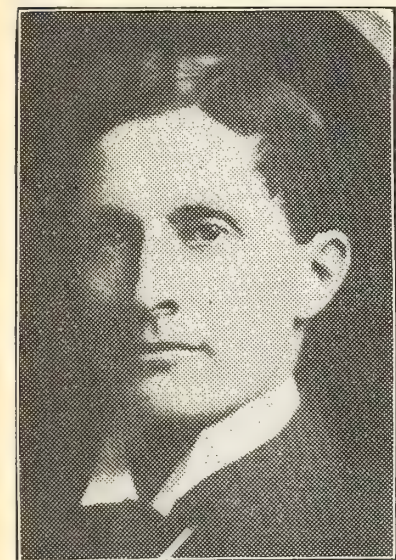

The motion that an Illinois League of Poultry Associations be organized was carried unanimously. A committee of three was appointed to draft the constitution and by-laws.

The following officers were elected: President, Dr. J. H. Oliver, Kewanee; first vice-president, Mr. T. H. Pease, Princeton; second vice-president, Mr. F. P. Nessel, Bushnell; secretary-treasurer, Mr. F. C. Hare, Quincy; executive committee, Dr. J. H. Oliver and Messrs. T. H. Pease, F. P. Nessel, F. C. Hare and S. L. Hamilton.

The shows that are at present members are: Quincy, November 29 to December 4; Kewanee, December 6 to 11; Princeton, December 13 to 18; Bushnell, January 3 to 8, and Monmouth, January 10 to 15.

The Illinois League of Poultry Asso-

ciations has organized under favorable conditions, and should be a valuable asset to the poultry interests of Illinois. As it grows and extends its protecting hand to an increasing number of poultry associations, by advertising their shows in every premium list of the circuit; by offering valuable prizes for competition at league shows, and by supplying exhibition coops at a nominal charge, it will become a power for good that cannot be over-estimated.

POULTRY AT DENVER'S EXPOSITION.

Extensive and elaborate preparations have been under way since last fall for holding the second annual Colorado Inter-State Fair and Exposition, which will take place on the permanent grounds of this institution at Overland Park, Denver, September 12 to 18, inclusive. Mr. G. C. Fuller, the secretary of the exposition, advises that they will offer a complete standard classification with liberal prizes,

E. H. SHIVELEY.

Expert Poultry Judge, Grove Hill, O. Now booking dates for future shows.

may be had by addressing Mr. Fuller at Denver.

Fanciers throughout the country are fast realizing the exceptional opportunities offered in the vast territory tributary to Denver for increasing their business, and the value of exhibiting at this fair. While the exhibit in this department of the fair last year was large, a great many more are planning to make this show the coming season, on their way to the Alaska-Yukon Exposition, and it is anticipated that the poultry exhibit at our fair this year will be the largest ever held west of the Missouri river. The management has provided a large, comfortable building, which will take care of the exhibit, and every convenience is offered

to shippers, as they may bill directly to the fair, and unload within the grounds.

Good mixed chick feed is cheap and gives the chicks a variety. Feed it by all means.

RICHMOND, VA.

At a regular meeting of the Virginia Poultry Association, held February 6, 1909, the advantages of the Parcel Post Delivery were discussed and seriously considered. A motion was made and carried that a committee be appointed to communicate with our Representatives in Congress, and which read as follows:

"Be it Resolved, That the Virginia Poultry Association do most earnestly desire that there be established in this country a Parcel Post Delivery. We believe that it will be a great impetus to the poultry industry, furnishing quick and reliable service which is greatly needed. We, therefore, request that our Representatives in the United States Congress use their best endeavors to have such a bill enacted."

The passage of the Parcel Post Delivery bill will enable the farmers that order eggs from the poultry breeders to receive them in better condition, far

A. B. KAYE.

Expert Poultry Judge, Walworth, Wis. Will book judging date for a few more shows.

quicker, and at a more reasonable rate than the present method of delivery.

The poultry industry has grown to be one of the largest industries in this country, and we believe the passage of such a law will be the means of placing it at the very best among our agricultural industries, and it should be encouraged as far as possible by our government.

W. D. Sydnor,
R. O. Berger,
H. M. Gaines,
Committee.

BOYS' NATIONAL POULTRY CLUB.

The second annual catalogue of this association of young fanciers is ready for distribution. It contains much of interest to both young and old "boys." A copy will be sent to any one writing for it, enclosing 2c stamp. Send today, then join when you have read it. Address Robt. G. Fields, secretary-treasurer, 33 Caruthers avenue, Nashville, Tenn.

ALASKA-YUKON EXPOSITION.

Poultry and pigeon fanciers will be pleased to learn that the judges for the poultry and pigeon show to be held in connection with the Alaska-Yukon-Pacific Exposition have been selected. They are as follows:

Poultry—Geo. D. Holden, Owatonna, Minn.; S. Butterfield, Windsor, Ontario, Canada; F. H. Shellabarger, West Liberty, Iowa; W. C. Ellison, Minneapolis, Minn.; Henry Berran, San Jose, Cal.; Chas. V. Keeler, Winamac, Ind.; S. T. Campbell, Mansfield, Ohio.

Pigeons—Wm. Stonehouse, Vancouver, B. C., Canada.

These men have no superiors and few equals in their profession and can be depended upon to be thoroughly honest in their decisions.

Inquiries concerning the entries for the poultry show are pouring in from all directions and the poultry depart-

be sent in and we earnestly urge breeders of all varieties to prepare for the contest and make the competition so hot that the men who win will realize that they have birds worthy to win in any exhibition. Each poultryman should not only plan to exhibit his own birds but should urge others to do likewise. Fanciers cannot afford to miss this grand opportunity for showing the world what wonderful progress has been made in the poultry industry.

As an educational feature of the show lectures will be delivered by several of the most widely known fanciers in the United States. Men who have spent years in breeding high class birds and have been eminently successful. These lectures will furnish valuable information on subjects in which all poultrymen are interested.

Mrs. Bertha M. Story, of Oregon City, Ore., has been added to the list of state commissioners. She is an energetic,

You lose money at this season unless you keep lice off the fowls. Dust them with

J. W. Miller, Pres., J. W. Miller Co., Box 56, Freeport, Ill.

This individual collection of Columbian Wyandotte ribbons is, we believe, the largest in the country—195 ribbons; 76 firsts, 47 seconds, 27 specials, 21 thirds, 15 fourths, 9 fifths. These were won by the Columbian Wyandottes on Fenton Farm, Mt. Clemens, Mich. W. F. Fenton, Prop.

ment is kept busy answering questions. This is an indication that poultrymen are interested in the great enterprise, as they should be.

Minnesota is so sure of a large shipment of birds that the state commissioner, Mr. W. C. Ellison, has already secured a man to accompany the cars in which the birds will travel.

The International Stock Food Company of Minneapolis has sent a beautiful silver loving cup valued at \$25, which is to be known as the "Jewel Incubator Cup" and is to be given to the exhibitor having the best display of Buff Wyandottes. The cup stands about eight inches high, and is gold lined. It is beautifully engraved and well worth trying for.

The silver cup offered by the Lawrence L. Moore Company, of Seattle, has also been sent in. This cup is valued at \$50 and is to be presented to the exhibitor who wins first prize on the largest and best exhibit in the Asiatic class.

Others that have been promised will

wide awake poultry fancier and very popular among the breeders of her state. Her appointment insures a large exhibit from Oregon.

The commissioner for the state of Washington is doing good work and promises a very large collection of birds from this state. In fact, everything looks decidedly favorable for the largest and finest exhibit of this kind ever seen in the United States. It looks now as though every man worthy of being classed with the poultry fanciers will be represented at the great Alaska-Yukon-Pacific Poultry Show. They realize that no one with any pretensions to the title can afford to stay away.

The male bird should have some extra feed; being the gentleman of the harem he allows the ladies to eat first. You are apt to find him thin and weak. No wonder your eggs don't hatch. Give him careful attention, take him out of the pen for a day occasionally; plenty of green food is good for him.

GREAT LAYERS Poor layers, cocks that will breed layers, picked unerringly by the Hogan System of selection. Tested 1½ years at California State Experiment Station. Proofs free or send \$2, and promise to keep the knowledge to yourself, for 1908 edition. **Walter Hogan Co., 17 Bank Building, Fergus Falls, Minn.**

NATIONAL GOLDEN WYANDOTTE CLUB.

Our annual meeting was held in connection with the A. P. A. State Poultry Show at Cincinnati, Ohio, January 15, 1909, and was not only a delightful but enthusiastic one. The advancement of the club's interests, which are personal interests to each of you, was thoroughly discussed and actions taken whereby we, as a club, may be of benefit to you as an individual.

To briefly outline the policies for the coming year will say that the giving by the club of the five special ribbons to every poultry show where a member exhibits will be continued, and arrangements were made whereby a greater number of them can be given, and that without placing any restrictions upon the awarding of them other than they are to be competed for by members only. Silver cups will be given at one show in each state having a membership of ten or more. A catalogue, authorized by a vote of the members present, will be issued just as quickly as the data for same can be gotten together, one that we will endeavor to make interesting to every poultry breeder regardless of what variety or breed he may raise, one that you will be proud of, that will contain articles from the leading breeders of them throughout America, as well as articles pertaining to the Golden by noted judges and others. It is our desire to make this catalogue not only a work of art, but a work that will be useful and instructive to all whose interests center in the Golden.

The next national club meeting will be held at the New York show next season. At this early date we cannot give you much definite information regarding the specials to be given, but we already have the promise of one \$100 cup, and several other premiums of value. Arrangements will be made whereby every winner of a prize, even those winning fifth place, will receive a special—there will be something for everybody. We will also have our own special judge, who will be a man competent to handle the Golden, and who will not judge any other breed or variety, thus insuring good work in every particular. Remember that the officers will do much toward boosting the club, but we cannot do everything by any means without your sincere co-operation.

W. G. Smith, Secretary-Treasurer.

Bannock, Ohio.

If your chicks haven't unlimited range you should feed beef scraps to take the place of the bugs and worms they would get. We advise a hopper of beef scraps where they can get at it any time they wish to after they are three weeks old.

A few plum trees set out in the poultry yard now will in a few years not only furnish shade and an occasional plum for the poultry, but some luscious fruit and preserves for you as well. Do it now.

Plant some sunflowers now; they not only make necessary shade but produce a crop of seed, the most valuable grain for poultry, and also furnish their cheerful sunny bloom to cheer us when things go wrong.

STANDARD MANUFACTURING CO., ATTICA, OHIO

PRESERVING EGGS.

Interesting and profitable in the extreme is the preserving of eggs with Willett's Water Glass. A letter from Mr. E. C. Brinser, Lancaster, Pa., dated April 1, 1909, says: "I have myself used your egg preserver for the last four years, and have failed to find any fault at all, as every egg I put up opened in A No. 1 condition; some were in the solution for about ten months. * * * You certainly have the article, or I would not be giving you an order for another barrel, which you will receive in this same mail."

Look for "The Willett-Idea" ad in this issue.

One of the most commonly mispronounced words in the English language is "r-u-b-e-r-o-i-d." Most people called it rubber-oid, although the correct pronunciation is as though it were spelled "rue-ber-oid."

It is commonly supposed that Ruberoid is a "rubber" roofing, but nothing could be further from the truth. Ruberoid contains no rubber, and a roofing containing rubber would be practically useless, as rubber rots under slight exposure to the weather.

The base of Ruberoid is an exclusive processed gum known as ruberoid gum. This gum resembles crude rubber and is as flexible as crude rubber, but, unlike rubber, it retains its durability and flexibility after years of exposure to the weather.

Do not confuse the genuine Ruberoid with those cheap substitutes commonly known as "rubber" roofings.

The Norwich Automatic Exerciser and Feeder is getting a strong foothold on the market for the fact that it is a remarkably fine machine and meets the demand perfectly, for an automatic machine which may be relied upon to do its work properly.

By actual test the machine effects a saving of 20 per cent in feed, which at the present price of grain makes quite a perceptible difference in one's feed ac-

count; while the exercise given, and slow feeding necessitated by the action of the machine, all contribute to make the Norwich feeder a valuable adjunct in any yard.

The machine is sold under a strong guarantee, relieving the buyer from risk, for if the machine is not satisfactory the manufacturers do not ask the purchaser to keep it.

We predicted that the Norwich feeder was destined to become popular, and from reports of the manufacturers it surely is.

I am going to boarding school this winter and must have three school dresses, but have very little money to spend on them. Kindly suggest some material that will make up stylishly, that is inexpensive, and that I can make myself.

Farmer's Daughter.

I would suggest that you purchase Simpson-Eddystone Prints. If brown is becoming, select one of Fast Hazel Brown. Trim with neat collar and cuffs of white embroidery. Make another of Shepherd plaid and trim with bias bands of the same. For a third, choose an indigo blue design and use stitching for trimming. This will insure three very neat, stylish dresses that any girl may be proud of, and which you can easily make yourself. These materials have a beautiful lustre, and some a silk finish, so that while you have a serviceable dress that will wash, you will be surprised how much they will look like really expensive materials.

J. A. Bickerdike, Millersville, Ill., breeder of Bickerdike's Pedigreed White Rocks, is offering some of his breeding birds at the very low price of \$1 and \$2 each. These are surely bargains, and it will pay any one

interested in good White Rocks to write him. Mr. Bickerdike has bred White Rocks exclusively for nine years at Pleasant View Poultry Farm, uses Trap Nests the year round in all his yards, and is in position to give his customers good value for their money. Look up his ad in this issue.

Mr. J. I. Blake is giving a very fine catalog, to all who ask for it, of his famous Excelsior strain of Reds. This is a very valuable book to Red breeders. Mr. Blake's Reds were heavy winners at the great Red show held at Detroit by the National Single Comb Red Club; and also at Indianapolis. Mr. Blake has as fine Reds in his yards as is to be found in the United States.

E. E. Wilson, 921 Ashland avenue, Indianapolis, Ind.

Mr. Wilson is a breeder of Quality Single Comb Black Minorcas and he has just had the honor of being awarded the championship of the state of Indiana by the American Black Minorca Club. Mr. Wilson's birds have also won 110 regular and special ribbons during the year. His hen, "Elizabeth," score 96, which was first at Indianapolis, 1908, and first again as hen, 1909, has been pronounced by a number of prominent poultry judges as "Ideal," the most perfect specimen they ever saw. Mr. Wilson advertises in American Poultry Journal; look up his ad in this issue.

T. A. Myers, York, Pa., has perfected a system of feeding of fowls whereby the feeder can obtain a plentiful supply of eggs at a time when they are most in demand and prices are highest. Send a postal today and he will give you further information.

Bromo-Seltzer! How familiar this sounds to tens of thousands of people all over the world who have been relieved of nervous headache, mental exhaustion, nervous dyspepsia and disordered stomach. All of these ailments and many others are relieved almost instantly by Bromo-Seltzer.

It makes a very palatable drink and has a soothing effect. For sale by druggists everywhere.

FIRST LESSONS IN POULTRY KEEPING

We may safely claim that never before in the history of poultry literature has any publication so thoroughly and systematically handled the subject of proper poultry keeping. Beginning with the elementaries—the very first principles—the student has been taken along step by step, each lesson followed by the next in its logical order. This policy of "begin at the beginning" enables the laying of a solid foundation of useful knowledge, the necessity and value of which for future success, cannot be overestimated. The following list, a complete "lesson" being devoted to each subject, will help you to form some idea of its great value.

- Winter Rations for Laying Stock.
- The "Hows" and "Whys" of Feeding Laying Stock in Winter.
- General Principles and Rules for Poultry Breeders.
- Putting Principles of Breeding into Practice.
- Hatching Chicks With Hens.
- Rearing Chicks With Hens.
- The Care of Chicks from Weaning to Maturity.
- Points to be Considered in Poultry House Construction.
- Two Plain Cheap Poultry Houses of Simple Construction.

- Five Good Small Poultry Houses.
- Summer Management of Fowls.
- Continuous Poultry Houses.
- Incubator Rooms and Brooder Houses.
- Simple or So-Called Scientific Poultry Feeding.
- Poultry House Fixtures.
- Poultry Fences and Yards.
- Getting Ready for Winter.
- Selecting and Fitting Exhibition Birds.
- Fattening Fowls.
- Selling Market Poultry and Eggs.
- Selling Thoroughbred Poultry and Eggs.

The price of the book alone is 50c, postage prepaid, but note our great SPECIAL OFFER of a yearly subscription to Farm-Poultry, the great National poultry paper, and a copy of "First Lessons in Poultry Keeping" for only 75 cents. (Price to Canada, 90 cents)

This offer is made you strictly on approval. If for any reason you are dissatisfied return the book in good condition and your money will immediately be refunded without any comment whatsoever. We know that you would not part with this book for ten times its cost if another copy was not procurable. We can hardly conceive of anyone overlooking this opportunity who desires practical, thorough, systematic and dependable instruction on poultry keeping. To obtain the benefit of this splendid combination you must send orders and remittance to

FARM-POULTRY PUB. CO. :: Room A, BOSTON, MASS.

Don't Judge a Roofing By Its Looks

On the surface, most ready roofings look the same.

But the weather finds the hidden weakness.

The weather finds the vegetable fibers in the fabric and rots them.

The weather finds the volatile oils which are concealed below the surface. The sun draws these oils, in globules, to the top of the roofing, where they evaporate in the air.

Where there was a globule of air, there remains a hole. And behind each hole is a tiny channel which lets the weather and water into the very heart of the roofing.

When the sun and the wind and weather have sought out the hidden weaknesses, the roofing is porous, instead of solid; watersoaked, instead of waterproof.

You can't tell by looks, which roofing will last twenty years, and which will go to pieces in a single summer.

Seventeen Years of Service

But you can do this: You can tell the original Ruberoid roofing—the only roofing which has lasted seventeen years—from the 300 substitutes which have proven their unworthiness.

Ruberoid was the first ready roofing. Its basis is the best wool felt impregnated with Ruberoid gum.

It is this wonderful flexible gum which no other maker can duplicate.

It is this gum which gives Ruberoid all the flexibility of rubber without containing an iota of it. It is this gum which withstands wind, weather, sun, fire, acid, gases and fumes, where all other compounds fail.

It is this gum, in the Ruberine cement which accompanies each roll of Ruberoid roofing, which makes ours practically a *one-piece* roofing—sealed against leaks—sealed against the weather.

Ruberoid comes plain and in colors. The attractive Red, Brown and Green Ruberoid are fine enough for the costliest home. And the color feature is exclusive—protected by U. S. and foreign patents.

In the past twenty years we have had experience not only with all ready roofings, but with other roofings—shingles, tar, tin, iron and other roofings.

We Test All Roofings

Each roofing we have exposed to the weather test, on our roof garden at Bound Brook, N. J.

The result of these twenty years of tests we have written into a book which will be gladly sent you free.

This book is a gold mine of roofing information, telling about the advantages and disadvantages of each roofing for each purpose. To secure a copy, address Dept. 77B The Standard Paint Company, 100 William Street, New York.

RUBEROID

(REGISTERED IN U. S. PATENT OFFICE)

Be sure to look for this registered trademark which is stamped every four feet on the under side of all genuine Ruberoid. This is your protection against substitutes which many dealers brazenly sell as Ruberoid. Ruberoid is usually sold by but one dealer in a town. We will tell you the name of your Ruberoid dealer when you send for our free book.

W. H. WIEBKE, Box P 348, FORT WAYNE, INDIANA

T. F. POTTER & CO. BUY OUT THE BUSINESS OF THE MORGAN SANITARY HOUSE COMPANY OF LEMONT, ILLIONIS.

During the month of May a deal was made between T. F. Potter & Co., of Downers Grove, Ill., and the Sanitary House Company, of Lemont, Ill., whereby the former company takes over the business formerly carried on by Jesse E. Morgan, of the Sanitary House Company of Lemont. The full line of portable poultry houses, brood coops, pigeon lofts, etc., formerly made by the Sanitary House Company will be added to the line of goods already manufactured by T. F. Potter & Co., and old customers who have been buying goods of the Sanitary House Company are requested to address their orders and correspondence relating to these goods to T. F. Potter & Co., Downers Grove, Ill.

By adding this line of portable houses to the line of poultry house fixtures and other supplies formerly made by the Potter company, they now are able to offer the most complete line of portable houses, fixtures, etc., of any firm in the country. Six or eight different styles of portable houses are made, and these, together with the three different styles of fixtures for

First S. C. Buff Leghorn cock at Minneapolis, St. Paul and State Fair. Bred and owned by Buff Poultry and Bee Farm, Austin, Minn.

poultry houses, make a complete line, and poultry raisers who are in the market for goods of this class should not fail to send for their large 100-page catalog of fixtures and supplies and supplementary catalog describing the line of portable houses, etc.

The business of the Sanitary House Company has been established about eight years, which is about the same time that Potter & Co. have been in business, so all of their goods are well and favorably known and extensively used by poultry raisers all over the country. Potter & Co. are also the originators of the Potter system of selecting laying and non-laying hens which is used by over 25,000 poultry raisers, and their advertisements are found in all of the large poultry journals. Their ad is in the current issue of this paper, and interested subscribers are requested to write them for their catalog and circular matter.

Mr. F. O. Wellcome, the "Ideal" trap-nest man, Box J, Yarmouth, Me., is offering a special summer discount on his well known trap-nest specialties. This is probably the very best time of year to install trap nests. Their use at this season has special advantages, and one can become thoroughly familiar with the system before fall. Write to Mr. Wellcome for his free printed matter, mentioning American Poultry Journal.

75c

Pays for one year's subscription to American Poultry Journal and a copy of "How to Build Poultry Houses"—A 64-page book on poultry house construction.

MITES AND CHICKEN LICE.

The above topic is of such vital interest to all those who have anything to do with the keeping of poultry, whether on a large or small scale, that it would be difficult to find a poultry paper which did not devote considerable space to the subject. In spite of the fact, however, that the question has been dwelt upon at great length by some of the most experienced poultry raisers, it is one which always affords new avenues for discussion.

No one will dispute the fact that the individual who would make the most out of his poultry, and wishes to attain to any degree of success, be he either an experienced fancier or an amateur, must needs see to it that his fowls are kept in sanitary quarters and free from vermin of every kind. Therefore, as this matter is of much importance, it behooves every one who is at all interested in or cares for the comfort and welfare of his feathered friends to devise or discover means

WHAT IS AXLE GREASE WORTH?

Who stops to think that axle grease cuts any figure in business economy, or that there is a difference between grease and grease—some being better, others worse? Yet it's a fact that the adhesive quality of an axle lubricant or its ability to wear will raise or lower the expense account of a great city's commerce by a very considerable sum every year.

If you doubt it, stand for an hour on any busy corner and count the truck loads of merchandise moving toward railway terminal or steamship pier. Estimate, if you can, what it would mean to each shipper in time, and team and truck-wear, if there was a little fraction less of friction required to move each load.

Think what an application of Mica Axle Grease to the four wheels of every dray and truck, large and small, would do toward hustling things. Why! It would

by which he can effectively combat this enemy of the poultryman. Here, however, is where the average poultry raiser encounters difficulty, and consequently is generally anxious to learn of the experiences of others in order that he may if possible improve upon the methods he is now employing.

There are at the present time a great many different kinds of preparations on the market which, if applied in sufficient quantities and at frequent intervals, are more or less effective. They generally are all right in so far as offering temporary relief is concerned. But what the poultryman of today is looking for is something that will not only do the work satisfactorily, but one that will prove permanent in its results. A preparation meeting such demands we find in *avenarius carbolineum*. It is merely necessary to paint the inside of a poultry house once with *avenarius carbolineum*, and same will be free of mites and chicken lice for a whole year. For further information address: Carbolineum Wood Preserving Company, Carbolineum building, Milwaukee, Wis.

mean dollars—good dollars and many dollars, to every merchant and manufacturer; because "Mica" is the greatest killer of friction on wagon axles ever known.

Any grease is better than no grease, but no grease is better than—or as good as—"Mica." Probably if you found opportunity to interview a few busy dray-drivers they would tell you that they know "Mica" is all right because they use it—and if you asked further why it's all right, they would say, "Oh! it stays on, it wears better than any other grease and it makes a truck run easy."

There you have it! It stays on, and it makes wheels turn easy. No wonder more Mica Axle Grease is sold than of all other kinds combined.

Peter S. Hurt, Thornton, Ind., the well-known breeder of Single Comb Buff Leghorns, reports that he now has hatched all the chicks he can accommodate and to those who will mention American Poultry Journal he will now give a 50 per cent discount on eggs for hatching. Better place your order at once.

EUREKA Harness Oil

Every Chick Its Own Doctor

The Automatic Greaser

Greases Chickens' Heads. It works while they eat. No escaping the healing touch of the vermin-killing grease. Kills Mites, Fleas and Red Bugs. Keeps off Mosquitoes. Makes every chick its own Doctor. No chemicals. No special liquids. Uses mixture of Coal Oil and Lard Oil. Made entirely of metal.

WRITE TO-DAY FOR OUR '09 FREE SQUAB BOOK

Handsomely printed and illustrated, telling How To Make Money Breeding Squabs. (Our cloth-bound book now sent has 303 pages, 114 pictures, biggest and best we have ever issued. It's great.) See 1909 particulars and prices on Plymouth Rock Homers and Carneaux; ask for special offers, all transportation charges prepaid. We were the first, the originators. Trade with us, get the benefit of our years of experience and skill. The greatest success of the 20th century in feathers. Read about it. **Plymouth Rock Squab Co.** 188 Howard St. Melrose, Mass.

Millions of squabs are now going to market. Real stories of customers who started small with our profitable pairs and now have big flocks.

From eggs to squabs in 4 weeks, then killed, weighing up to a pound.

FAMOUS POULTRY BREEDER GIVES ADVICE.

In answer to many inquiries asking me what I consider to be the best way of starting in the poultry business, whether with stock or eggs, will say: A great deal depends on the beginner's financial condition. The purchasing of stock is desirable under certain conditions where the saving of money is not the object; but for the man in moderate circumstances I would strongly advise the purchasing of eggs from a reliable breeder—first, because it is more economical; secondly, because the novice will be able to start at the very beginning and grow up with the business, and by so doing he will learn by practical experience the many lessons in A B C poultry culture that will prove of the greatest possible benefit to him later on as his flock increases in number. I have been in the poultry business a great many years, and think I know some of the ups and downs of the business. I have never persuaded any one to go into the poultry business without also giving him some idea of how to take care of the little fellows when they are hatched. Do you realize this is the greatest "pitfall" a new beginner has? In fact, many of the older breeders are in the "pit" yet. I think it safe to say that 75 per cent of the chicks hatched die with bowel trouble, balling

up about the vent, cholera, etc., etc. Many a man has given up the poultry business in disgust because of this most aggravating of all poultry troubles. Some years ago I myself felt prompted to throw the business up, in despair, having tried and experimented with every known remedy, all to no avail. Now that you ask me to write an article for the new beginner, I want to give that new beginner the benefit of my experience. I have lost little chicks by the thousands from bowel trouble, but about five years ago I commenced feeding them what is known as medicated charcoal, and since that time we seldom lose a chick. When we hatch out a certain number of chicks we have reasonable assurance of bringing them through to maturity. I know positively that 90 per cent of the people who fail to make a success of the poultry business will admit it to be on account of either roupe or bowel trouble in chickens, such as balling up about the vent, white diarrhea, cholera or dysentery. These troubles can be guarded against and cured if gone about right. Medicated charcoal is the one thing to have on hand and it can be gotten from the Des Moines Incubator Company, at Des Moines, Iowa. I don't recall just what the present price is, but if interested you can write a line to this concern and get all particulars.

I believe that while we try to persuade people to go into the poultry business we should at the same time familiarize them

with some of the trials they will meet with, and thus save them much unnecessary disappointment. In conclusion I will say I have found the poultry business pleasant, agreeable and profitable and would not change for any other business I know of.

F. J. Tishenbanner,
Manager Iowa Poultry Yards.

HOW ABOUT OILING THE HARNESS.

Harness oiling is a rainy-day job on the farm and a regular part of stable work in the city.

It's a vitally necessary part, too. There's no trouble about spoiling a harness—the question with horse owners is how not to spoil harness.

A very little use in all kinds of weathers works a great change in the flexibility and "snappishness" of harness leather. It gets hard, dry, lifeless—crossed and recrossed with little checks which eat into the leather and soon bring it to the breaking point.

Every man who owns or drives a horse knows these conditions and knows that the preventive and cure is "oiling"; but every

A prize-winning White Wyandotte cock. Bred and owned by Ira C. Keller, Prospect, O.

such man doesn't know that, from an economical standpoint, Eureka Harness Oil is the only oil worth using.

We say that advisedly—"Eureka" is the most economical harness oil, and here—outside the fact that it never becomes rancid and contains nothing injurious to leather—is the real reason.

Eureka Harness Oil has the quality or power of "staying put." It goes into harness leather and it takes a lot of wind and rain, and animal sweat, to drive it out. It stays better than other oils. It gives a glove-like texture to leather that adds wonderfully to its wearing qualities. And it improves the appearance of the harness by keeping it black, which means keeping it new-looking.

Of course, if you use oil that keeps a harness soft and pliable twice as long as another, it's the cheaper of the two, and that's why it pays to try Eureka Harness Oil.

Gentlemen: The car of lumber you shipped us on March 11 has been received and unloaded. We are much pleased with same. The quality of the lumber is first class.

We have easily saved \$100 on this order. We expect to have our barn completed by the first of July. If you have any customers in this vicinity who wish to see the lumber or barn after it is completed, direct them to us and we will show them around.

Wishing you much success, I beg to remain,
(Signed) Myles Roach.

Amatite

ROOFING

TRADE MARK

Five Roofings Tested.

Gentlemen: Oakford, Pa., February 15, 1908.

The Amatite Roofing you advised me to try has proved to be the best roofing I have on any of my chicken houses, having tested it for two years with four other roofings. Consequently, when I was compelled to buy a new roof on my wagon house, used Amatite.

If you see fit to use this letter as a testimonial, you will be doing the chicken fanciers a great benefit.

If anyone wishes to see how the roofing lasts I will be pleased to have them visit my farm.

Hill Crest Farm,

Yours truly,

William F. Foterall.

This is the kind of letters which we get daily regarding Amatite.

When it was first put on the market a great many people were attracted by it, but did not wish to spend all their money in a new type of roofing, so they used some Amatite with the old-fashioned "smooth surfaced" roofings right alongside so as to get a good comparison of their durability. Now they are finding that Amatite without any painting lasts longer than other roofings that need continual painting, and they are writing in letters like the above.

Amatite has a surface of real mineral matter which will not rub off or wear off, as the coal tar pitch which holds it in place is a powerful adhesive.

The price of Amatite is very low. The smooth surfaced roofings sold at the price of Amatite are usually a one-ply or half-ply grade which is very flimsy and light in weight, and do not compare with Amatite, which is five-ply. Amatite has a double layer of Coal Tar Pitch, a double layer of wool felt, and a real mineral surface.

Free Sample and Booklet

Send for a sample of Amatite and see what the mineral no-paint surface looks like. You'll then understand why it is so much better than "painted roofing."

A WOMAN'S IDEA OF SUMMER COMFORT.

To every woman, especially the woman who keeps house, the topic of summer comfort in the home is one of never-failing interest.

This is particularly true where comfort in the kitchen is concerned, as it is in this one room that the most trying part of the work is done, such as cooking, baking, ironing and heating water for wash-day purposes. Even in cool weather such work is not altogether welcome, but it becomes drudgery on days when the mercury is trying to jump through the top of the thermometer, aided by a hot stove that diffuses its almost unbearable heat through the kitchen.

But such days are past. With the New Perfection Wick Blue Flame Oil Cook Stove kitchen drudgery becomes kitchen comfort, for this wonderful stove is so constructed that it not only produces quick results, but does it all without perceptibly raising the kitchen temperature.

All this means real comfort to the woman who works in the kitchen, especially when considered with the added advantages in the saving of time; in the doing away with all carrying of coal, wood and ashes; in having a stove that can be turned on or off, high or low, as required; and in not having to keep it lighted when not in use.

Then there is the saving of fuel to be considered; and it is here also that the New Perfection excels. Although equipped with three burners it has but one oil reservoir, thus reducing three separate filling operations to one.

Besides all this, the "New Perfection" is the only oil stove built with a cabinet top. Its commodious top shelf is particularly useful for warming plates and keeping food hot after it is cooked. In addition there are two drop shelves on which may be set the teapot or coffee pot and small cooking utensils. Also has two racks for holding towels.

Altogether the "New Perfection" is a stove of wonderful utility. Its extremely handsome appearance sets off any kitchen to full advantage. It is superior to the hot coal range, no matter what the point of comparison may be—or whether regarded as a summer stove only or as a stove for year 'round use.

Another household article of unusual convenience is the Rayo Lamp, a scientifically constructed lamp that will adorn any room—whether library, parlor, dining-room or bedroom. The Rayo Lamp gives a mellow, steady light that does not tire the eyes. Its center draft burner of the latest design and its fine porcelain shade make it a lamp of combined usefulness and beauty.

The New Perfection Wick Blue Flame Oil Cook Stove and the Rayo Lamp constitute two household articles that will meet any woman's idea of home comfort. In the thousands of homes in which they are already used they are making things cheerful because of their absolute safety, great simplicity and wonderful convenience.

SPEND ONE CENT FOR THE BELLE CITY INCUBATOR BOOK.

If you want to get the biggest bargain of your life, spend a penny for a postal to get the Belle City Incubator Book, "Hatching Facts."

When you get this book study it carefully. It explains all about incubators and brooders in a different way from any other incubator book published.

Mr. J. V. Rohan in his own interesting words tells you how to start right in the poultry business and how to keep right. Here is his style of writing—and you will notice how interesting and how logical he writes:

"I suppose there is no subject—not even politics—upon which so much 'tommy rot' and foolishness has been written in the past ten years as upon the subject of incubators and incubation.

"The arguments used convey the impression that there is something extremely mysterious and perplexing about the art of hatching eggs; that it can only be done under certain conditions, requiring the use of an incubator with some peculiar gim-crack to it, or painted some particular color. Of course, there is a whole lot of foolishness about it, and yet some truth.

"There is big money in poultry—not a million but a good, fair profit. Most anyone with a reasonable stock of common sense can make poultry pay.

"Hatching eggs is not quite so simple as boiling them, but neither is it a task requiring a special scientific education and a lot of scientific instruments. I

have been in close touch with the poultry business all my life—especially the hatching and brooding end of it—and the larger my experience, the more firmly am I convinced of these two things:

"You need not pay a fancy price for a complicated 'scientific' machine in order to get an incubator that hatches perfectly.

"It is folly to expect a cheaply constructed, shoddy machine made by men with no poultry experience to do satisfactory work for you.

"By remembering these things you'll raise more poultry and make more money."

The whole book is written in this simple, straightforward style. Every word is easy to understand, and best of all—he tells you how he saves you \$4 on the famous Belle City Incubator and Brooder. Be sure to get this book. Simply say on a postal card, "Send me your 'Hatching Facts'." Address the postal personally to Mr. J. V. Rohan, president Belle City Incubator Company, Box 27, Racine, Wis., for prompt attention.

AWAY WITH THE MEDICINE CHEST.

The day of the poultry medicine chest, with its separate remedy for each and every ill, is gone. The investigating poultry-keeper knows that if his stock is kept in a healthy state—that is, nothing more or less than normal—there need be no ailments in his flock.

Scientists of an investigating turn of mind have probed this matter very thoroughly and have learned that all that is necessary is to provide Mrs. Industrious with a few of the natural elements from which she is barred by reason of unnatural conditions—due to captivity.

Among the best of such preventives that have come to our notice, is Wilbur's Poultry Tonic, which is rightly termed "the world's greatest egg-maker." It does not stimulate the hen's reproductive organs to an abnormal extent—rendering her incapacitated in a short time—it is simply composed of what the hen really needs—what her organism demands—and without which she cannot fulfill her proper functions.

Such unbounded faith have the Wilbur Stock Food Company, 631 Huron street, Milwaukee, in this product that they will send a \$1 package free of all charge, where they have no agent, to anyone sending in the coupon to be found in their advertisement in this issue.

FREE SAMPLE OF AMATITE.

Many of the readers of this paper may not know that the makers of Amatite Roofing distribute free samples for the information of prospective purchasers.

Some of our readers have probably doubted that a roofing could be made which would need no painting, and the sample of Amatite is convincing evidence that a practical mineral surface has been invented.

Sending for the free sample does not entail any obligations and there is no charge—not even for postage. With the sample is sent a little book telling all about Amatite and showing pictures of roofs in all parts of the country where Amatite has given protection without painting for many years.

Just drop a postal card to the nearest office of the Barret Manufacturing Co., New York, Chicago, Philadelphia, Boston, St. Louis, Cleveland, Pittsburg, Cincinnati, Minneapolis, Kansas City, or New Orleans.

Farm fence for 15 cents a rod up. See Kitzelman Bros.' ad in this paper.

Plan for Summer Comfort

Don't add the heat of a kitchen fire to the sufficient discomfort of hot weather.

Use a New Perfection Wick Blue Flame Oil Cook-Stove and cook in comfort.

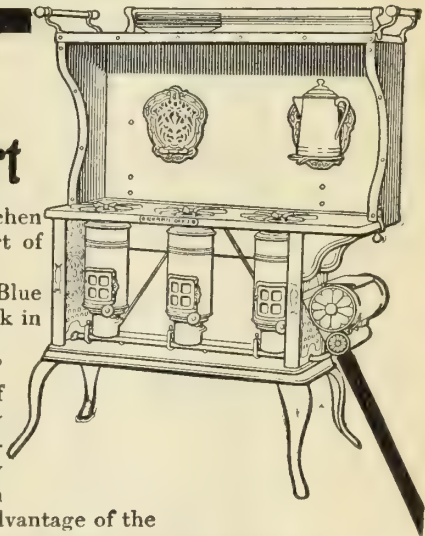

With a "New Perfection" Oil Stove the preparation of daily meals, or the big weekly "baking," is done without raising the temperature perceptibly above that of any other room in the house. Another great advantage of the

NEW PERFECTION Wick Blue Flame Oil Cook-Stove

is its handsome CABINET TOP, which gives it every convenience of the modern steel range. Has an ample top shelf for warming plates and keeping cooked food hot, drop shelves for holding small cooking utensils, and is even fitted with racks for towels. Made in three sizes, and can be had with or without Cabinet Top. If not at your dealer's address our nearest agency.

The **Rayo Lamp** gives perfect combustion whether high or low—is therefore free from disagreeable odor and cannot smoke. Safe, convenient, ornamental—the ideal light. If not at your dealer's address our nearest agency.

ORPINGTONS.

LOOK! 300 JANUARY HATCHED White Orpingtons, now ready to lay, \$5 per trio. Cockerels, sons of pullet that layed 113 eggs before year old, \$2.50 each. Show pullets and cockerels ready for state fairs, \$5 each. We breed scientifically for eggs as well as show points. In Bufts we imported Frank Sisson's two best pen-hens weighing up to 12 pounds each, with wonderful soft even color and under-color, immense bone. We sell eggs from these wonderful birds at half price now. Here is opportunity for people living north of Ohio river. We hatch all summer; why not you? In Blacks our best pens remain intact and eggs are now half price. We have bred and sold such Blacks—No. 1st that won first at Madison Square, Boston, Cleveland, and we have better birds now than we ever sold. Remember our cheapest pens are headed by show cocks. No plant in America operates on closer margin of expense—no big salaries, no brass band—just quality. You will pay some breeders \$10 per sitting for poorer eggs than we sell at \$3. Our highest priced eggs cannot be duplicated at any price. Our catalog and bargain sale leaflet tell more and are free. Brown & Coleman, Station L, Cincinnati, Ohio. 6-3

ORPINGTONS SACRIFICED, including this spring's hatches. Magnificent Cook Tennyson-Fawkes Black cockerels cheap. Elmdale, Box 573, Oklahoma City, Oklahoma. 6-3

American Standard of Perfection**LATEST EDITION**

No poultryman can breed fowls intelligently without this book. It tells you what the different varieties of fowls must be to conform to the regulations of the American Poultry Association. This book is the guide by which all poultry judging is done.

It contains ideal drawings of the different varieties of fowls, gives the Standard weights, colors, markings, etc. In fact, is the poultryman's encyclopedia.

Order one today and learn to your own satisfaction if your fowls are up to Standard requirements.

"Ringlet" First Prize Sweepstakes Exhibition Pen at Madison Square Garden, New York.

"RINGLETS" STAND ALONE, VICTORS OF THE FIELD . . .

At America's Imperial Show, Madison Square Garden, New York, Winters of 1908-1909 . . .

E. B. THOMPSON'S BARRED P. ROCKS

As usual win the leading prizes and achieve the highest honors that can come to any breed. First prize on cockerel, first prize on cock, the Great National Silver Cup presented by the American Plymouth Rock Club for best cock, cockerel, hen and pullet. Double the number first prizes of any competitor. Special for best shaped male, special for best headed male, special on hen, special on pullet, the Sweepstakes Special in Gold for best Plymouth Rock on exhibition of either sex and any variety. The Imperial prize of the show, special for champion male.

At the 1909 New York Show my 1st Prize Sweepstakes Cup Exhibition Pen was Declared by Expert Opinion to be the Finest Ever Exhibited. A Paragon of Perfection. The Sun Never Before Shone on Such a Masterful Exhibit.

For more than twenty years at New York my "Ringlet" victories have been complete. Exhibited by me personally they have won a grand total of 127 prizes, 69 of these being firsts and specials, being more first and special prizes than won by any competitor in the history of the show. These include the \$100 Champion Challenge Trophy, won three times; the \$100 Association Cup, won three times; the \$100 Sweepstakes Cup offered by the President for best Plymouth Rock cock, cockerel, hen and pullet, any variety.

The "Ringlet" world's record at New York four years in succession is a page of history. The "Ringlet" record of first on exhibition pen three years in succession is the undisputed Champion. My Clean Sweep of FIRST, SECOND, THIRD, FOURTH AND FIFTH PRIZES on pullets has never been approached in Madison Square Garden, and stands alone and unequalled.

One thousand grand breeding cockerels for sale; elegant hens and pullets in any number. Show birds fit to win in any competition. Richly illustrated 50-page catalogue upon request; it is full of original pictures of New York winners from life. EGGS from the world's finest exhibition matings, one setting \$6; two settings \$11; three settings \$15; four settings \$18. Address

REDS

"HE IS THE BEST RED I EVER SAW," said of my Chicago King by Judge Thos. F. Rigg, the highest authority on R. I. Reds, who has for years awarded the prizes at such shows as N. Y., Boston, Chicago, Cincinnati. Eggs half price after June 15. \$1.50 to \$10 per sitting. Both Combs.

EDWIN R. CORNISH

EDWARDSBURG, MICHIGAN

Line bred for heavy winter egg production. Greatest layers of high priced market eggs in the world. Free circ. of stock, eggs and day old chick.

WILLARD J. THORNILEY, Life Member A. P. A., MARIETTA, OHIO

FOR \$5 DOWN AND \$5 MONTHLY YOU CAN GET 5 ACRES OF LAND AT \$100

in one of the best sections of the United States for poultry culture. The clean, dry soil and mild climate inducing winter laying and early broilers is attracting progressive poultrymen to this beautiful section of Southern New Jersey, near Atlantic City—the greatest seashore resort in the world—and near other New Jersey Winter and Summer coast resorts, an unlimited market that pays highest prices for eggs and poultry. Two main line railroads and large river afford excellent shipping facilities to Atlantic City, Philadelphia, New York and the best markets in the world. 12,000,000 people within radius of 150 miles to feed.

Raising chickens, ducks, squabs, vegetables, fruits, berries and grapes is now a thriving industry in Southern New Jersey

Fertile soil—pure air—excellent water—title insured—restricted to white people only.

Nature made only one crop of this land. It is growing scarcer every day. Write today for our illustrated booklet, giving complete particulars. Do it now. Such an opportunity may never come to you again.

Daniel Frazier Co. - 691 Bailey Building - Philadelphia, Pa.

SENSATION FOR JULY

IS OWEN FARMS' HALF PRICE SALE

Half the birds in our breeding pens are for sale after May 15, for just half their value Feb. 1st, prior to the egg season. Males and females in all varieties and in any number, now

\$2.50, \$3, \$4, \$5 to \$15 each

worth \$5, \$6, \$8, \$10 to \$30 each

These birds will be carefully mated for best results, are in perfect condition, and you can secure plenty of chicks from them this year.

June and July hatched chicks are always the best colored of the year, and properly reared they grow into winners for the January and February shows.

These birds are all line-bred from the leading winners at New York, Boston, Chicago and the other great National shows. They have the best blood lines in America and are what you want to help you reach the top.

Each year we have sold hundreds of birds for half price during June and July. This year we will give our customers the advantage of two weeks more breeding from these fine birds. Prompt early orders will give you full advantage of this offer.

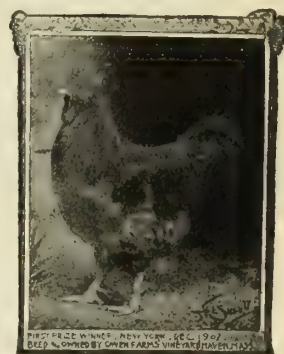

REMEMBER, every bird that does not please at the price paid can be returned at our expense and money will be cheerfully refunded. Varieties are **Buff and Black Orpingtons, Barred, Buff and White Ply. Rocks and White Wyandottes.**

Send us the amount you wish to pay and secure prompt shipment after May 15th. Catalogue and mating list are free. Please mention this paper. Address

THE OLD RELIABLE
LAMBERT'S
DEATH TO LICE

is the "real" article that has stood the test for 25 years. Has no superior for destroying lice. It saves the hens and increases Poultry Profits. Try it and be convinced. Sample 10 cts. If your dealer cannot supply you, send us his name. "Modern Poultry Problems" mailed for 2c stamp.

O. K. STOCK FOOD CO.,
415 Traders Bldg., - Chicago.

Send Us \$1.00 and We'll Ship You a Gallon of Red Label Lice Killer and a Star Pump on Ten Days' Trial

The Star Force and Spraying Pump is made of solid Brass—double-acting piston. Agitator at bottom to handle mineral paint, whitewash, etc. Use it for spraying trees, flowers and lawns. Spray your Cattle, Hogs or Poultry Houses with it. Handy for washing autos, buggies or windows. Non-clogging spraying device. No valves to leak. No washers to wear out.
Kills Lice Over Night Don't handle the birds—simply paint the roosts and dropping boards with Red Label Lice Killer—full strength—fumes kill the vermin. Next day spray inside of poultry house with mixture "Red Label" 1 part, water 20 parts, and all lice and mites that escaped the fumes will be killed, and house disinfected. The easiest, cheapest and surest way to kill lice and mites.

Send \$1.00 (draft or money order) for a gallon of Red Label Lice Killer and a Star Pump. Express prepaid anywhere east of the Rockies (except Arizona, New England States, New Mexico and South Texas). Use ten days. If satisfactory, remit \$4.00, the regular price of the pump. If not O. K. in every way, return the pump at our expense. This is an introductory offer.

Moore Chemical & Mfg. Co., 831B S.W. Boulevard, Kansas City, Mo.

All brass except foot and handle. Throws a stream 40 feet

NOW YOU CAN RAISE SUMMER CHICKENS

Nutrum Salts makes it possible. Bulletin

No. 2 tells why. If your Chickens are not living well or growing rapidly, send for a free copy of the Bulletin.

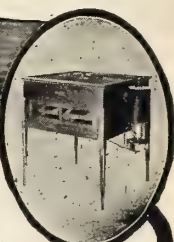

My discovery has also made easy the growing of broilers and soft roasters in the fall and winter for the time of high prices.

Model Incubators hatch every hatchable egg. Model Brooders, with Nutrum Foods, raise every chick. If you are raising poultry and do not know about this wonderful discovery, Nutrum Salts, you had better inquire.

I make everything the practical poultry raiser needs. Model Food Boxes, Drinking Fountains, Lice Spray, Lice Dust, Sulphur Candles, Roup Cure, Cholera Cure, Disinfectant, Scaly Leg Ointment, Poultry Remedies, Fly Driver, Naphthalene Nest Eggs, Toe Markers, Poultry Foods, Etc. All of the same high quality as the Model Incubators and Brooders which you will soon be wanting.

Get busy now. It's your opportunity.

CHARLES A. CYPHERS, President, Model Incubator Company,
301 Henry St., BUFFALO, N. Y.

Diseases of Poultry

—BY—

D. E. SALMON, D. V. M.

Chief of the United States Bureau of Animal Industry

Every poultryman should have this book in their poultry library. It contains 250 pages, and every disease to which fowls are subject is treated in a most thorough manner. The cause, symptoms and cure of each disease is put before the reader in such a manner as to be understood at a glance. With this book in hand you can be your own poultry doctor. Better order one now and not wait until your fowls become ill.

THE PRICE IS ONLY FIFTY CENTS

Will send this book and American Poultry Journal one year for only 75 cents. Send all orders to

American Poultry Journal Pub. Co.
358 DEARBORN STREET - CHICAGO, ILLINOIS

Delventhal's Buff Rocks

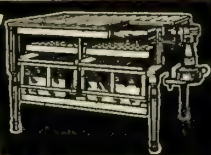

After June 1st will sell eggs from my St. Louis and Kansas City winners at \$2 per setting. Breeders for sale after July 1st. Send for booklet. : : :

E. L. Delventhal : : Box A : : Warrenton, Missouri

RECORD BOOK *FREE*

It will show you how many eggs were laid today, how many chickens you are hatching, how many you raise and sell, and just what each hatch nets. Men who are succeeding in other lines of business keep such records. Why should not you, when we start you free?

Ertel's Poultry Diary has hundreds of money making pointers for the poultry man—how to have eggs and broilers to sell when prices are high—how to raise the heaviest fowls—how to take care of the flock—how to treat sickness. The Diary tells about our new side regulators. They leave the top of the incubator entirely clear. Other improvements follow the suggestions of U. S. Department of Agriculture experts. We make low prices. We pay the freight. Get Ertel's Poultry Diary and watch the progress in incubator construction. It costs only a postal and may save you a mistake in purchasing an out of date machine. Better write us today. **GEO. ERTEL CO., Quincy, Ill.** Established 1867.

HOT? COMPETITION? NEW YORK SHOW

It was the hottest competition ever brought together in WHITE WYANDOTTES, but that is what my birds want and why I won the big end of it. They have the habit! That's a feature you want in your flock, so as to be in the firing line, challenging all comers. I shall dispose of some fine breeders this summer and shall have for the fall fairs the choicest stock I ever had. If you want to be "in it" better take up the matter now. It is none too early to get a line on the best. Stock for sale at all prices.

Write your wants to the breeder who has made possible the world's best flocks. Catalogue sent for 10 cents.

Make Money Growing Fruit

The scientific growing of fruit offers today the finest opening in the entire line of farming operations to one who wants to get ahead in the world financially, and at the same time build a home and have surroundings which will make life worth the living. The growing of fruit has now become a science and success will surely crown the efforts of one who enters this field, makes a careful study of the industry and follows teachings of many growers who make big money on fruits.

THE FRUIT-GROWER ST. JOSEPH, MISSOURI

is the leading magazine devoted to horticulture. It contains monthly as high as eighty pages of up-to-date illustrated matter, which places its readers in position to earn maximum profits on fruit. In some sections orchard land owned by Fruit-Grower readers is sold as high as \$4,000.00 per acre, and in many sections it is being sold at one thousand to two thousand dollars per acre. In no other branch of farming can land values be made so high. The lands mentioned above are worth the money, as they pay interest on the amount.

FREE LAND INFORMATION

Among the many departments in the interest of our readers is "The Fruit-Grower Land and Colony Department." It is our aim to give complete, authentic information in regard to lands in any section of the country where our readers may contemplate purchasing. This advice will be worth thousands of dollars to anyone who figures on buying land for investment or for a home. The editor of The Fruit-Grower has personally inspected many fruit-growing sections, and we are in position through our subscribers to secure reliable data regarding any section on the continent.

For several years we have been trying to secure a fine tract of land to be colonized by members of The Fruit-Grower Family. Numerous tracts have been offered us, but after sending experts to examine each in regard to soil, climatic conditions, etc., they did not come up to our standard of excellence. We will not use anything but the very best possible location for this colony, and we hope to secure the proper one in a short time. If you are interested in purchasing land either for a home or for investment, fill out blanks below and send in with our special trial coupon.

DON'T BUILD

That new hen house or fix up the old one until you get our large new 100 pp. catalog (over 100 illustrations) telling all about Potter Poultry House Fixtures, Perfection Feed Hoppers, Simplex Trap Nests, feeds and supplies of all kinds. Potter Fixtures have been on the market over 8 years and are used by thousands of poultry keepers. They are complete, convenient and sanitary; made in 3 styles and 12 sizes to fit any hen house.

We now make the complete line of PORTABLE (K. D.) HOUSES, BROOD COOPS, PIGEON LOFTS, etc., formerly made by the Morgan Sanitary House Co., of Lemont, Ill. These are made in 20 different styles and sizes, and if you want a complete, up-to-date and cheap house or coop of any kind you should not fail to send for large illustrated catalog telling all about these goods.

DON'T KILL or sell your laying hens; use the POTTER SYSTEM and pick out the layers from the loafers and keep only healthy laying hens. The Potter System is the greatest discovery of the century in the poultry world and is used by over 25,000 poultry keepers. You can save dollars every year by using our system, because you keep only layers. Our new 100 pp. book entitled "Don't Kill the Laying Hen" is a revelation to poultry raisers on the subject of laying and non-laying hens and egg production. Potter Poultry products are for Particular Poultry People, and if you are particular and want to make more money on your flock you will write today for our catalogs and circulars.

'RINGLET' BARGAIN SALE

For 1909 steps fresh and fair into the foreground, sure of its usual welcome

Champion First Prize Cockerel at New York, 1907-1908
Bred owned & exhibited by E. B. THOMPSON, AMENIA, N. Y.

MY AD ON
CK COVER PAGE

Address E. B. THOMPSON, Lock Box 510, AMENIA, NEW YORK

My *Special Sale List* is now ready for mailing; the selections are from the *finest and largest collection of Barred Plymouth Rocks in the world today*. In this booklet, from *cover to cover*, are listed the *rarest bargains ever offered* thus far in the *history of Barred Plymouth Rocks* and at *prices surprisingly low*. The book *tells the story of the greatest values ever printed*; the birds are now in my matings, and many are

New York winners and sons and daughters of New York winners

This *Special Sale List* covers bargains in single birds, pairs, trios, pens and lots to meet the needs of all, whether wanted for *breeding or exhibition in the strongest competition*. They are *mated by me personally*, which insures the best results.

Customers the world over are making money with

E. B. Thompson's "Ringlets"

the most popular strain of Barred Rocks in the public mind today. The "Ringlets" will sell when no others will by reason of their matchless quality; they're known in every land and play their part in the commerce of the world.

The "Ringlets" are to Barred Rocks what the U. S. Government stamp is on a piece of gold—a Guarantee of worth and value

It will be to your interest to have this *Special Sale List* and take advantage of this *extraordinary opportunity* to buy now at the *cut down bargain prices*. It is *sound business judgment* to buy what you want when offered for *dollars less* than it is worth. It is *justice to yourself, and economy*. In short, whatever may be your wants in *Barred Rocks*, you will find it in my *Special Sale List* at *Bargain figures*. The List will be mailed promptly upon request.

Eggs from the World's best exhibition matings. Elegant 50-page catalogue upon application.

11th Annual Sale

J. C. FISHEL & SON
HOPE, IND.

of our breeders. The sale list is now ready and it should be in your hands at once. It describes the birds we are offering at half their value. Our winnings at such shows as Cleveland, Chicago, St. Louis, Nashville, World's Fair, Cincinnati, Springfield and Indianapolis time after time is evidence we have the

World's Best White Wyandottes

On the testimony of the judges who have placed the awards at the above named shows and of the public who has bought and came back time after time. This is convincing evidence that if you want the best blood in White Wyandottes you should get some of

The World's Best

at one-half their value. We need the room and the birds listed will go. Send for the list—do it now—don't wait, but send at once. They are all bargains—secure them. Enclose a dime and we will mail you our catalog, the finest ever issued; full of valuable information which you need. Let us serve you, not only by sending you a catalog and sale list but by selling you some of our breeders. If it is young stock you want, write us; we have pullets now laying.

THE PHILO SYSTEM

IS ESPECIALLY VALUABLE TO THE FARMER AS WELL AS THE CITY OR VILLAGE FANCIER AND IS ADAPTED TO ALL CLIMATES, ALL THE BREEDS AND PEOPLE

The Philo System is Unlike all other Ways of Keeping Poultry

and in many respects it is just the reverse, accomplishing things in poultry work that have always been considered impossible and getting unheard of results that are hard to believe without seeing. However, the facts remain the same and we can prove to you every word of the above statement.

The New System Covers All Branches of the Work Necessary for Success

From selecting the breeders to marketing the product. It tells how to get eggs that will hatch, how to hatch nearly every egg, and how to raise nearly all the chicks hatched. It gives complete plans in detail how to make everything necessary to run the business and at less than half the cost required to handle the poultry business in any other manner. There is nothing complicated about the work and any man, woman or child that can handle a saw and hammer can do the work.

Two Pound Broilers in Eight Weeks

are raised in a space of less than a square foot to the broiler without any loss and the broilers are of the very best quality, bringing, here, three cents per pound above the highest market price.

Our Six-Month-Old Pullets Are Laying at the Rate of 24 Eggs Each Per Month

in a space of two square feet for each bird. No green cut bone or meat of any description is fed, and the food is inexpensive as compared with food others are using.

Our new book, **THE PHILO SYSTEM OF PROGRESSIVE POULTRY KEEPING**, gives full particulars regarding these wonderful discoveries, with simple, easy-to-understand directions that are right to the point, and fifteen pages of illustrations showing all branches of the work from start to finish. It also tells how to make a brooder for twenty-five cents that will automatically keep all lice off the chickens or kill any that may be on them when in the brooders.

Our New Brooder Saves Two Cents on Each Chicken No lamp is required. No danger of chilling, overheating or burning up the chickens with the brooders using lamps or any kind of fire. They also keep all lice off the chickens automatically, or kill any that may be on them when placed in the brooder. Our book gives full plans and the right to make and use them. One can be easily made in an hour at a cost of from 25 to 50 cents.

A Few Testimonials

Valley Falls, N. Y., Sept. 5, 1907.
It was my privilege to spend a week in Elmira during August, during which time I saw the practical working of the Philo System of Keeping Poultry and was surprised at the result accomplished in a small corner of a city yard. Seeing is believing, they say, and if I had not seen, it would have been hard to believe that such results could have followed so small an outlay of space, time and money.
(Rev.) W. W. COX.

October 22, 1908.
P. S.—A year's observation, and some experience of my own, confirm me in what I wrote Sept. 5, 1907. The System has been

tried so long and by so many, that there can be no doubt as to its worth and adaptability. It is especially valuable to parties having but a small place for chickens; seven feet square is plenty for a flock of seven.
(Rev.) W. W. COX.

Ransomville, N. Y., Dec. 5, 1908.

Dear Sir:—Last spring we purchased your book entitled the "Philo System," and used your heatless brooders last spring and summer. The same has been a great help to us in raising the chick in the health and mortality, the chicks being stronger and healthier than those raised in the brooders with supplied heat. We believe this brooder is the best thing out yet for raising chicks successfully. We put 25,000 chicks through your heatless brooders this last season and expect to use it more completely this coming season. We have had some of the most noted poultrymen from all over the U. S. here, also a large amount of visitors who came daily to our plant, and without any exception they pronounce our stock the finest and healthiest they have seen anywhere this year.

Respectfully yours,

W. R. CURTISS & COMPANY.

Are They Worth Saving? Don't Let the Chicks Die in the Shell

One of our secrets of success is to save all the chickens that are fully developed at hatching time, whether they can crack the shell or not. It is a simple trick, and believed to be the secret of the Ancient Egyptians and Chinese which enabled them to sell the chicks at 10 cents a dozen. It takes but a minute to save a chick and no skill required.

Note What Others Say of This "Trick of the Trade"

Ringwood, Ont., Can., May 6, 1908.

Dear Sir:—Some time ago I got the Philo System and must say it is the best book I ever read on Poultry. I have tried the "Trick of the Trade" and saved twenty-two chickens which otherwise would have died.
Yours truly,

ROY MOYER.

Bethlehem, Pa., April 25, 1908.

Dear Sir:—Your book safely to hand, and have derived great benefit from it, especially "A Trick of the Trade."
Respectfully yours,

G. H. STANFORTH.

Potomac, Ill., May, 1908.

Dear Sir:—I am using your System of Progressive Poultry Keeping and consider it the best work on Poultry Raising I ever read. In my last hatch I saved twenty-three chickens by following the article, "A Trick of the Trade."
Yours truly,

FRED JANISON.

Send \$1.00 and a copy of the latest revised edition of the book will be sent you by return mail. Address

Extraordinary Clubbing Offer

**\$1.50 for
75c**

How to save money on poultry literature for 1909. Three of the best poultry publications, practically supplying the entire needs of a poultryman, furnished for one-half the regular price. ❀ ❀ ❀ ❀ ❀

Our Big "3" Combination

American Poultry Journal } All Three for
Western Poultry Journal } **75c**
Farm-Poultry }

Regular price \$1.50

Farm-Poultry, published at Boston, Mass., is one of the oldest and best poultry magazines published in the East, and is now in its 20th volume. This magazine is always full of valuable information pertaining to thoroughbred poultry, and covers the Eastern field in a most thorough manner.

Western Poultry Journal, published at Cedar Rapids, Iowa, is also in its 20th volume, and is one of the most up-to-date poultry magazines published in the West. The two, together with the old reliable American Poultry Journal, now in its 40th volume, thoroughly covers the entire field of poultry literature, and make a poultry library in themselves.

This is the Greatest Combination Ever Offered by a Poultry Paper

and is especially so when you take into consideration the fact that American Poultry Journal will during the coming season, publish one more of those handsome colored plates of poultry, which alone is worth the price of a year's subscription to any one interested in thoroughbred fowls. This offer is for both new and renewal subscriptions. Cut out the coupon and send in your order today. Address all orders to

Flower Offers

Without Cost to You

Five Beautiful Roses (Order as No. 101)

Many of these roses when in bloom sell for \$4.00 to \$6.00 per dozen at a florist's. You get all these five varieties—Climbing Meteor, bright red, yellow Rambler, bright pink, pure white.

Four Elegant Ferns (Order as No. 104)

This collection consists of the leading varieties—Boston, Emerald, Fountain, Asparagus. These varieties frequently sell for 50 cents each.

Five Fragrant Carnations (Order as No. 109)

The carnation was President McKinley's favorite flower. This collection contains five different colors—one rich scarlet, one deep pink, one light pink, one white, one white striped with scarlet.

Six Magnificent Chrysanthemums (Order as No. 102)

We will send in this collection six of the large, showery Japanese varieties, as follows—one pure white, one deep yellow, one light yellow, one light pink, one deep pink, one beautiful red.

OUR OFFERS

No. 1—Send us only 35 cents and we will send you FARM AND FIRESIDE for the rest of 1909—20 numbers—and any one collection of flowers above, prepaid.

These collections if purchased from a flower dealer at retail would cost you from 50 cents to \$1.00 each. (Be sure to state which month you will want your flowers sent to you.)

Our Guarantee—These plants will be large, healthy and well rooted, and will bloom this season of 1909. They are exactly as described or money refunded.

Farm and Fireside comes twice a month, and stops when your time is up. It is for the farmer and his whole family. There is no other farm paper quite as interesting, helpful or valuable. FARM AND FIRESIDE prints and circulates each month more copies than any other farm paper. That shows how well it is liked!

Send your order promptly to FARM AND FIRESIDE, Dept. D, Springfield, Ohio

METAL MOTHERS

OUR NEW DISCOVERIES MAKE

POULTRY KEEPING EASY AND PROFITS SURE

OUR MACHINES were used exclusively in the original Philo System plant where over \$1500 FROM 60 HENS IN TEN MONTHS. has been cleared from the sale of eggs, baby chicks and fowls raised on a city lot 40 feet square. One of the largest hatching plants in America saved over \$700 this year by using our System of brooding. We sell the best brooder ever made for only \$2.50.

One party hatched and raised \$500 worth of poultry last year with four Metal Mothers, and hundreds of others are delighted with our machines and our new way of raising poultry. Our combined machine hatches and broods perfectly at the same time with only one lamp and one-fifth the oil used in other machines. Once filling the lamp completes the hatch. It runs as steady as a clock in any room from cellar to garrett, and our Long Burning Safety Lamp runs on for weeks without attention. It is the only machine that airs the eggs in the natural way and applies the heat to the chickens like the mother hen.

THE BROODER-HATCHER

OUR 1909 PATTERN METAL MOTHERS are the perfected results of the latest discoveries in artificial incubation. They will hatch hens, ducks, turkey and goose eggs equally well and at the same time. Regulation of moisture and heat entirely automatic. One Metal Mother complete \$7.50; two, \$14; four, \$24. One Hatcher complete \$5; two, \$9; four, \$17; six, \$24. Catalogue free.

The Cycle Hatcher Co., Elmira, N. Y.

Dear Sirs:—As per your letter I will send you an order for six machines in a few weeks. Am hatching with the one I now have. Got 47 chicks from 50 eggs. Have abandoned all my 200-egg machines. Am practicing in my store with a view to starting my 40-acre poultry plant near town here. Think I can sell a lot of these machines next year.

H. W. White, 311 Ada St., Yankton, S. D.

The Cycle Hatcher Co., Elmira, N. Y.

Gentlemen:—The hatcher we bought of you last May is all right. We took off two batches with it; one of 43 chicks and one of 46 chicks. All good ones.

Yours respectfully, G. W. Simpson, Austin, Pa.

The Cycle Hatcher Co., Elmira, N. Y.

Sirs:—You people may be interested to know what an experiment with one of your Metal Mothers has done for us. On the 17th of Oct, we put 40 eggs in your machine, 38 of them being fertile, and when hatching time came we were surprised to find 38 chicks from our 38 eggs. This we think an excellent record, for the machine had been placed out in the open weather, the only protection being an old tin covered box. Yours respectfully, J. P. & L. L. Hollinger, R. I. Red Farm, Witner, Pa.

Cycle Hatcher Co. - 214 Wm. St., Elmira, N. Y.

Canada's Best Buff Leghorns

Won 79 regular prizes at New York, Chicago, the Ontario in the last five years. Illustrated catalogue free. Nate K. Cornwall, Thamesville, Ont., Can.

WHITE ROCKS

DICKINSON'S—best in Ohio. Stock, eggs and chicks. Write me your wants.

S. M. Dickinson : Box C : Granville, Ohio

Hewes' Farm Black Langshans

Best breed, best strain. Winners at Chicago, N. Y., Boston, Buffalo and Scranton this last winter. Eggs \$2.50, \$5 and \$10 per 15. R. A. Hewes, Crete, Ill.

Who's Who in Hendom

4. THE MUCKRAKER IN IOWA.

I have it from Mr. Dooley that Ioway is a great state. He arrived at this conclusion immediately after he heard the returns from the last American Poultry Association election, when Dick Richards was elected to something by about the majority it was safe to tote about.

Ioway has given us more of the great men of hendom than was her apportionment but in so doing it has not crowded many others off the map. In fact she has set so good an example that she has added to the lustre of the many stars in the heavens of hendom. She is as well known to all the hunters of better birds as Dolliver is among the silver-tongued. Ask Jim Scott of Onawa! He knows! Years ago, when such men as Uncle Ike Felch, who, by the way, may be traced across the map of poultry progress in about as many states as the next one, years ago, I say, they got into the habit out there of getting the real wiseheimers of the fancy into their shows to show them how such and such things were done with reference to things chicken. They caught on just as quick as a country boy does when he goes to town and grabs the airs of the city swells, making them look like the classic three dimes, especially after he has done a turn or two at it and knows the ropes. They had Uncle Dan Lambert and a host of others who have passed this way and other ways, all since or previously being termed Uncles, right out there where they could get their ideas. Something was bound to happen. Bing!

As the state grew in its poultry wisdom, it produced its Russells, Stouts, Elliots, Warners, Pages, hosts of Smiths, Peases, Joneses, Browns, Greens, Grays and Whites. I have never seen nor heard of any Blues being in that commonwealth. But wait one moment, please, I almost forgot the Andersons, Reynoldses, Shellabargers, Marshes, Prewitts, Mighellses (pronounced Mileses), and Dwigths and Bradens, McGrews, O'Neels, Eddys and dozens of others.

In Kansas they say that to produce a Russell is enough for any state to get into the ranks, which statement made the grass wave a few fluttering flits and the leaves rustle and the wind sigh as it toyed with the Iowa corn fields and flirted with the feathers of the purple blooded fowls roaming over her beautiful acres. (Isn't that worth the price of admission itself?)

Billy Russell was born in the good old fashioned way out there on one of those Ioway farms, so they tell me. He helped his mother with the hens and chores about the poultry house, the roof of which I have heard was the blue dome of the all-covering heaven. Early in life he evinced a great regard for yellow legged chicken and whenever he saw the circuit preacher coming he would run for home and sit tight till the drumstick, a piece of the breast, the off thigh, four table-spoons of dressing and six of snowy mashed potatoes, with rich gravy swimming in his plate, I mean milk pan, came his way.

In spite of this very select fare little William did not attain great stature but he did grow a big capacity which turns the landlords pale wherever he is known. When the march of the Rock reached this western land and headed on for the A-Y-P show, William's folks bought a few of these fowls and were known as toney people, because of the fine chickens they kept. The work of breeding them better grew to be fascinating to Willie. He could not keep away from the mating yards and when his mother could not make connections with the coun-

ty fairs that wanted her to judge the poultry, he was sent in her place, which idea has since been practiced by a young man from the land of the effete, but did not work, so they say at the St. Louis World's Fair. Billy went so far as to pry the bars off the village bastille and see if he could not make the bars on the fowls look more like the nineteen ten Standard called for them. Court records did not tell me what reward he received for this bright idea but it is recorded in the family bible that dear William was tenderly caressed across his mother's knee.

But to make this read right and sound well and make William feel satisfied with my thumb-nail biography, I must say that he grew as much as he could and after a few trips away from the family roof, learned what to do with his hands and feet. He has made more trips away to judge now, and he is not much past thirty, than any man in the west and I guess for that matter a good many in the east cannot approach his record. Ioway is proud of him and wherever he works they take to him. His love for the bars has led him to be one of the Standard makers and it may be said that he has never been behind them in his life.

Ioway is great on barring and bars—she has three pens—and more Rock breeders than you can count on fingers and toes, all of whom are head and shoulders above the average. Among them is Uncle George Stout, of whom let it be reiterated all declare him to be the grand old fancier of the state. He saw all the ups and downs of the fancy in Iowa if any one did. He has been a leader in the state association work until he became too much taken up with care for himself, as the shadows of his life began to grow dimmer. As an exhibitor he has always been a supporter of the shows and many a time has he gone down into his purse to help along a struggling cause in the early days of the fancy.

Over yonder in the little village of Waverly sits the one quiet man of the state. He is another of the Rock men who infest the industry in Iowa for the industry's own good. He makes all the shows of importance and gets outside the state often with a sample of what he is breeding but lives by his works rather than by the horn he might blow to attract the hunter. One often hears that he is quiet in his methods of getting into the fancy game and he is. It has been said that he would rather pass the Essay on Silence than the plum duff. He goes right along watching what the other fellows do and saws wood, though he puts a muffler on the saw. One would be led to think that when a boy he was literally raised in an atmosphere of S-s-s-h, there's a baby in the house.

The clan of Mighellses is headed by the Doctor himself. This line of Iowa fanciers are fans who follow the hobby for the pleasure and the fun they get out of it and incidentally make the birds pay their way by breeding such good ones that others have to come in to buy. Exactly when the Doctor took up Light Brahmas I cannot recall but as soon as the Partridge Wyandottes were admitted he was one of the few who went right to the front, later taking up the Columbians and now being right close to the top in this line. I think that the Doctor had a hunch of some kind that these varieties were about to be admitted, for when they were he was into them strong and had a good line of birds founded.

But those Smiths! They are a wary bunch of henists.

Not naming names we may go ahead and tell something on them. There are so many of the genus Smith that one must be careful not to make it too plain as to the particular Smith.

One of the important Smiths of the Ioway fancy took a notion into his head, as they say, and decided that certain of the white chicken prizes would be well to annex at the last Kansas City show, so he did. Yes, he worked the whole summer on the line of eye openers he was going to drop into the class with and then when he alit in their midst something went off that sounded like a Fourth of Julumber celebration at Pagosa Springs, Colo., July 3, 4 and 5. Anyhow he captured a certain prize that had never left Missoo before and Cedar Rapids was the gainer. The bird was well scarred up in the fight, but that didn't matter as long as the prize money and the honor and the glory, as Victor says in his ads, had been Wells-Fargoed home.

Catching a northbound train after a sufficient time at home to allay suspicion, the Smith betook himself to the yards of a certain breeder who had invested in some of his (Smith's) eggs for hatching the previous season and found that said investor had betaken himself to the state show held somewhere in the vicinity of Hamline, Minn. The Smith constituted himself as a Nicholous Cartier and sleuthed a sleuth to said point where the quarry was in hiding and there arrested his man with a handcuff of silver dollars huge enough to blush to a red, red tint, any Oklahoma alfalfa stack, and all these bucks just to get a kicklerel to show the boys that his strain did not strain itself when it produced the K. C. winner and that he had

concerted his detractors. And now he goes Shellabargering around the same as he always did, the winning at Chicago not seeming to swell his head or bother his running gear. You have it now, so rest easy.

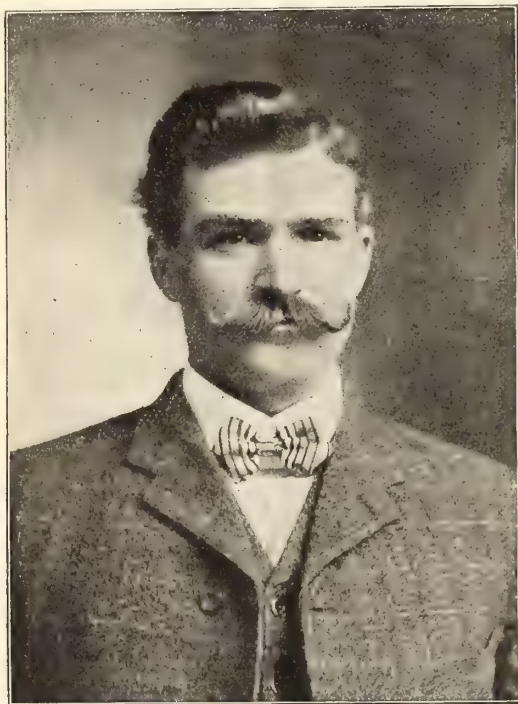

We have now reached the Elliotts. Let us stop a moment. A few summers ago I visited them and found among other things on the farm, two Elliotts, some excellent Buff Stones and a very interesting woodpile, to say nothing of a well filled larder. The Elliotts themselves are two of the most interesting fanciers I ever met. Never have I met a woman who is better posted in the variety history and the doings of the breeders of it than Mrs. Elliott. Jim could not keep chickens without her. For many years the male Elliott aspired to become a judge and who wouldn't when his wife was constantly making him keep abreast of the Standard and its intricacies? If a man aspires with his whole heart long enough he will make the rise. This is a law. Jim kept talking chicken and handling chicken until he was familiar with all the birds found in a seven months' trip and one day when he was not noticing anything in particular, certain flocks were looking up his record. They found that he was chicken through and through and said what he meant and meant what he said and that St. Peter had nothing charged up to him worse than being party boss for a few terms and postmaster who delivered the goods, so they hired him to judge their show. The next year they came for him again and then other shows found out what he was worth as an expert alienist in the show-room and they sought him, too. Well, I do not dare predict where he will stop. These chicken folks are such funny folks! But here is a couple who have not sought a great notoriety, preferring to let the other fellow find out what they were breeding, enjoying life as sane folks should and paving the way to a long and satisfactory existence in the fancy.

It is but natural to jump from one live species to another, so let us consider the Wales, whom we almost forgot, before they escape memory. There is but one of them. They are very rare. And it is a pity we cannot discover the secret of manufacture, for to add a dozen more of them to the fancy of the state of Iowa would be to lift it head and shoulders above—well, let us not be too particular. In most every state there are a few breeders. They seldom show birds themselves, preferring to let some other man bag the glory while they get remuneration enough from the fact that the winners have occasionally been produced in their yards. It is a pleasant feeling, this being able to sit back in your evening chair, musing over the winnings you have made for the more unskilled brother while a Hernando Cortez slowly carries you off into Abajo district of Cuba, and you dream of still greater honors as the soft curls of the weed waft away into nothingness. A few men like this in a state's fancy circles add dignity and ballast to it. They put a finishing touch to the ranks of hen lovers that cannot be bettered. They draw from other territory than that immediately adjacent to that particular state.

To be in a class by yourself does not necessarily mean isolation from the rest of henkind, but rather draws to you, if you be of the right sort of magnetic material, all those who would attain greater things in the breeding line. And so the Wales sits upon his throne of years' building, not seeking new worlds to conquer, nor to further make vassals of those of us who have paid taxes in his realm. With the most graceful abandon does he adjust his crown of olive and draw inspiration from the checks and money orders that issue from the region of St. Joe, not the St. Joe in Michigan. Settings of eggs at twenty and twenty-five are calculated to create inspiration, and with the proletariat hovering over your back stoop with hundred dollar bills burning their fingers only goes to create further inspiration, which if it would happen to the rank and file of us would stop the action of that organ of our body calculated to keep up the circulation.

But I cannot keep this up. The birds need attention and the boys in Ioway are looking forward to a rest the balance of the summer. They are quietly planning another assault on their state legislature which threw them so hard when they went after a state appropriation the past winter. It seems that to get money out of the lawmakers for this, the greatest of their state products, is like making silk purses out of sows' ears. But they will work for it still and one of these days when the clouds hang heaviest they will get what they are after. Missoo had that experience, and all the other states which now boast big state shows subsidized by the state strong box.

A year ago at the Iowa state fair the breeders of the state association organized themselves into committees of one and all worked for the appropriation, but the fact that some worked harder than others goes to show that if the others had worked as hard as some they would now have the money. They are getting down to business again and they may get it later. They say they will get the money and that is all there is to it.

S. L. CORK.

Barred Plymouth Rock Specialist, Peru, Ill.

"others at home just like this one." Quotations are mine. 'Tis a shame, fair Esmerelda, to loose such a flood-gate of information about a fellow as this, but you will never be able to get next, not even near, so I am safe in the disclosure.

Descending to earth again for gas and water, we next come to more Smiths but I am afeared to tackle them so we will pass on to the life of one Fred Shellabarger, who is known far and wide as being a man who stands up so straight that he is often liable to fall over backwards, is called Shelly by everyone within a thousand miles and puts Blue Jackets on all his birds in the winter—in his advertising. Somehow the idea got agoing a year or so ago that Shelly was losing ground. This was all wrong. He has been gaining from season to season. The boys often get their wires crossed or grounded and still imagine that they have a perfect circuit with the main line connection and can hear all that is going on. Shelly cut in and found out which way some of the fellows wanted the wind to blow so he gets ready for the Chicago show just held and takes it in, trotting out a string of birds that looked clever to the fellows who were to fight them. Fred had been breeding them so long that he knew what it took to get in, and he has been judging so long that he forgot when he commenced. And this string proved that Shelly was still the hand at getting them that he ever has been. He just stayed in the alleys where his birds were exhibited and did business, which somehow dis-

PRIZE ARTICLE DEPARTMENT

We would like to have all of our readers compete for the prizes offered each month in this department. Send as many articles each month as you desire. For the best article we will pay \$3.00 and for the second best \$2.00. Make your communications about a column in length, which is about 600 words. They should be timely and appropriate to the season. Articles describing appliances and houses and accompanied by rough drawings are especially desirable. All the communications must be accompanied by a letter stating that they have been sent in for competition in the Prize Article Department. All articles must be written on one side of the paper only. Articles received after the 15th of the month will be too late for competition in the month following, but will be entered the next month. No manuscript will be returned, but all who send meritorious articles will be given a year's subscription to AMERICAN POULTRY JOURNAL, whether the article is published or not.

The first prize in the contest this month has been awarded to Charles H. Wagener, Fullersburg, Ill., and the second prize to Frederick W. Babcock, New Haven, Conn.

LICE AND MITES.

The chicken mite is one of the worst enemies of poultry. One-eighth of all the chickens hatched are killed by lice; therefore it is very important to know how to destroy them. Chickens that are infested by lice are very unprofitable. The expenses are more and the returns are less. Lice are very destructive and when once they get a good hold, they breed so rapidly that your whole flock will soon be infested by them. Then it will be a hard task to get rid of them.

The easiest way is to destroy them as soon as they are noticed. One can easily tell when fowls are infested by lice, because they look ill, have pale combs, rough plumage, and are lazy. Roup and many other diseases are brought on by lice, which so weaken the fowl's vitality that they cannot resist the most common diseases. Hatching hens often die on the nest or else leave their eggs when they are bothered by these blood-sucking pests. If the hen survives the little chicks will immediately be infested and killed by the lice.

There are many different kinds of lice, but the red mites are considered to be the worst. They hide in the crevices during the day time and come out at night and bother the fowls. Care should be taken when new birds are put in the flocks, because if they have lice the whole flock will soon have them.

As soon as lice are found in the poultry house it should first be thoroughly cleaned and then be fumigated or thoroughly sprayed. After you have cleaned the poultry house get a dish of sulphur and light it and put it in the poultry house. Then shut up all the windows and doors. Be sure that there are no chickens in the poultry house, because they will surely be smothered. Next, watch the cracks, because the lice will come out by the score. Dip an old brush or broom in hot tar and rub it over the cracks. This will kill all the lice outside and will prevent the rest from coming out. Keep the doors closed as long as possible, because the longer the fumes stay in all the more lice there will be killed.

Another good way is to thoroughly spray the poultry house with kerosene emulsion, or some other good liquid lice killer. If kerosene emulsion is used it will kill all the lice and also all the eggs. When all the lice are destroyed in the poultry house they must then be destroyed on the hens, because else the poultry house will soon be infested again. Catch each hen and take a handful of lice powder and rub it thoroughly through her feathers. Do this twice a week so as to destroy any new lice. A good plan to prevent the lice from breeding again is to whitewash the inside of the poultry house. The roosts and dropping boards should be painted with a liquid lice killer every two weeks, so as to kill any stray lice.

Clucks should be dusted through thoroughly with lice powder before they are set. This will stop the lice from bothering the cluck and will also prevent them from attacking the chicks as soon as they are hatched. The little chicks should have their heads greased up with heated lard every two weeks so as to kill all the head lice. After the chicks get bigger lice powder can be used on them.

Show birds should be watched closely because when they are confined in warm halls, with no accommodations for dusting themselves, they often become lousy in a few days and will lose in condition before the owner knows it. Most people will say that it is no task at all to get rid of lice, but by the many lousy chickens that anyone sees one would get to believe that it is one of the hardest tasks in the world. Lice and poultry cannot live together, so the best thing is to destroy the lice and let the poultry live. When the lice are destroyed the chickens will look better, feel better, their

combs will redden, they will brighten up, lay more and make more money for you.

POULTRY AS A LIVELIHOOD.

The experienced breeder of poultry is repeatedly asked the question by the beginner, "Is there a living in the breeding of poultry for market and eggs exclusively?" and the question being one which cannot be answered satisfactorily by a brief yes or no, as so many vital points are involved in it, particularly when a false move may prove the financial undoing of the inquirer. The Episcopal marriage service contains one caution which has often occurred to the writer when the question of poultry raising as a living has been put to me, and it is worth quoting here: "It is not by any to be entered into inadvisedly or lightly; but reverently, discreetly, advisedly and soberly." Whether a living can be made from poultry and eggs depends primarily on the man himself. Unless he is a nature lover and fond of dumb animals in all their varieties, the venture will prove a disastrous failure from the start. The old adage, "Orators are born, not made," applies with equal force to the poultry breeder, either on a large or small scale. The business is no "cinch," but work, and very hard work at all seasons of the year. No sacrifice is too great to be considered a hardship for a painstaking breeder, who loves his stock, aside from their producing value, and whose advent in the poultry yard is always the cause of rejoicing among its feathered denizens, so soon do they learn to recognize and trust their friends.

Before embarking in an enterprise of this nature the would-be breeder should post himself thoroughly on every

A mated trio of Bradley Barred Plymouth Rocks. Male has exceptionally fine hackle plumage, but blurred in photograph. Bred and owned by Bradley Bros., Lee, Mass.

detail of the business by a careful perusal of the best poultry publications, or better still, should supplement such reading by a short apprenticeship with some reliable breeder. Too many go into poultry raising as a business, investing good and hard earned money, when they are not competent to set a hen properly, hence the plenitude of abandoned poultry plants on every hand. Some capital is, of course, required, but it need not be a large amount at first, for as the industry grows the means for enlargement will gradually furnish themselves from the ever-increasing income.

I am acquainted with a very successful market breeder of White Wyandottes and Pekin ducks who is building up a good poultry and egg trade from year to year who four years ago erected good, substantial buildings and yards with a ten dollar load of old packing cases, and ten dollars more invested in tar paper, windows and wire netting, sticking to his regular business at first, until now his plant supports him.

In choosing a location for what is intended to be a supporting plant always get as near a large city as possible, or a shore or summer resort, combining both if convenient, and cater for a family boarding house or hotel trade exclusively. Secure or lease land enough to raise the greater part of the feed used on the plant, and always sell stock full dressed, making it appear as attractive as possible, and wash and grade all eggs sold. This course will not only gain trade at an advance over market prices but will hold and extend it every year. Be satisfied with plain and comfortable coops and runs, rather than run in debt, and if engaged in other business stick to it until at least one season's crop is marketed and everything is running smooth. If hatching is

done by incubator choose medium size machines, as accidents may occur, and the loss is not so great. By a consistent following of the above few rules I for one believe that there is a living, and a good one, in market poultry raising, and it certainly is a business that hard times cannot injure or the trusts "corner."

Small fruit raising is also a very profitable addition, and the two vocations work in together to perfection, the fruit materially assisting the breeder's income in the dull season for broilers and eggs.

New Haven, Conn.

NIGHT RAIDERS

In every hen house you will find these creatures. You will not have the least trouble in getting a good crop of them. They are quite ancient, and it looks as if Noah must have had pity on Mr. and Mrs. Louse and let their children come along with them, as there has been so many of them ever since. They don't seem to die. They just get old and live on. Never even get sick. No chicken powder for them. The roup never bothers them. You don't have

F. A. TECKTONIUS.

Proprietor Model Poultry Farm, Racine, Wis., where he produces his prize-winning Buff Leghorns.

to take special care of them to keep them in good health. The filth will never give them scaly legs. Bumble-foot never attacks them, for they are always running, as you have noticed, when they have got astray and have found their way on you. Black-head has no effect on them. Bad water will never give them the cholera. They never get over-fat and cause them to get egg-bound.

Every egg is laid, and every egg hatches a half dozen lice, I guess. You don't need to feed them oyster shells, either. And grit is of no use to them. Gapes never bother them. The dreaded diarrhoea will pass them by. I never heard of them having a disease. Their young are always healthy. No tonic is needed, no worm medicine. Their teeth come through early and without pain. They torment the chickens as soon as they are hatched. So while you are losing money they are growing fat.

Now, as lice never seem to die or get sick, don't give up and let them have their own way. They cause more deaths in the chicken yard than all other diseases put together. No success can be had with poultry if they are troubled with lice. Chickens and lice cannot get along together very long. A lousy hen is a poor layer, but she eats lots of feed, and

the lice get the benefit of it. The only way to get the best of Mr. Louse is to keep things clean. Have everything in the hen house made so they can be taken out about once a month and thoroughly cleaned. The lice will soon skiddoo if you get after them many times.

Keep the interior of the house whitewashed so it will be clean and bright. Mr. Louse don't like anything like that. Darkness and filth are his hobby. Now don't wait till these pests have full sway in your chicken house, and kill a lot of your little chickens before you start your raid on them.

Now don't forget that there are other creatures that like chickens as well as lice. How about Mr. Rat? Yes, he likes them too. He don't bother the old fowls much; he would rather have something he can handle better. So look out when you put out the little chickens, for they are just what he is looking for. Don't have any old boards, or old trash heaps anywhere around if you want to raise any chickens. For rats like just such places. Keep things clean outside of the chicken house as well as inside. Set traps around in your feed bin and catch them before they eat a lot of your feed. Get a good cat and see how quickly the rats settle down. If you start to raise chickens don't raise more lice and rats than you do chickens, for if you do you will never make a success of the chicken business. It will only take a little extra care to keep the lice out of your chicken house, and if you have a good cat around the rats won't show themselves much. A good bulldog will make the two-legged raiders a little shy.

Joseph H. Van Meter.

Sewell, N. J.

THE TIME TO SELL HENS

It is the common practice with many poultry raisers to sell the old hens in August, while others wait until late in the fall when spring chickens begin to crowd the roosting quarters. The person who follows either of these plans does not get the greatest possible profit from his flock.

We speak from the standpoint of a resident of southern Michigan, and from experience with heavy breeds of hens, such as Rocks and Wyandottes. A plan which is adapted to this section may not fit every other locality, and yet similar conditions exist in widely separated territories, and general principles are applicable to the poultry industry everywhere.

The highest market price for hens is usually in May or June. Two years ago we sold for 12 cents per pound alive; last year at 10 cents, and this year at 14 cents in May. By the first of August such hens will bring only 8 or 9 cents per pound alive and will probably have lost one pound each in weight. Their market value will have been reduced to about half what it was June 1. Instead of bringing 70 cents to \$1 each they will bring from 35 to 50 cents.

By the first of June the hatching season is nearly over, and there is no need to keep the hens longer to save setting eggs. The two-year-old hens which have laid during the winter are nearing the close of their laying period. Even if they should lay the average number of eggs during June and July the value of the eggs would hardly equal the loss in the market value of the hens, as before mentioned. By waiting until August to sell there is a loss of the feed and care for two months or more, and there may be a further loss from hens dying in hot weather. The time and trouble of breaking up broody hens is something to consider also.

Supposing the hens are kept until November, where is there any gain? They may bring 10 cents per pound, but they have passed through the moulting period and have required considerable feed to get into market condition again. If your flock gives you seven eggs per hen per month from August to December they have done well, but they have not yielded much profit.

The yearling hens which are intended for breeders for the following year must be kept at any cost, some which are rearing chicks must be kept until that duty is performed, and some extra good layers may be worth keeping another year for market eggs alone, and it is much cheaper to keep a hen through the moulting period than to raise a pullet to the laying age.

Hens which are not to be kept until the following year should be sold before an abundance of broilers in the market brings down the price of hens, which is liable to occur any time after July 1.

Watch your flock, and when hens have reached their limit as profit payers let them go before they cause you loss.

ANCONAS

What is Their History?—From Where Have They Sprung?—A Distinct Breed of the Mediterranean Class—This Variety of Fowl is Rapidly Coming into Popular Favor, Both as an Egg Producer and Show Bird

Written for American Poultry Journal by W. P. McNary, Bannock, Ohio

We have often wondered why it is that we see so few articles regarding the Mottled Ancona fowl in the journals devoted to poultry. We know that it is not on account of there being no breeders of them in the country, although we are free to admit that they are not as extensively bred as many other varieties, but we do know both from observation and experience that among the ones who are familiar with them they have many enthusiastic, earnest and sincere admirers, thus again comes the question of why, when we consider the intensity of the "mottled fever" of the breeders of Anconas, that we find so little publicity given them in the way of printer's ink. We are inclined to think that this fact is due, not to the editors of our poultry journals, but to the inactivity and to the—what shall we call it? We believe the proper word in this instance would be—carelessness! Yes; to inactivity occasioned by carelessness of the Ancona breeders in placing the facts before the public is the sole reason of the lack of knowledge, by so many, of the Ancona fowl. Wake up, Ancona breeders! Let us one and all take a personal interest in this matter, and let each of us do something toward bringing not only to our brother fanciers but to the poultry raisers in general and to those who breed for egg production in particular, a realization of the fact that the Anconas are a fowl well worth an investigation of their merits.

We have heard the remark or question asked: "that if Anconas are all that they are claimed to be, then what is their history—from what have they sprung?" We feel that there are many far more capable of handling this subject of their origin than we are, so we will deal but briefly with it.

They are considered a distinct breed of the Mediterranean class, originating in the northern part of Italy, in and around Ancona, hence their name. To exactly what breeds and varieties they owe their origin is to a great extent a matter of conjecture, but the best authorities that we have been able to find claim that they are a cross between a fowl called the Black Valdano and the common barnyard fowl of northern Italy, then again we find another writer claiming that they are a mixture of Black Valdano, Black Leghorn and the common barnyard fowl, which latter statement seems to impress us as being the nearest correct. We take the liberty of quoting from "Bennett's Book of Anconas" as follows:

"In the light of these simple facts, it seems clear that in the neighborhood of Ancona, Italy, there has been, years since, a general mixture of Black Leghorns with light or white colors of the same family, resulting in both blue barred and mottled plumage. Should this be so, the extreme wildness of the Black Leghorn should account for the same characteristic in the Ancona, and the Black Leghorn must be regarded as practically the ancestor of the variety."

We know that there will be some who will not agree with these views, for we find breeders claiming that there is no Leghorn blood in the Anconas, but, after a study of the characteristics of the breed and due consideration given to size and shape, we are very much inclined to think that there is some Leghorn blood in them, although we do not set ourselves up as an authority upon the subject, preferring to simply give same as our opinion, based upon the investigations of those in a position to be considered authorities of worth. But what does it matter to the average breeder of today, what the origin of them may have been? It is present-day results and returns we are all looking for.

We find importations of Anconas into England as early as 1852, and after which date they were taken up very rapidly in that country which can best be explained by the following:

"To such mixed ancestry may probably be attributed the extreme hardiness and prolificacy which distinguished the Ancona when first really taken up in England. As a layer it is almost without a rival, quite a number of breeders reporting 200 eggs per annum; and its remarkable hardiness in regard to everything except foul air or tainted ground was also observed." (Wright's Book of Poultry.)

At what date or by whom they were first imported to America we have been unable to learn definitely, but that fact is immaterial, for they are here, and especially do we find them in Ohio in large numbers. In appearance they

are of the Leghorn type, but in size a trifle larger, dark in color—greenish black mottled with white, the dark feathers being tipped with white, wattles and comb red, while their shanks are spotted or mottled usually with dark-colored spots on the yellow background of the shank, body well rounded and well formed, their meat, while not of the abundance of the larger breeds, due to their size, but of as yellow, sweet and juicy a nature as their larger friends. The original Anconas were all single combs, but of late years we find scattering flocks of the rose combs, but we believe that it is merely a matter of taste to the breeder which comb is to be chosen. It is a very unusual thing for one of them to want to set, in all our experience we have never had more than two or three.

The handsome appearance of the Ancona is sufficient to attract the attention of anyone, one peculiarity—or rather trait that has been very noticeable to us, is, that of the appearance of cleanliness they always present regardless of what kind of ground they may be ranging over, whether covered with grass or entirely bare, for they always have the appearance of having just been washed, and to this excellent point to the eye, coupled with their beautiful plumage, easily explains why they are so attractive—also add to these the upright, proud carriage of the bird and you have the reason in full. True, it is not by any means attractiveness alone that we desire in a fowl, but usefulness as well, but when we consider attractiveness combined with egg production, which we have unsurpassed almost in the Ancona, what

ANCONA HEN.

more do you want? They have been termed by many, "egg machines," and are justly entitled to the name, their specialty being winter laying, the cold weather and frosted combs having but little effect upon their laying qualities, which is decidedly in their favor over many other breeds. Under no better conditions with no better care, we have gotten eggs in abundance from our Anconas in the cold winter months, when others with other fowls were getting almost none—this fact has been actual experience with us and not hearsay. Like others of the Mediterranean class, they mature early, and commence to lay as pullets at an early age, as yearling hens they do equally as well, and when they have reached the age of two or three years they apparently endeavor to run a race with their younger sisters in number of eggs laid, which cannot be said of many breeds, but which makes them both valuable and desirable as egg producers, for you do not have to dispose of the old hens each year in order to secure your winter eggs. But do not understand us to insinuate that they are only winter layers; we lay stress upon the fact of their winter laying simply because winter eggs are the ones that command the high prices, but instead we have in the Anconas a grand summer layer as well as a winter one.

We have no hesitancy in saying that if the laying qualities of the Ancona were well known, the owners of many of the large poultry plants maintained for egg production throughout this country would discard their present breeds and use Anconas exclusively; why shouldn't they? In them they would have egg producers of the best, healthy, strong, active stock, intelligent and pleasing to the eye, which, with their

productiveness considered, would make a combination worthy of the attention of these breeders who make a specialty of eggs. No flock of fowls are more pleasure to take care of, often—daily, when entering the pens of our Anconas, and before the gate or door can be closed, there will be several of them endeavoring to get on the feed bucket or on your shoulders, and all the time singing, isn't some of these little things the ones that make the caretaking a pleasure? We freely admit that they have a wildness in nature toward strangers, but this wildness is greatly exaggerated by those who are not familiar with them. We have kept our birds both yarded and upon free range, and can candidly say that we have seen no noticeable difference in the egg production. We have heard the remark that "you can't yard them," which is amusing to us, for if those who think that they cannot be yarded successfully would only call at the Minnehaha Poultry Farms we would quickly prove to them that they can be confined in yards, and that without any clipping of wings or patent appliances.

There has been organized for some time an American Ancona Club, with the same objects in view as other specialty clubs, that of promoting the breed and giving them publicity, but for some reason of which we are not in a position to say, they have not brought plainly before the people the merits of the breed; it may have been for lack of funds, possibly for lack of interest by the members, or probably for reasons insurmountable by the club's officers, we do not pretend to know, but we imagine that a lack of

ANCONA PULLET.

funds in the club has caused a lack of interest; we have in this world many breeders who want the benefits for their fowls that is derived from the publicity given by the specialty clubs, but who want the "other fellow" to foot all the expense and do all the work. Specialty clubs, by which more publicity is given a breed than by almost any other method, and which awakens interest in the special fowl which they represent, cannot be kept up on "wind," regardless of the fact that the club may have for its officers men who rank high among the poultry fraternity. The Ancona Club today has among its officers men of enterprise who with the aid of the breeders will do much toward placing before the public a knowledge of and creating an interest in the Anconas that has never been heretofore. The cost to each of us breeders of Anconas—the work to each of us, would indeed be small to help the club and bring prominence to our fowls, and would prove beneficial to both the public and ourselves. We are glad to say that among us are many men capable and with ability, who, from their experiences with the breed, could bring a knowledge to those unfamiliar with Anconas, through the columns of our many poultry journals of facts that would be weighed and considered, and each breeder could do much by assisting with at least his membership in the American Ancona Club, that would aid its officers in the work before them, and in the end the benefits would come back to the hustling, energetic breeders of Anconas, who know and feel that in this fowl they have one that should occupy a position in the front ranks, so, to all breeders of Anconas, to all club members, to all who have an interest in the "Mottled Pets," we say waken up!

HOUSING AND FEEDING POULTRY

"Artificial conditions must be produced to make hens lay in the winter time, as it is the nature of fowls to produce eggs only from April to October. Twelve to fifteen dozens of eggs a hen a year is possible and practicable. Some do even better and others get less. It is the business of the poultry-keeper to provide not only 'weather' conditions, but also the raw materials for the manufacture of eggs."

Professor Cyrus L. Smith, formerly an institute lecturer in various states in the middle west, now expert for the Spokane & Inland Empire Electric Railway Company, made the foregoing observation in the course of an address on "The Housing and Feeding of Poultry," before the real estate class of the Spokane Young Men's Christian Association. He said:

"Never let the hens out of the house from October 15 to April 15. If the hens have been properly bred, intelligently culled, are fed and housed as directed, the feeding being done at the same time every day, including Sundays, each hen should lay an average of eight dozens of eggs during the winter period. During the last five years strictly fresh eggs have averaged 40 cents a dozen for these six months in Spokane, the price for the summer months being slightly less.

"Those eggs produced between October and April ordinarily sell for a much higher price than do eggs produced from April to October. In a state of nature fowls of all kinds usually lay eggs between April 1 and June 1, therefore the production of eggs from October to April is an artificial production due to artificial conditions, as the hen naturally lays eggs in the spring. If we are to influence her to lay eggs from October to April it is but reasonable that she should be provided with spring conditions. As these conditions are not to be found out of doors, we put her in a house under artificial conditions as near like spring as practicable. This artificial hen kept under artificial conditions is an egg machine, manufacturing from new material a highly concentrated, popular and desirable food product.

"This requires certain materials, without which the best of hens on earth would not be able to produce eggs. No kind of grain contains in proper proportions the elements necessary to make an egg, therefore mixed grains are found much better than any single grain. The egg is the richest in protein of any food that comes to our table. It follows, therefore, that the raw material for egg production should be rich in protein. Alfalfa furnishes the cheapest form of protein available in the Inland Empire. Wheat is the cheapest grain available. It is economical to make the daily ration as largely from wheat and alfalfa as practicable and at the same time give variety in the ration to furnish the necessary elements to manufacture eggs without waste of raw material, to maintain good appetite, good digestion and provide for necessary exercise.

"The best method for securing exercise is to feed a portion of the grain ration in the litter on the scratching floor. This grain mixture for 100 hens from October 15 to April 15, considering present prices in this district, should be 1,600 pounds of wheat, 400 pounds of corn, 200 pounds of oats. Mix these and feed six pounds in the evening. In addition to this make a mixture of 600 pounds of bran and shorts, 200 pounds of cornmeal, 20 pounds of oilmeal and feed six pounds a day in the dry feed hopper. Also feed six pounds of alfalfa hay chopped fine and six pounds of carrots, cabbage or mangels. Make a mixture of 100 pounds of oyster shell, 200 pounds of granulated bone, 200 pounds of meat meal. Feed two and a half pounds a day in one section of the dry feed hopper. As the hens would need more lime than they would get from the oyster shell, slake one bushel of lime, mix to a stiff mortar in a box where the hens will have access to it at all times, also keep them supplied with a liberal amount of sharp gravel."

Regarding the selection of a site for poultry, however, Professor Smith said it is desirable that the land be well drained and preferably sloping enough so no water will stand in the yards during rainy weather. A southern slope should be selected when practicable. He added:

"The house should be dry, warm, well lighted, well ventilated and so arranged as to be easily kept clean. The walls should be tight and absolutely windproof, leaving no cracks around the foundation, the eaves or gables. The curtain front houses give the best results, as they provide good ventilation without drafts.

"Considering cost of construction, convenience of arrangement, ventilation and light, the following plan is one that I have found to give general satisfaction:

"The house is 32x16 feet in floor dimension, divided into two rooms with tight partition between. It will provide room for 100 hens—fifty in each room. The front is 6 feet

6 inches high, the back 4 feet 6 inches and the gable 8 feet 4 inches in height, 6 feet from the front and 10 feet from the rear. The roost platform in each section is 16 feet long, 3 feet wide and 18 inches from the floor.

"There is a nest rack 12 feet long and 15 inches wide and 8 inches deep under the platform. A 10-inch board, hinged to the front of the nest, drops down to gather the eggs. The nests are dark. There is no bottom to the nest rack, and the rack is not fastened to anything, so it can be easily moved for cleaning. Each section has two roosts 16 feet long, 15 inches apart, made of 1x3 lumber set edgewise, with a strip 1x2, rounded, nailed on top. These are set 6 inches above the platform and are loose, so that they can be taken out for cleaning. The flooring is built of matched lumber.

"The joists are 2x6, 2 feet apart; studding and rafters are 2x4, 2 feet apart. The structure is sheathed with shiplap, covered with paper and sided with thin siding. The roof is sheathed close and covered with two-ply asphalt roofing. The upper three feet of the front of the house is left open and covered with poultry netting. There are four frames 3 feet by 7 feet 6 inches, made of 1x2, hinged to plate and covered with cloth, to be hooked up to the roof in fair weather, but closed at night and during stormy weather. There is a door 6x2 feet in one end and also in partition. A dust bath box 8 inches deep, 4 feet long and 18 inches wide is in each room. Dry feeding box and drinking fountain are in the partition.

"The materials required for this house are the following: Twenty-seven pieces 2x6, 16 feet long; 4 pieces 2x4, 12 feet long; 4 pieces, 1x3, 16 feet, surfaced both sides; 28 pieces 2x4, 18 feet long; 10 pieces 1x2, 16 feet, surfaced both sides; 800 feet short flooring, 400 feet of shiplap, 600 feet surfaced boards, 500 feet thin siding, 100 feet 1x4, surfaced; 3 rolls building paper, 600 square feet roofing paper, 10 pounds 20d nails, 10 pounds 10d nails, 40 pounds 8d nails, 12 pair strap hinges, 2 gallons good paint and 10 yards heavy bleached muslin.

"This material can be bought for about \$80. The labor, if hired, will cost from \$30 to \$50. A handy man at building can do the work himself with little outside assistance."

CANNIBALISM IN CHICKS

When I started my chicken ranch in Monterey, Cal., I thought I knew pretty much everything there was to be known in the care of poultry.

It was not my first experience with chickens, but it was the first time I had come against the pugnacious side of the Leghorn good and hard.

My own incubators did not hatch out chicks fast enough for me and I bought them already hatched at one of the chicken factories on the coast.

I got along fine with the chickens which came from my own incubators, but I struck something in the line of poultry trouble from almost the first day that I put the first batch of 300 imported chicks into the brooders that I had not encountered before, and it took the swelling out of my head.

I bought several thousand of the little fellows and had them shipped to me in lots of 300 for the sake of convenience. The trouble appeared, when the chicks were about three days old, in the shape of a bloody foot at which a flock of the youngsters were picking. I took out the wounded bird. A few hours later there was another wounded

bird in the brooder. Then I saw two, three, four, six, a dozen, within as many hours.

I was stumped.

Still I kept the birds with the bitten feet away from the others and by watching the flocks closely for a week I had little more trouble—for a time. Occasionally I found a wounded bird, and I simply took him out of the brooder and put him by himself.

When the next batch of 300 came I had the same trouble. I watched the birds and found that certain ones would dive under the others. I supposed they were trying to get on the inside of the flock to get a warmer place. I soon discovered that they were biting feet. I also found that the ones that did the biting invariably had empty crops. I took the biters out and tried to learn them to eat—food. Some learned. The others died, as I did not bother with them after a reasonable amount of work with them.

I thought the cannibalism was over.

As each flock of birds grew to be about two weeks old the foot-biting was renewed with redoubled vigor. I never went to the brooders but I found birds being pecked at. In the earlier stages of the game I supposed that the birds had simply taken the tiny white nails for seeds. But when the older birds began to bite each other I was again nonplused.

"Give 'em meat; they want meat," said one of my friends. "It is the lack of worms and bugs that makes them do that."

I could not understand why the birds I had raised in my own incubators did not try to eat each other up, but I gave them meat—cooked. The biting went on and gradually I found myself accumulating a flock of toeless birds.

"They want raw meat," said another friend. "Worms and bugs are raw, you know." I gave them raw meat, but this seemed to make them worse.

"They want blood. Feed 'em blood. They are high-strung fowls and they need blood."

I gave them blood—in their food, in their water, and pulverized as I got it from the store. But the foot-biting continued.

I was in despair. To make matters worse, as the birds got older they began eating each other. Two of my flocks, the oldest ones, began doing this. They would select a pullet, pick at the bare places under the wings or the tail and soon I would find a dead and partly eaten bird. These birds never were cured of cannibalism.

I was frantic.

Finally the truth dawned on me and I have had no trouble with my birds since. I discovered that I was crowding too many birds to a brooder, and keeping them in small enclosures too long.

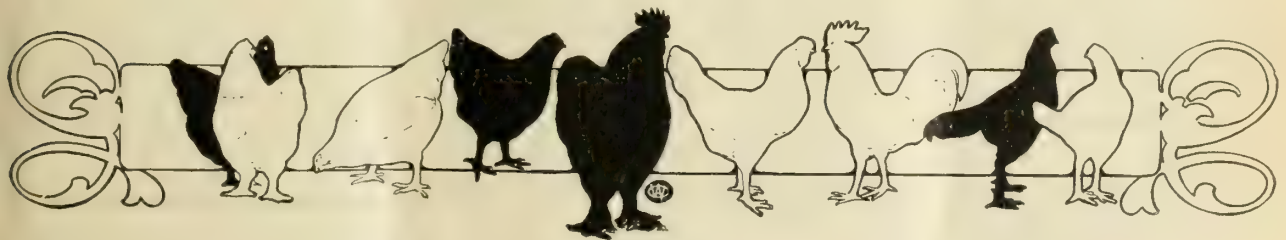

When I learned this truth I changed my method of handling them.

I had large, home-made, kerosene-heated brooders capable of holding 300 good-sized chickens at a time. But I ceased to put more than 100 birds in a brooder and I gave them range in large enclosures as soon as they were old enough to find their way in and out of the brooders.

I had one other mix-up with a hatched-to-order flock when I put them into a brooder which had not been properly heated. Half of this flock got bowel trouble, and I had a time with them, but I brought most of them out of it by giving a drop of castor oil internally and using olive oil externally.

I picked up \$1,000 worth of knowledge on that ranch in the treatment of birds, but the foot-biting promised to send me to a daffy house before I discovered the trouble.

Charles C. Wentzler.

GUARANTEED SUBSCRIBERS.

With each subscriber to our publication we positively guarantee, while his subscription lasts, that no advertisement is allowed in our columns unless we believe that any subscriber can safely do business with the advertiser, and we agree to make good any loss which any such subscriber may sustain by trusting any such advertiser who may prove to be a deliberate swindler; but we do not undertake to adjust trifling differences between subscribers and responsible advertisers. To take advantage of this guarantee, written complaint must be made to the publisher within two weeks from the date of any unsatisfactory transaction, with proofs of the swindle and loss, and within two months from the date when the advertisement appeared, and the subscriber must prove that in writing to the advertiser he said, "I saw your advertisement in the American Poultry Journal."

A. P. A. Annual Meeting

The thirty-fourth annual meeting of the American Poultry Association will be held at Niagara Falls, N. Y., commencing August 10, 9:30 a. m., 1909. This will be one of the most important meetings ever held by the association, and questions of interest to every breeder of thoroughbred poultry will be discussed and decided. Therefore every member of the association should endeavor to be at Niagara Falls on the above-mentioned date.

Methods of Poultry Management in Maine

The work in poultry management at the Maine Experiment Station has been of great value to poultrymen, especially those located in the colder portions of the United States. Systematic work with Plymouth Rock hens was begun more than ten years ago with a view to an increase in the yield of eggs, and to developing the most satisfactory methods of hatching, rearing, feeding, etc.

An interesting feature of the work is the use of trap nests. A band with a number is placed on the leg of each hen. The nest boxes are constructed so that the hen as she goes in springs a trap, which closes a door after her, and she remains a prisoner until released by an attendant. In this way an exact record of the egg laying of each hen is secured, and the experimenter is able to select the best for breeding purposes.

The United States Department of Agriculture has issued for free distribution a farmers' bulletin describing the methods of poultry management at the Maine station. It describes in detail the construction of the buildings used, especially those known as "curtain-front" houses; the methods of feeding; the use of disinfectants, etc. It contains many ideas and suggestions that will prove helpful to the practical poultry raiser.

Amos D. Burhans Added to A. P. J. Staff

American Poultry Journal is pleased to announce that it has secured Mr. Amos D. Burhans for the coming show season to represent it in the West. His territory will embrace the states of Missouri, Kansas, Nebraska, Iowa, South Dakota, Minnesota and Colorado, the leading shows of which he is now planning to visit in the interests of the breeders of these sections. For more than ten years Mr. Burhans has been traveling among the yards of these breeders and their exhibitions and knowing this country well will be the right man to give the business of the western breeders the attention that we have known it to deserve.

We have felt the need of placing a man in this field to care for business and now can assure those who may not be personally acquainted with Mr. Burhans that we have been able to secure one who is capable and painstaking. Mr. Burhans has been contributing to the American Poultry Journal with more or less regularity for a term of years and those readers who are acquainted with his writings will be glad to know that he will give us the ideas he picks up from among the breeders of this section that is now producing some of the best birds in the land. Friends and acquaintances of the American Poultry Journal who would like to have Mr. Burhans call on them during the fall and winter and inspect their flocks should let us hear from them early, as his arrangement of dates is well filled and growing longer as the weeks advance.

L. J. Stahmer, Poultry Artist

We are pleased to be able to announce that we have secured the services of L. J. Stahmer, of the Artists' Advertising Agency, as our poultry artist, who will in the future devote his entire time to

artist work for American Poultry Journal.

Mr. Stahmer is a thorough fancier, having bred fowls for many years, and for the past ten years has devoted his entire time to perfecting himself in the art of painting and photographing fowls. He has done work for U. R. Fishel and many other noted fanciers who have tried them all and they unhesitatingly pronounce Mr. Stahmer's work superior to all others, which we believe is the highest recommendation that can be given to any one. Therefore, we are very fortunate in securing the services of one who is so capable and thoroughly familiar with all branches of the work.

We are now in a position to do artists work of all kinds, including line drawings, retouched photos, color work, letter-head designs, cards, trade marks, catalog covers, illustrations and designs for advertising, sticker designs, etc. Also to retouch any photos you may have and correct, take out or fill in any little detail you may desire, and to make all kinds and any size of cuts.

We are also prepared to send Mr. Stahmer to your place to photograph your birds, plant, etc. He will also visit the large shows the coming season in the interests of American Poultry Journal.

Sameness of Reading Matter in Poultry Journals

Sometimes we hear the remark, "Oh, there is such a sameness in the reading matter in poultry journals." Well, yes, this is true, but remember we have new recruits joining our ranks every day, people who don't know how to set a hen or how important it is to have cool, fresh water available, and many other simple things. And personally we have seen old breeders who would do well to read and heed much of this advice intended for the beginner, especially when we say, "Look out for lice."

We often get careless these warm days and "all played out," and it isn't very pleasant to clean out hen houses and spray and whitewash. But those lice never seem to get "all played out;" the heat agrees with them; they breed and suck the life out of your chickens twenty-four hours every day. Perhaps, dear reader, this means you; better take a look around. Few poultrymen ever think they have lice. Remember they eat up the profits and then some. So you see there must be a sameness to much of the reading matter in our journal, but we endeavor to make it interesting, instructive and as spicy as possible. We have many new features in store for you in the near future. We, like the lice, "never sleep" when it comes to making the American Poultry Journal better.

We have added some new blood to our ranks lately, and they have some new ideas which will be incorporated in our journal in an early issue. Keep your eye on the American. We want every one of our readers to feel we are your friend.

A Question of Classification

Since the advance reports of the committee having to do with the revision of the American Standard of Perfection, there has been awakened no little discussion as well as a bit of righteous indignation among the more advanced breeders, due to the fact that the Cornish fowl is still kept in the oriental class

rather than the English, to which it rightfully belongs by reason of its origin and economic values. Taking its inception in Cornwall, England, and originating from an ancestry of mixed bloods wholly of the English and Game class, there are no reasons for placing it as it is at present. For the past fifty years it has found its greatest exploitation and development among the fanciers and breeders of England; for a like period it has been classed as a table fowl, ranking superior to the Dorking, Wyandotte and Plymouth Rock. Indeed, it has been found of great advantage purely as a cross for breeding table fowl, and in its purity, its chief consideration has been its plump carcass for market poultry, excelling all other breeds in the quality and quantity of breast meat carried. This being so predominant, it seems indeed strange to find it classified as an oriental bird—a ruling that at times looks a trifle sinister. Can it be possible that the interests centering in the American class fear its advent in the English class, thus giving the Cornish an opportunity to compete in the classes of table poultry in the showroom?—Los Angeles Times.

Great Power of Advertising

John Silber, of Newkirk, Okla., was some time ago sent to jail charged with tampering with a switch. While there he read in a newspaper of an offer of \$3 for the most original want ad. Silber inserted the following:

Wanted—Young man in jail wants out; suggestions solicited that might result in immediate release; wants poet's address who wrote, "Stone walls do not a prison make or iron bars a cage." Address John L. Silber, Kay county jail.

He got the \$3, a lot of sympathy, candy, flowers and pie and so much attention in his case that it resulted in an investigation proving his innocence, and he was released from jail.

Moral—Advertise in American Poultry Journal and do not wait until you're put in jail.

Do It Now

Life is no time to fool and play
Or go a loafing on life's way,
The night will come when sets the sun
With stacks of work you've left undone.

The next day's work crowds in your way,
With work that's left from yesterday,
And sets your spirits feeling blue
To think of all there is to do.

—Albert E. Vassar, St. Louis, Mo.

You can't expect to put off feeding your chickens till tomorrow and have them do well. If you don't keep the hen house clean lice and disease result. Clean fresh water is also necessary to success. Don't overfeed; keep them active and you will be successful.

Poultry Judges' Association

We have written on this subject before, and are pleased to know that we now have a real live judges' association with C. W. Zimmer, Fort Wayne, Ind., as secretary, and that its first annual meeting will be held in connection with the A. P. A. meeting at Niagara Falls in August.

There can be no question to our mind but that this organization will prove of immense value to the fancy. At this

time the important question is to enroll all the A. P. A. judges. None other, as we understand it, are qualified, as the aim is to work in conjunction with the American Poultry Association. The field offered for this work is very large and it is now plainly up to all qualified judges to join and lend their aid to improve the present conditions and to bring out with united effort all that is possible for better and more uniform work.

The important questions that confront the poultry judges of today can best be adjusted by united action. All efforts that we can make to secure uniform work will prove a great, large boom to the industry unparalleled by that of any other action. If the ideas suggested by this association are carried out (and they can be) then we can see the dawn of the day that will give us the proper interpretation of the Standard from coast to coast.

This is but one of the several important matters for this association to adjust, there are others, close up in value, both to the poultry association and to the exhibitors as well. The man who wears the duster at the shows has much to contend with, and as may be expected, the principle idea of this association is to better his condition. If we can make him more competent, as well as to further educate the exhibitors along lines that are simply correct, then we can well demand credit due with proper recognition and remuneration.

I believe this association can and will be a benefit to its members and to all poultry interests, and I would urge all eligible persons to make an extra effort to meet with the A. P. A. and its judges. For some years the question of this organization has been before us. Now that it is an accomplished fact let us all turn in and give our aid for the interest we have in Standard bred poultry and its success.

H. P. Schwab.

Standard Revision

The Standard revision committee has finished its work and it is now up for a hearing, and then to the August meeting of the A. P. A., to either adopt their recommendations or to veto them. At this writing I haven't seen the complete official report of their work and recommendations. But from what I have read in the papers it looks from here as if that committee, were one of the first live ones we have had to deal with. They surely are a progressive one, and their work if adopted will insure a great long step forward. Evidently their endeavors were for the general advancement. They have done well, and I trust their recommendations will receive approval, with probably one exception.

Disqualification for that which really is only a defect has been an eyesore to the poultry business years too long already. An off-colored feather or feathers, or even a stub, can justly only be termed a defect, and if so considered, and cut in points values for such, then both the specimen and owner will receive their due. For this makes the penalty proper and in proportion is all we can ask or desire.

If for such defects, minor defects we may well say, which are by chance often overlooked by the exhibitor, we should persist in disqualifying, then we

are placing a handicap on the birds and exhibitors alike, besides placing a premium on what is commonly called faking. Also when under the present rules we disqualify a specimen, no matter how grand it may be in every way but the one, we cast it out of future consideration and place a ban on it that is never raised, when under proper conditions I believe the chances are even for that same bird to produce 90 per cent of chicks free from the same defect.

According to the reports we have the side-sprig question was the only one not to receive unanimous approval by the committee, and no doubt a contest will be made on this question. The side-sprig is rather a serious defect to be sure, to disqualify it is also rather serious, therefore we would prefer to treat it as a defect only, with a severe penalty attached, one of not less than two points for each sprig or evidence of same. These side-sprigs are not near as apt to breed or reproduce as are the double-pointed combs, so why should we only cut for the one and disqualify for the other? Defects of this kind are really a rarity and not near as common as some suppose, nor are they as dangerous.

The changing of the Standard weight in Plymouth Rock pullets is the exception I have mentioned. To change their weight from 6½ pounds to 6 pounds seems radical to me under the circumstances. The committee may have good and proper reasons for this, and until I hear further on this subject from them I would oppose any such change. In this let them show the people the advantage to be attained by this giving away of one-half pound of weight. The Plymouth Rock laying weight is from 6½ to 7 pounds, and at these weights they are at their best. From a strictly exhibition standpoint only can there be an advantage gained in this weight reduction. The late hatched and smaller specimens carry the brightest color, and consequently make the best show bird. With the weight as it now stands (6½ pounds) the Plymouth Rocks have made their reputations as a practical breed and have conclusively proven that at this weight they are at their best and we would think long and hard before we would sanction a change.

With this one exception I fully believe the committee has done really grand work, in this age of advancement it is up to us to keep abreast of the times, we can well afford to be liberal in mind and action, so let us take a broad view of all questions, compare notes, and then go to the A. P. A. meeting fully prepared to act as our best judgment dictates for the best interests of the fancy.

H. P. Schwab.

Australian Laying Records

The faithful little Leghorn has again demonstrated that she is a payer and a great money maker if given care and attention. We have at hand the records of the latest Australian laying competition held at the Hawksbury college, the original year tests, and note that a pen of six White Leghorns, Single Comb variety, made the remarkable record of 1,379 eggs. For the two years just ended a pen of Whites of the same breed made the record of 2,624 eggs, the same six hens competing from the start of the two years to the end. At the top of

Baby Chicks

S. T. Campbell - - Mansfield, Ohio

the list for the last year's competition are five pens of Leghorns, all Whites, none of them falling below 1,312 eggs for the six hens or pullets in the yard. This means something to the Australians, for they have been breeding now for about ten years for better layers and are getting them better every season. Black Orpingtons were sixth in line with a record for the year of 1,288 eggs. This breed also produced the highest number of eggs in one month, 159. A hundred and fourteen Leghorn layers in the last year's test laid an average of 199 eggs each, which is pretty fair, anyhow, with the lowest pen of this breed going but 949. Black Orpingtons made an average of 177 eggs for each layer in the year's contest. Egg laying competitions have been so helpful in getting the poultry industry of that country to the front that the breeders there have developed into the greatest egg fanciers the world has ever known and already hens from that sunny clime have traveled this way to make their mark. The heat and dryness of the past couple of seasons has contributed largely to the successes of the Leghorns, so Mr. Thompson says, who has charge of the contests, and on one day the glass rose to a hundred and sixteen, which puts a crimp in the record that Kansas set during her time of the blues. Forty hens succumbed to the heat on that day, so the report of the test declares. During the early tests the Black Orpingtons and the Silver Wyandottes held the palms for high averages and the men who are closest in touch with these tests say that when the cycle of wet years again comes 'round they will take the place at the head of the lists.

Feeding for eggs has been reduced to a wonderful science in Australia, as the work of those who feed the layers to attain such averages will attest. The poultry show and competition in it is not lacking there, either. They hold just as good shows as ever they did, but the laying contests keep the live fanciers awake every month of the year, for the standings of the various pens are made known from month to month. Attempts over here to hold laying tests of any considerable scope have failed, but we hope before long to chronicle that breeders have at last agreed to get things going along this line.

The Spotlight

Several men have taken up the bluff, or whatever you are a mind to call it, of Miller Purvis and want to bet him money that they have hens and lots of them that can lay better than two hundred eggs per year. Brother Purvis says nothing, or little of anything, and looks wise as he can. When he comes to the A. P. A. election he says we told you so, in such plain language that you can hang your hat on the point he makes. California climate is sort of rejuvenating Purvis.

Some of those who know what they are talking about declare that this circuit of poultry shows business now agitating the different states is but the work the A. P. A. might do. What do you think about it?

Buckeye breeders are getting worked up over the drop from the Standard that their hobby has suffered. Better be on hand, boys, when the roll is called at Niagara Falls in August. The Buckeyes are a good breed and should not be dropped and a little plugging on your

part will save your birds. Garnets has been suggested as their name.

The Connecticut summer school of poultry culture is in full swing by this time. A big class is reported. The idea was started with some timidity, but has developed into a great thing.

The friends of Mr. Gorline will be busy a long time in gathering up his remains after all the editors have shot their inkpots at him. There are a lot of us who are watching the shots that go wild and the shots that hit and getting some real fun out of it.

Secretary Kimmey has just sent out the proposed amendments to the constitution and by-laws of the A. P. A. Some repeals are also desired by certain parties. One of the best jokers in the pack is that relating to the office of secretary, which it is hoped to make appointive by the executive board. Some one is going to see their pet hobby killed in this instance!

Minnesota gets two thousand five hun-

BARRED PLYMOUTH ROCK.

Brother to World's Champion, 1906. Bred and owned by Bradley Bros., Lee, Mass.

dred a year for instruction in poultry keeping. All of which is not so bad after all.

And now it comes out that Trafford was once a blacksmith, and they say he was a good blacksmith, too. That accounts for some of his strong talk.

We hope the plans for a bigger and better Chicago show go through. We can use more good shows, the real hot kind with some scope to the entries, and real top liners as judges.

We recently received a communication from G. B. Smith, North Baltimore, O., in which he says: "I have just weighed two eggs one of my S. C. Black Minorca hens laid, and they weigh four ounces each. The two weigh one-half pound. They measure $6\frac{3}{4} \times 7\frac{5}{8}$ inches around. This hen lays a very large egg at all times, and about one each week of these large ones. She lays almost every day."

The New Hampshire Poultryman, published at Antrim, N. H., is one of the many new poultry publications that have come into existence during the past year, and from reports received is doing well in the territory they plan to cover, which is New Hampshire, Vermont and Western Massachusetts. There is room for all, and we wish them every success.

Subscription Department

CHATS WITH SUBSCRIBERS AND SUBSCRIPTION WORKERS.

We wish to call the attention of our readers to the articles which will appear under the above heading each month. These articles will be for the benefit of subscribers who wish to renew their subscription to American Poultry Journal to the best advantage, as well as for those who get us new subscribers. It will give our readers the details of our subscription work and the experience of our various representatives in this work.

We want you to digest the contents of this page every month, and we are positive that we can increase the number of poultry fanciers in your community and incidentally increase your sales of stock as well as eggs.

We want to show you that American Poultry Journal should be read and is read by the majority of poultry breeders, that new subscribers realize the fact that they cannot make a success as breeders unless they have good stock. We presume that you have good stock in your yard, and if you have you will be surprised how inquiries for this stock will be received from people whom you have interested in American Poultry Journal.

This month we have received several letters from satisfied readers of American Poultry Journal, who showed their appreciation of the good American Poultry Journal was doing and sent in several subscriptions, and in payment thereof were rewarded with commission and various prizes, besides "boosting" their sales. Mr. Geo. J. Grimm writes us under date of June 11, as follows:

Gentlemen: I received your favor of the 9th and will say that according to my list of subscriptions that I got for the journal 102 is correct. I will send a few more next week, but I do not think it will be very many, as I have this district pretty well worked out. I will always have a good word for the American Poultry Journal for the courteous treatment and prompt answers I received from all my correspondence with you. No matter what my prize will be, rest assured I will be satisfied with it, as I have drummed up quite a trade for my own stock of Fishel's W. P. Rocks, which I breed on a small scale. Through going around with the Journal I have had a chance to sell quite a number of settings of eggs, also young chickens and all my surplus stock, and I could sell many more if I only had them.

I also received the set of brushes which you were kind enough to send me. It was quite a surprise to me, as I did not expect anything of the kind. Thanks very much for the same, and if I can pick up any subscriptions for the Journal after the contest closes I will cheerfully send them. Please advise me whether I can sell them for the same price after the contest closes or if it will be 50 cents per year. I remain,

Yours respectfully,

Geo. J. Grimm.

Seranton, Pa.

We will be pleased to hear from others at any time as to their experiences with people whom they induced to subscribe to American Poultry Journal, and we will publish these letters each month for the benefit of our readers.

If you wish to express your opinion as to the merits of American Poultry Journal or as to the treatment you received from its publishers in the way of rewards for your efforts do not fail to let us hear from you.

If you want to help increase the poultry industry and also your sales read these articles as regularly as you do the editorial. Be a promoter, we will pave the way. Give these columns your attention regularly and you will be rewarded for your time, as were the following:

Winners in Subscription Contest.

The following are the names of our readers who won the grand prizes in our great tenth annual subscription contest, which closed June 18, 1909, besides being rewarded with special prizes and commission:

Those who were not successful in getting enough subscriptions to entitle them to a grand prize and who did creditable work, receiving only their commission as well as special prizes will not regret the work they have done. We congratulate the winners and thank our readers one and all for their work in getting subscriptions to American Poultry Journal.

NORTHUP'S MINORCA FARM SOLD.

Editor American Poultry Journal,

Dear Sir: Will you allow me space in your valued paper to say to my patrons and poultry correspondents that I have sold Mettowee Valley Poultry Farm, where I have bred the famous Northup strain of Black Minorcas for the last twenty-one years, to George W. Hey, formerly of Bozeman, Mont. I have also sold him my entire stock of Single and Rose Comb Black Minorcas, more than five hundred mature birds of the finest quality I ever owned and all my chicks of 1909 hatch, together with all my incubators, brooders, cuts, poultry appliances of every kind, lists of customers and correspondents, office furniture and supplies, and good will in business. I have also sold to Mr. Hey my stock of books entitled "Minorcas of Every Comb and Color," recently written by myself, and the copyright of same. Further, I have agreed not to breed Black Minorcas so long as Mr. Hey continues in the business.

This farm is undoubtedly the largest and most complete establishment devoted entirely to Black Minorcas, or to any one breed of fowls in America. It has eight large breeding houses, with slate roofs, cement and stone foundations, twenty-

five colony houses and the finest and most complete brooder house I have ever seen. It was built, heat and ventilation installed, from my own plan, by which the air under the hovers is controllable to a fraction of a degree, and the air is continually brought in from outside the building and discharged under the hovers. The building has floor and part of sides of concrete and the windows are covered with fine mesh wire netting, making it rat proof.

While I regret leaving this work in which I have been successfully engaged for twenty-three years, it is a great satisfaction to me to place it in the hands of a Minorca fancier in whose ability as a breeder I have so great confidence. Mr. Hey has already had large experience in breeding and showing Minorcas and has won the championship of the American Black Minorca Club for winning more first prizes on Single Comb Black Minorcas than any other member in the state of Montana, and while Northup's strain of Black Minorcas has long been recognized as the best for utility and exhibition wherever Minorcas are shown, I expect they will reach even greater attainments under the skillful management of Mr. Hey. Further, I take pleasure in recommending George W. Hey to my customers as an honest and conscientious business man, for whom I solicit their patronage, knowing that he is in possession of a larger and better flock of Minorcas than any other breeder in this country, and believing that he will do his best to please his customers by giving excellent value for all the money he receives from them.

The enclosed articles of agreement give further details of this sale. Yours very truly,

Geo. H. Northup.

This agreement made this 21st day of May, 1909, by and between Geo. H. Northup, Granville, Washington County, N. Y., party of the first part, and Geo. W. Hey, of the same place, party of the second part,

Witnesseth:

Whereas, First party has sold to sec-

ond party his entire stock of Black Minorcas, both Rose and Single Combs, his good will in the business, his farm, buildings, incubators, brooders, cuts and all equipments for caring for the stock, rearing the chicks and carrying on the complete business, he agrees not to again engage in the breeding of Black Minorcas so long as Geo. W. Hey, party of the second part, is engaged in breeding Minorcas on this farm. First party further agrees to assist second party two days out of each week for three months to acquaint said party of the second part with his methods of breeding and caring for Minorcas, and to mate the breeding pens of Minorcas for party of second part for the season of 1910, free of expense, and to turn over to party of second part all orders received and which may be received for Black Minorca eggs and stock. Party of second part, Geo. W. Hey, hereby agrees, in consideration of the above, to faithfully carry out the terms published in the catalogue of the party of the first part with his former customers by honoring such rebate obligations as party of first part may have issued previous to January 1st, 1909, and party of second part further agrees to duplicate at one-half price all orders for eggs which party of first part has sold and delivered during the hatching season of 1909 that fail to produce a hatch of 50 per cent of the total number of eggs shipped, and further agrees to maintain the high standing which the Northup strain of Black Minorcas have attained, both for exhibition and utility purposes.

George H. Northup, L. S.

George W. Hey, L. S.

In Witness Whereof we have hereunto set our hands and seals this 21st day of May, 1909.
 State of New York,

 Justice of the Peace.

PROPOSED CHANGES IN THE RED STANDARD.

The proposed changes in the standard of the Rhode Island Reds are of vital importance to Red breeders, especially to those breeders who now think that we have the best standard in the book and that the future welfare of the breed demands that we let the present standard remain as it is.

This is surely worth careful consideration when it is realized that this opinion is shared by the majority of the old breeders, men who grew up with the breed and helped to make it what it is today.

It must be admitted that the rise of the Reds from obscurity only a few years ago to their present popularity is one of the most remarkable histories we have in the standard.

A writer said some time ago: "The R. I. Reds have been wined and dined and nothing left undone to push them." I do not know about the "wining," but but I think they have been "roasted" at times; perhaps this is the "dining" to which the writer had reference.

It is true that the breed has been well

Dress Economy

Simpson-Eddystone calico prints are fine long-wearing cotton goods. The patterns are stylish and beautiful, and the colors are absolutely fast. Some designs in a new silk finish. They solve the problem of stylish dressing at little cost.

Standard for over 65 years.

Ask your dealer for Simpson-Eddystone Prints. If he hasn't them write us his name. We'll help him supply you. Don't accept substitutes and imitations.

The Eddystone Mfg. Co., Philadelphia
 Established by Wm. Simpson, Sr.

Three generations of
 Simpons have made

Dr. G. W. Taylor, - Box A - Orleans, Indiana

advertised, and a great deal of space devoted to them. This may have created or stimulated an interest which would have been passing at most. The whole truth is just this: The Reds are a great utility fowl; they have made good and the demand is increasing all the time.

Now, for the proposed changes. For years the work has been to produce pullets with ticking in the neck. Now that they are coming good, that the standard is being closely approached, why take out the ticking and begin to undo the work of years? From my own experience, I do not believe that they can breed standard flights, with good tails, and leave out the ticking.

Then, again, why red in the tail? To my way of thinking the crowning beauty of a good Red is his handsome greenish black tail. When one has a good specimen with a good black tail the quality of the black is valued very highly.

The slate in under color will not help in the show room. Birds with good under color will be given the preference just as today, while breeders who want to use a little slate in their matings will do so just as they have been doing all along.

The standard may be given clearer and more complete expression to advantage. This may be done and the new drawings, such as Artist Schilling will make, will all work to the good of the breed.

Just because I may not be able to breed standard birds is no reason why I should want the standard changed to conform with what I do produce. These changes strike me that it would be putting the breed back ten years instead of advancing their interests as intended.

It must be remembered that the R. I. Reds are a new breed from a fancier's point of view, and with a new standard, comparatively speaking. I do not mean to say that the Reds are new as a utility fowl, certainly they are not new to men like Mr. Lester Tompkins, who have grown up with them and have watched their development from boyhood.

They are being bred pretty close to standard, as one can see who will look over the winners in the leading shows. Some fine specimens are being bred. The color is becoming more even and uniform, and what is even better, the true type is found in most of the winners.

It is argued that it is difficult to breed Reds to the present standard. This is true, but to the real fancier it is all the more interesting. High class exhibition stock is bringing as high prices as any breed.

Perfection, or the road that approaches to that end, will not be found under any standard that may be made. Breeding is a science, an art or knowledge acquired only by years of patient and careful work.

Before closing this I want to say something about the R. I. Reds in the south. I can truthfully state that no breed ever made such growth as they have here. Six years ago we found it hard to find any one breeding Reds, while today, go where you will, you find large flocks all over the country or the evidence at least that Red roosters are "the cocks of the walk."

The Reds are being used largely here as winter layers and to produce early broilers. In the show rooms you find more people around the Reds than anywhere else. It is no unusual thing for the Red class to form one-half the show in numbers. This was true of the show at St. Petersburg, Fla., last winter, while

in our Nashville shows the class has numbered from 300 to 500 birds.

The writer believes in progress as much as any one and also in the old adage: "In union there is strength."

But with a great breed, a good standard and the wonderful progress made, does it not seem that we should be content and let well enough alone for the present at least? Frank Langford.

Nashville, Tenn.

REFORMING A SETTING HEN.

By A. Ernest Chantler, Tacoma, Wash.

It was the second day after I had purchased the retiring rancher's outfit of 84 chickens and his lease of the two acres of potato patch (prospective), orchard and gooseberry bushes. The goodwill of the place was thrown in with the price of the ten old hens and 74 youngsters of all ages, from three months up to five. The goodwill consisted of the privilege of cutting wood from the unimproved fur forest on all four sides (if the owners didn't catch you at it) and the numberless opportunities for shooting quail, grouse and rabbits (if you paid a gun license).

I say, it was the second day after. I had taken formal possession and, although I know no more of hen culture than does a cow of astronomy, I had proceeded at once to administer feed according to Department of Agriculture Farmers' Bulletin No. 287, and was making a diligent search for eggs which I imagined should be due to arrive, when I stumbled on Mrs. R. C. W. Plymouth Rock seated contentedly on a nest of ferns in the barn manger. My predecessor hadn't had an egg from a single one of his fully-developed ten since last July. I congratulated myself and then went into the three-room log shack, sat down and awaited the coming of that first egg. I wondered what it would be like—what color; surely it would be a big one, for Mrs. Rock was a ponderous hen.

It was 10 o'clock in the forenoon when I discovered the lady aboard of the shell-product factory, and I again called upon her at 10:30. She was still laying. "Gee, I'll bet a doughnut that's a big egg," I said to myself. I called again every half hour until 2 p. m., and she was still on the same lay. My brief knowledge of lady chickens told me that she was a mighty long time on the job, and I started to put my hand under her. She made a vicious peek at my claw and looked real angry at me.

I persevered, however, and when I finally felt all around under the warm of her basement, my hand came in contact with naught save the white door-knob which I had previously placed there as a coaxer. Right on top of this disappointment Mrs. Rock said, "Cluck-cluck-cluck!"

"She's gone broody!" I said, "and I've been stung!" The man who sold me the birds had given me no guarantee that they were non-sitters, and I saw I was in for it.

Shall I set her? I pondered. The only eggs I had were two white door knobs and—anyway Christmas time is too early to bring new chicks into the world. No; I'll unset her. I threw her off the nest and she threw herself right back on the door knob again. I took away the door knob, but she still clung to the fern bed.

Then I thought of my neighbor's wife, Mrs. M—. I knew she had once boarded a dozen chickens for a year or

two, and I went over to her house for advice.

"Tie a red rag to her tail!" she promptly instructed me. "That'll break her up!"

I came home, found a piece of red ribbon which my little girl had tied around a Christmas box that was sent out to me, and on the snowy tail feathers of Mrs. Rock I made a very pretty double bow. Then I carried the old girl out as far as the clothes-line post and set her down.

Now, of course hens don't talk in our kind of language, but I was able to guess pretty near what was said by Mrs. Rock and those of her kind, so I will translate some of the remarks and adjectives which were dropped around the premises, that the reader may watch the play.

"Now, I wonder what the Dickens that is by my tail?" was Mrs. Rock's first remark, as she felt the ground strike her feet. "Guess I'll get away from it!"

She shied and she sidestepped and she back-watered and then she bolted. She took on a stride something after the style of Marathon Winner Longboat, anon glancing first over the right wing and then over the left wing. That flaming red banner was still with her, and a look of terror went into her eyes. Down through the gooseberry vines, out through the orchard she pedestrianed, and young chickens there in search of gizzard grinders, scattered and took to the apple tree boughs. Through the back orchard fence she plunged; down the cow path to the cord-wood clearing, and as she hit a fallen fir on one of the high places a

little chipmunk was startled from behind.

"Get away you pesky chippy and let somebody run that knows how!" and away she diverted to the east and circled around the ranch, darting through the barbed wire fence near the front lawn, where a bunch of Leghorns and Andalusians were snipping grass. Then she halted, panting, and finally took into her lungs a fraction of a zephyr which was trolling up from the salt water.

"Wh-why! wha-wat's the matter, dear Mrs. Rock!" cried a young Andalusian rooster who had just raised a comb and fought a White Leghorn, but was not yet on familiar terms with the matrons of the flock.

"Matter!—matter 'nough, Kid!" she squawked. "See that blazing streamer on my tail? What in Time is it?"

"But, er—ah—why are you running about in this agitated manner?" queried the just-come-out, as he cut a pigeon-wing around her front pilot.

"Running—you call that running! Watch this!" And away she started again, as the breeze from Puget Sound fluttered the pendants from her pretty bow and caught her side glance. Out through the orchard again she galloped, touching only an occasional kopje and letting out a terrifying squawk at every third jump. She made the entire circle of the ranch outside the fence, and as I saw her finally cut through past the second hen house and down through the currant bushes, I observed that she had thrown in the high-gear clutch and was going for a record. She made the first mile in about 2:08, and as she started to eat up another bunch of over 5,000 yards her wind gave out, and shoo'd herself under an old pile of lumber.

By getting down on my five dollar vest and busting a button off from my pantaloon where my suspender was wont to cling, I finally reached the tip end of the red bow, and it came away with the two feathers of Mrs. Rock's tail to which it had been tied.

I left Mrs. Rock to come out at her leisure, which she did, and—dad gash her! she's still broody.

WILD MALLARD DUCK CULTURE.

Some years ago, I observed how difficult it was under the stringency of the game laws to procure wild game in the open markets, that with the continued increase in these restrictions from session to session of the legislature, the difficulty became greater and the desire for it proportionately stronger. It occurred to me that, if this game could be raised on the farm or in the preserve and lawfully sold, it would meet with a great demand and possibly prove a source of profit. These conditions led me to experiment, in an attempt to raise several kinds of game in confinement. Owing to their wild nature and their tit-bit manner of gathering their food in places of seclusion, I found it very difficult to afford them the environments, the food, and the sparse distribution of the food, so as to require them a whole day's work to appease their hunger, as they find their surroundings in a wild state. The quail never becomes tame; great care must be exercised or they will kill themselves flying against the wires of the enclosure. Prairie chickens and pheasants are more susceptible of being domesticated, are not near so wild as the quail and will feed with the domestic fowls and go to roost with them. Neither of these can be crossed with our common chickens, hence

there is no opportunity of eliminating their wild natures by instilling tame blood. Wild ducks are quite different. When hatched along with our common tame black ducks they at first appear a little shy, do not seem to observe the slight difference in the color and habits of their companions, will plod along all day with the flocks of youngsters at the swimming pools and come up to the feeding pens for their meals at the feeding hour. As they grow older, and begin to fly about the premises, their wild instinct to break away from so monotonous a life as on the farm asserts itself and you have to clip their wings if you expect to keep them. Of the various kinds of wild ducks, the mallards are the most docile; they take up and cross with the tame ducks very readily. What is known as a top cross, that is, a wild drake with a tame duck, produces a progeny bearing a close resemblance in color of plumage and form to the wild race; while a cross the other way produces a duck very much resembling the mother bird. By pursuing the top cross method for four generations, avoiding inbreeding, you have a race of fowls with fifteen-sixteenths wild blood, which is as far as you dare carry the process of the elimination of the tame blood, if you wish to hold them. The attorney-general of Illinois holds that this trace of tame blood brings them fully within the law and that they can be lawfully sold both in and out of game law season. We have been operating a plant of 2,000 capacity for several years, raising the domesticated Wild Mallard ducks. Being amply supplied with swimming pools, which are replenished twice a week with fresh water by power pumps, they are as contented and healthier than our tame ducks. Their eggs run from 90 to 95 per cent fertile, while those of our Pekins run but 75 per cent. They hatch easily in the incubators, as they give off much less of the noxious gases than the tame duck eggs. Their hatches run from 75 to 80 per cent, against 50 and 60 per cent with the Pekins. The mortality of the Mallards averages 5 per cent among the youngsters, against 15 to 20 per cent of the other kind. We keep close tab on the feed account of all our poultry. Wild Mallards cost us 6 cents a pound to bring them to the marketable size, 3½ pounds, at the age of 12 to 14 weeks, when we sell them direct to the consumers at 20 cents a pound on foot. Pekins cost us 7 cents a pound when brought to the marketable size of 4½ and 5 pounds at the age of 14 to 16 weeks, when we sell them in the open market to the commission men at 9, 10 and 11 cents a pound, less the commission of 5 per cent. The laying season for the Mallards is almost over when the Pekins begin to give us eggs, hence we raise a great many of them for the late hatches to keep the incubators going and the brooder house filled, but there is no money in them compared with the Wild Mallards.

L. A. Richardson.

Marine, Ill.

Roofing paper is cheap and easily put on. Don't let your little chicks get wet, it stunts them and but few ever amount to anything afterwards.

Feed only what the chicks will clean up at once. Don't allow feed to lay around and become filthy before the chicks eat it.

Remember little chicks need grit, lots of it. Keep them supplied with it right along.

EFFECTIVE ADVERTISING.

Effective advertising must awake human interest and touch the chord that responds. To begin with however the article or stock advertised must possess the merit that wins your own honest, ungrudging approval and praise, then and only then can you strike the key that will produce the responding note in those that read.

Your advertisement however may pass unread if not properly or attractively prepared. Therefore a medium should be selected that is up to date and progressive, maintaining an efficient staff of workmen as evidenced by the reading matter furnished to its readers and the fashion in which its pages are clothed by the printed characters.

Every advertiser who uses more than one publication should in justice to the publisher key his ad by including in his address some box number, street, letter or rural route, unlike any used at his home postoffice, explaining to the postmaster if necessary his action and reason for so doing. Thus John Jones, of Saugatuk, Mo., may add to his address Box 701 and as there is no such box number at his postoffice, by properly explaining the matter to the postmaster there will be no trouble in delivering his mail properly. Now if two or three publications are used he may give his address as Box 701 in one, 702 in another and so on. When an inquiry reaches him the box number on the envelope at once tells what paper secured it. In this way the comparative efficiency of different papers may be ascertained.

Every display ad would secure much better results if it was illustrated by a striking cut of a really good bird. However, many a fine bird has been poorly pictured and thereby driven away trade rather than brought it. A professional photographer can usually do better than the amateur and is preferable. By all means have your picture a good, clear, distinct representation of your fowl in his best posture. I recently purchased a bird at a sum requiring two figures to express it from certain breeders and was attracted by their ad because it pictured one of the most perfect shaped birds I had ever seen. Being a printer by trade I knew that the cut was a half tone prepared directly from a photo with little if any retouching. So this cut of a fine male, and the fact that a judge of my acquaintance had informed me that one of their cockerels in the hands of a customer had won a first at a show he judged, led to my order and this brings me to another important consideration.

To make advertising really effective every transaction must be one in which the customer is satisfied. My first order for eggs was sent to E. B. Thompson because a friend of mine had stock of his breeding and I could see, green as I was, that they were good. So Thompson got my \$5. A cockerel that scored over 90 points was a result and I put \$9 more after it the next season because I was satisfied. So it goes on the sphere of the man who pleases his patrons, giving always a little more than expected, is bounded by a constantly increasing horizon and he never has time to wonder why advertising don't pay. While the man who sends out unsatisfactory stock or eggs may

pull out all the stops and the knee swells as well and fail of lasting effect. A following of "knockers" will down anyone. The man who regards his list of customers as his most valuable asset will find in the end that they are for their repeat orders and steady boosting goes on when the magazine they first saw his ad in has been laid away for good.

Fort Atkinson, Wis.

THE CITY MAN IN THE POULTRY BUSINESS.

While living here in the country we hear of some city man coming here to make a living raising chickens. Nine times out of ten they go back broke. Why? The city man thinks it is all pleasure and profit to raise chickens.

At this time of the year they commence to come to the country. In the first place they put about all they have

BARRED PLYMOUTH ROCK.

"Champion's Nephew." Bred and owned by Bradley Bros., Lee, Mass.

in a small farm, the rest they put in stock. After a while they have to give up and go back to the city. Why?

I called on one of our city fanciers one morning. It was then 9:30 a. m. I knocked at his door, but got no answer, so I knocked again. After a little while the wife came to the door. I asked where Mr. B— was. "Oh!" she said, "he is still in bed." After a while he came out. I asked him if he always slept as late as this, and he said, "Yes, most of the time." Now when a man sleeps until 9:30 and don't feed and water his chickens, how can he make any money? He told me he was going to sell out and go back to the city. I asked why. He said: "While I was in the city I got out a piece of paper and a pencil. I figured that one hen ate so much in a year and one hen laid so many eggs in a year. One hen earned so much in a year. If one hen would do all of that in one year, 1,000 hens would more than keep me, and I could earn it much easier than here in the city. But," he said, "I figured it wrong, so I am going back to the city." That is why so many of our city men fail. If they would only go to the country and rent a small farm and raise a few thoroughbred chickens the first year and learn something about the chicken business they wouldn't have to go back to the city. If we expect to do anything with our chickens we must be up and at it early and late, all of the time. It's

no child's play. It takes real hard work.

The first thing to do is to get a pen of extra good birds. Eggs are very uncertain. I would much rather have the stock. It may cost more at first, but it is cheaper in the end. You have your stock to breed from; you can see from what you are breeding. If you start with four good hens you can set a hen every four days. Just see what you can do in a season. Always treat your setting hens as if they cost you \$100. When your chicks come out don't be in a hurry to feed, and above all don't feed anything wet. Get a good grade of chick feed. Give the hen and her chicks a good, warm place—lots of sunlight. Handle the chicks and get them used to you. Treat them kind; get them tame; love them and work for them. Then you will see good results. Chickens are like thoroughbred cows; if you or your help go among your cows and club them and abuse them, how much milk would you get? The same with your chickens. If you scare them to death every day, don't look for eggs. Work among them as if they were your pocketbook, for there is where your money comes from.

Bring your chickens up right and you will have no trouble.

A WORD FROM MR. GRAVES.

We recently received from Mr. W. R. Graves, Southboro, Mass., the following communication, and believing that Mr. Graves is entitled to the privilege of presenting his side of the case to the poultry fraternity, we willingly give space for its publication.—Ed.

I have not stated my version of the transaction with Mr. Thomas Ambrosius, which has been given such adverse publicity by the Reliable Poultry Journal, because of my desire that the matter should first be determined by the executive committee of the National White Wyandotte Club. As my attorneys are in receipt of a letter under date of May 27 enclosing a copy of what purports to be the report of the committee, signed by Mr. Charles D. Cleveland, Chairman, bearing date May 3, I believe it proper to call to the attention of the poultry fraternity what actually transpired as appears by the testimony taken before the committee at Madison Square Garden, and also by letters and records which I have in my possession.

It might interest the poultry fraternity to learn that on May 15, 1908, in a letter to the Reliable Poultry Journal, I cancelled my advertising contract, to take effect at once, and that on September 15, four months after the cancellation of my contract with the Reliable Poultry Journal, Mr. Curtis writes me he will no longer receive advertising from me for publication in his paper. As to Mr. Curtis' impartiality and desire for justice I need only say that not once in all the articles which have appeared in the Reliable Poultry Journal concerning me, has he mentioned the name of the person with whom the transaction was had, a Mr. Thomas Ambrosius, of Collinsville, Ill.

A recapitulation of the entire transaction with Mr. Ambrosius is as follows: Mr. Ambrosius wrote me a letter, to which the published letter of October 27, 1905, was an answer, inquiring as to the price of my birds. My letter of October 27 quoted prices on birds and stated that I would not sell the birds after I was notified that I was to judge the Chicago show. I received a letter from Mr. Ambrosius asking me if I would guarantee the birds to win. My answer to that letter was under date of November 3, 1905, in which I stated that I would not guarantee the birds to win, and that if I judged at Chicago I would do it on the square, and the best bird according to my idea would win, regardless of who owned it.

I also stated that I would rather sell him a string to show at New York. I received a letter from Mr. Ambrosius stating that he had given up the idea of showing at New York. I wrote him regretting that he was not going to show at New York, and that I would sell him the two cockerels and two pullets referred to in his letter. Mr. Ambrosius, by a letter under date of November 23, wrote me stating that he would take the two cockerels for \$125 and the two pullets for \$50, and that he was going on a hunting trip, starting the next day, and would be back by the next week, when he would send check for the birds. I subsequently received a letter from Mr. Ambrosius, dated December 9, 1905, enclosing draft for \$175. I received another letter from Mr. Ambrosius, dated December 19, stating that he had sent draft and asking why he had not heard from me.

I wrote him the published letter, dated December 26, 1905, stating that the birds had been shipped, and describing them. Under date of January 1, I received a letter from Mr. Ambrosius stating that the birds arrived O. K. and that he was well pleased with them, also that Ross Hallock thought well of them and that he had told Hallock that he had raised the cockerels.

The transaction with Mr. Ambrosius was consummated by a sale of the birds to him in the acceptance of Ambrosius in his letter of November 23 of the proposition of myself to sell him the two cockerels and two pullets for \$175. The fact that the payment for the birds was not made at that time does not affect the transaction from a moral standpoint, and legally the contract was forcible as against either one of us. So that it will be seen that the sale of the birds took place November 23, 1905.

Now, as to my judging at Chicago. I received a letter from Mr. Frank B. White, Chairman of the judges' com-

First Prize White Wyandotte pullet at Toledo, 1909. Owned and bred by George Barkdoll, West Unity, Ohio.

mittee of the Chicago Poultry Show, dated November 18, 1905, in which he stated that the price named by me prohibited them from engaging me to judge at that show; that \$60 was their limit and under no consideration would they go beyond that price. I wrote Mr. White that I would go for \$75 and he answered me that the price was too high.

I received a letter from Ross C. H. Hallock, dated December 2, 1905, in which he stated that White would not pay over \$60, and that if I could not see fit to accept that he (Hallock) would see that the club would fix matters so that I would not lose. I subsequently received a letter from Mr. Frank B. White on either December 5 or 6, which letter was dated December 4, and stated that I could consider myself engaged to judge at Chicago. I believe it can be truthfully said that up to the time Mr. Hallock entered the transaction, on December 2, I had not been appointed to judge at the Chicago show, and so far as I knew I would not be engaged to judge there by reason of our failure to agree on my compensation, and it was not until December 5

or 6 that I received word that I was appointed to judge at Chicago, and the sale about which so much ado has been made was consummated on November 23, almost two weeks before I knew I was to judge at Chicago. So much for that part of the transaction. I was, perhaps, unfortunate in getting mixed up in the trouble between Mr. Hallock and the White Wyandotte Club.

Mr. Ambrosius appears to have been a staunch and loyal supporter of Mr. Hallock, and after I advised Mr. Rankin not to send the books to the Cleveland meeting I received a letter from Mr. Ambrosius under date of May 8, 1908, demanding to know my reason for wiring Mr. Rankin not to send the books to the Cleveland meeting. Mr. Ambrosius was a member of the executive committee at that time and was very indignant that I had ignored him as a member of that committee. Mr. Ambrosius' animus towards me was so manifest that both Mr. Maurice F. Delano, the manager of the Owen Farm, and Mr. Grant M. Curtis testified that he was very bitter towards me. Mr. Delano also testified that Mr. Ambrosius had a talk with him about me about 1 or 2 o'clock in the morning. In a letter written by Mr. Ambrosius to Mr. Cleveland, dated December 10, 1908, he said that I had not given him a prize on a disqualified bird and that it was not true that I had, and that neither Mr. Cleveland nor anybody else heard him say that I had, and that Mr. Cleveland must have misunderstood him at Niagara Falls.

Mr. Doak, a member of the executive committee, in his very elaborate memorandum filed with his vote, stated that as to the question of my awarding a prize to a disqualified bird, there was not a scintilla of evidence, much less of proof, to show that I had awarded a prize to a disqualified bird. While I had proved by Mr. Sandy and myself that I had not, and that the testimony produced by me was absolutely uncontradicted.

Nothing which bears the semblance of proof against me of the charge that I gave a disqualified bird a prize at Chicago was produced at the hearing at Madison Square Garden on December 31, 1908, and I say now that I did not give the stubbed cockerel a place at Chicago. At the hearing of the executive committee, which was held before Mr. Cleveland and Mr. F. S. Hawn, I asked if Mr. Delano was a member of the executive committee, as he was present at the hearing, and Mr. Cleveland stated that he had asked him to sit with us as one of the officers. At the hearing I was refused the right to have my counsel present and after the two letters of October 27 and December 26, written by me, were read by Mr. Cleveland he desired me to make a statement on the first charge and on all the charges, so that instead of being given the benefit of the presumption of innocence Mr. Cleveland spoke about in his letter of October 10, 1908, published in the November Reliable Poultry Journal, after the writing of the two letters heretofore described, Mr. Cleveland made it obligatory upon me to answer the charges, when as there was no evidence that the sale was consummated after I had been appointed to judge at Chicago, and no evidence that I had given a disqualified bird a place, so that the proceeding may be termed an unusual one if nothing more.

After the hearing at Madison Square

Garden the testimony was written out and sent to the different members of the executive committee I subsequently received from Mr. C. L. Doak, a member of the executive committee, a memorandum with his vote, in which he states at the very outset that no influence was brought to bear upon him in favor of the defendants, although he had some pressure brought to bear upon him inferentially to influence a decision against them. He stated in regard to myself, the burden is upon the people making charges to prove them, and that the charges had not been established in any way, and that even if Ambrosius had been present and testified before his testimony could be received against me it would have to be corroborated. Mr. Doak voted against my expulsion from the club, believing, however, that I had committed an indiscretion in judging at a show where birds I had sold were competing, he recommended that I be censured. I received the vote of Mr. John S. Martin, of Port Dover, Canada, in which he states that he voted in my favor, and that his stand in the matter was "that it was no worse to pull a stub than to pull a black feather, and everyone does that and thinks nothing of it. Then why is it such an awful thing?" Afterwards I received a letter from Mr. Cleveland, dated May 3, 1909, in which he stated that I had been censured for selling birds after I had received official notification of my appointment to judge at the Chicago show. With the votes and reasons of Mr. Doak and Mr. Martin before me, I immediately wrote to Mr. Cleveland, asked him to give me the vote of the members of the committee upon the motion to expel, and also what report or finding they had made to Mr. Cleveland; then wrote my attorneys, forwarding them a report to be delivered to the poultry press by him, and also refused to give the information asked for by me, saying "the information asked for cannot be given, as these matters are for the committee and not for the members." Subsequently, in a letter dated May 27, written my attorneys, he states: "I enclose a copy of my report on the action taken by the executive committee. This, I think, will give to Mr. Graves all the information which he is entitled to or should desire, and I trust that the matter will now be marked 'Incident closed.'" The report merely states that I had been censured for my part of the transaction. Either Mr. Cleveland, Mr. Hawn and Mr. Hume, the other members of the executive committee, are unwilling to allow me to know what their vote was in the matter, or they intend to treat their action as that of a star chamber tribunal. I think I am at least entitled to know by what vote I was censured, if I was censured.

The action of Mr. Cleveland, as president of the executive committee, from a sportsmanlike point of view, is not to be compared with the frank, open and fair manner in which Mr. Doak and Mr. Martin both expressed what they believed to be their conclusion of the transaction. Mr. Cleveland would give out a report to the poultry world, from a reading of which report a person not knowing what the evidence was would reach the conclusion that the charges against me had been established, while, as a matter of fact, none of the charges against me have been established.

Mr. Doak says I have especially disproved them. Mr. Martin said he voted

in my favor. By what vote was this judgment of censure passed? Am I to take the word of Mr. Cleveland that such a vote of censure was passed?

I believe I have fairly stated this transaction, and all that I have said here is susceptible of proof. I believe I am entitled to the vote of the members of the executive committee, and I should like also to know from Mr. Doak to whom he refers when at the beginning of his memorandum he says: "I have had some pressure brought to bear upon me inferentially to influence a decision against them." (Meaning Mr. Ambrosius and myself.) If Mr. Doak would make public who those parties are the poultry world might be able to determine who are interested in ruining the reputation and business of the undersigned.

I desire to thank you for the space I have taken in your valued publication, and regret very much of the necessity of its use, but I believe a complete statement of the transaction should be placed before the poultry world, and not merely the conclusion of the executive committee.

A LATE POULTRY ORGANIZATION.

One of the late associations that bids fair to be a lasting and prosperous organization, is the Womelsdorf Poultry, Pigeon and Pet Stock Association at Womelsdorf, Pa. A preliminary meeting was called by several poultry enthusiasts on November 4, 1908, at which meeting an organization was effected, twelve members enrolled, and the following officers elected: M. S. Weidman, president; W. A. Ruth, vice-president; Charles D. Leinbach, secretary; Irwin W. Althouse, treasurer.

A constitution and by-laws were prepared and adopted at a subsequent meeting. The constitution states that "the object of the association is to promote interest in the breeding of poultry, pigeons and pet stock for the purpose of holding annual exhibitions; to discuss questions pertaining to standard bred poultry, pigeons and pet stock, and put forth such effort for the general advancement of these interests in Womelsdorf and community as may be deemed proper."

The association now consists of sixty-two members, and arrangements are already being made for holding its first exhibition, the date of which has been set for November 30 to December 4, inclusive.

This town had a limited number of amateur poultrymen, and it is surprising to see what interest has already been created by the association and how many additions to the poultry ranks have been made. The best harmony and good feeling prevails, and it is interesting to see the many breeders on a touring inspection to various back yards. It is apparent that they are all breeding for quality, trying to outclass each other at next fall's exhibitions. Principally among the breeds we find the Wyandottes, Leghorns, Rocks, Orpingtons, Rhode Island Reds, Hamburgs, Polish, Bantams and Flying Homer Pigeons.

Mr. Sidney J. Weidler, one of our most ardent and best-informed members, has removed from our town to Oklahoma, and while we sincerely regret his removal, he has our best wishes for his future welfare and prosperity.

This association was represented at the meeting called for a proposed state organization, at Harrisburg, Monday, March 22.

TOLEDO, OHIO.

The Tri-State Poultry and Pet Stock Club, of Toledo, Ohio, has reorganized their club with the following officers in charge: President, Andy Smith; vice president, G. J. Cloud; secretary, Frank W. Hoff; treasurer, Wm. Parker.

George Felt, the well known poultry fancier, as superintendent of the show which will be held the last week of January, 1910, from the 24th to the 30th, with Sharp Butterfield and J. W. Mahins as judges for the show; with this enthused body of officers and the

able judges this club has secured, the fancier can be assured of one of the best shows Toledo has ever had.

This association has affiliated itself with the A. P. A. and its members are composed of some of the strongest specialty clubs, and they will not leave anything undone to have a big meet of the clubs at their show.

We are pleased to know that this club is making a hard pull to land the next convention of the A. P. A. in their city, which has become one of the strongest convention cities of the country. They assure the poultry fraternity the greatest time of their lives when they visit their city and we admire the pluck and courage of this club to go after all that is great and good for their industry.

"SKEDADDLE TO SCHENECTADY."

The above slogan was adopted by the Board of Trade of Schenectady, N. Y., to advertise the busiest, healthiest and most prosperous city in New York state.

The Electric City Poultry and Pet Stock Association of this thriving city will hold their ninth annual show December 14 to 18, 1909, and extends to their brother fanciers an invitation to "Skedaddle to Schenectady" with their best birds and be with us during our show.

The Schenectady show is one of the most prominent shows held in the state of New York, and numbers among its exhibitors the largest and best breeders in the country, and to win the blue ribbon at Schenectady you must show something that is first class and good enough to win anywhere.

In the number of entries our show compares very favorably with the largest. We have from fifteen to eighteen hundred birds on exhibition; the classes in the popular varieties are always large and competition very strong.

Drop a line to the secretary, I. L. Whitmyre, who will be pleased to send you a premium list about November 1, 1909.

ROCHESTER, N. Y.

The Genesee Valley Poultry and Pigeon Association has elected the following officers: W. J. Gram, president; Arthur C. Shilling, vice president; H. F. Hildebrandt, treasurer; R. H. Pringle, recording secretary; F. A. Newman, secretary; C. W. Augenstein, superintendent.

The great Rochester show is rapidly forging to the front rank and is becoming one of the most important shows of the country. The association is determined that their coming exhibition, to be held January 10-16, 1910, at Rochester, N. Y., shall by far overshadow their last show, which was the most successful ever held in this state outside New York city. The following judges of well known reputation will officiate: Geo. W. Webb, W. C. Denny,

M. S. Gardner, W. J. Stanton, Edw. D. Cornish, Fred Maunder.

Any information will be cheerfully furnished by the secretary, F. A. Newman, Box 472, Rochester, N. Y.

ELECTRIC CITY POULTRY ASSOCIATION.

The Old Reliable Electric City Poultry and Pet Stock Association (Incorporated), of Schenectady, N. Y., is still in the ring and doing business at the old stand.

The association is composed of men who are thoroughly interested in the welfare and advancement of poultry culture, and who not only give their time but their financial support as well to further the good cause. At the annual meeting held in April the following officers were elected for the ensuing year: President, Dr. A. T. Sitterly; vice-president, George Van Derveer; secretary, I. L. Whitmyre; treasurer, William F. Smith; superintendent, John D. Jaquins. December 14 to 18 were selected for their 1909 show.

PORTLAND, ORE.

The annual show of the Oregon State Poultry Association will be held at Portland, December 8-15, 1909. By a practically unanimous vote it was decided to have the show judged by comparison. This association holds one of the best shows on the Pacific coast, and, though they have aimed high, the members will doubtless realize the high ideals they are working to attain, as they are working hard and in harmony for the good of the association as a whole, instead of individual interests, as is frequently the case. J. E. Winde, of Lents, Ore., is secretary. W. C. Denny, of Rochester, N. Y., has been re-engaged as judge.

THE TENNESSEE STATE FAIR SHOW.

The poultry show season in the south for 1909-10 opens with the fourth annual exhibition of the Tennessee State Fair Poultry Show at Nashville, Tenn., September 20-25. This show is conceded by America's leading poultry judges and exhibitors to be one of the greatest shows on the continent. As a market place for fine poultry and eggs the Tennessee State Fair show stands in the lead. Over 3,500 entries last year from over thirty states. The show this year promises to eclipse all former events. For information, premium lists and entry blanks address John A. Murkin, superintendent, Nashville, Tenn.

MEMPHIS, TENN.

Poultry men should support the Tri-State Poultry Association in its efforts to build up the poultry industry in the great south and southwest. The first annual show of the association will be held in connection with the Tri-State Fair in Memphis, Tenn., September 28 to October 9, and a most liberal program of cash premiums and valuable trophies is announced. A handsome new building for the show is to be used. The attendance will run up into the thousands. No better opportunity is offered to dealers in the United States than the Tri-State show. R. C. Stockton is secretary.

NEW LONDON, IOWA.

The New London Poultry Association held its annual meeting Tuesday evening, January 20. The following officers were elected for the coming year: President, D. W. Brown; vice-president, Charles Walker; secretary and treasurer, G. R. Hill; assistant secretary, F. W. Clawson; superintendent, Arthur Cornwell; executive committee, H. C. Clawson and Asa Anderson. Our fifth annual show will be held December 15-18, 1909, with W. S. Russell as judge. The association will spare no effort to make the coming show the best in this part of the state.

READING, PA.

At a meeting of the Reading Poultry and Pigeon Association the following officers were elected to serve for the ensuing year: Edmund B. Ulrich, president; H. C. DeTurk, vice-president; W. Harry Orr, treasurer; C. H. Glase, secretary. The board of directors decided to hold its next show December 7 to 11, inclusive, and the association will make a special effort to have their departments largely represented in the way of entries, and will offer every inducement possible to the exhibitors. Judges to be announced later. C. H. Glase, secretary, Reading, Pa.

ALLENTOWN FAIR.

The great Allentown, Pa., Fair will be held September 21-24, 1909. W. Theo. Wittman, superintendent. Arrangements are now being perfected which insures a greater show than ever before, and it must be remembered that this is one of the big shows of the country. Write to Mr. Wittman, at Allentown, Pa., for particulars.

GALVESTON, IND.

The first annual show of the Galveston Poultry and Pet Stock Association was a very encouraging success. The association will hold its second annual show December 20-25, 1909, with Mr. S. B. Johnston as judge. For further information address the secretary, Harry Gray, R. 13, Galveston, Ind.

OAKLAND, CAL.

The Alameda County California Poultry Association will hold its next annual show at Oakland, November 22-27, 1909. W. C. Denny, of Rochester, N. Y., has been engaged as judge. Mr. A. Norton is assistant secretary.

MERIDIAN, MISS.

The annual exhibition of the Meridian Poultry and Pet Stock Association will be held December 13-18, 1909. F. J. Marshall, judge. Fred Roy Ziller, secretary.

ELMORE, OHIO.

The Elmore Poultry Association will hold its third annual exhibition December 28-31, 1909. J. C. Long, judge. Geo. A. Weis, secretary.

HOWELL, MICH.

The Livingston County Poultry and Pet Stock Association will hold its second annual show January 18-22, 1910. G. P. Henry, secretary.

APOLLO, PA.

No part of the United States is better adapted to raise chickens than the territory around Memphis, but so long as cotton was king the farmers paid no attention to poultry. However, the boll weevil and other troubles have caused the land owners to go back on cotton, and in the future there will be less cotton and more chickens raised in this part of the country. The Tri-State Poultry Association, an organization composed of persons living in Tennessee, Arkansas, Mississippi, Alabama, Georgia and Louisiana, will hold its first annual show in connection with the Tri-State Fair at Memphis, Tenn., September 28 to October 9, inclusive. The largest cash premiums and the most valuable trophies ever offered by a "first show" are announced, and it will be the object of the managers to have classes for every kind of chicken that is worth raising. The beginners are going to be encouraged, too, as it is on these people that the South's prominence as a poultry section in the future will depend. Special classes with adequate premiums will be offered. The association will have incubator contests and other demonstrations so as to familiarize the people with the practical side of the business. R. C. Stockton is the secretary.

TO THE MEMBERS OF THE NATIONAL ROSE COMB WHITE LEGHORN CLUB.

Attention is called to all members in regard to issuing our annual club catalogue. The club is growing and prospects for a greater club are grand, hence we should do all that is possible to make this catalogue one of the best that the club has ever got out before by assisting me in write-ups or articles on different subjects pertaining to the good qualities of our noble breed, and subscribe for advertising space so the breeders may know your winnings, with grand illustration or cuts of your choice birds that took the blue or red ribbon at some poultry show. So, members, I desire your support in this line. In regard to breeders who are not members and wish to become members, they now have the best opportunity of joining, for the membership fee is but \$1. Silver cups and grand club badges will be offered at the best shows in all states, and if Iowa wants a silver cup kindly correspond with me and learn how the state of Iowa can get one. So join the club for better and more R. C.

W. Leghorns. Send for application blanks. Respectfully yours,
J. J. Peters, Secretary,
Lincoln, Ill.
George Griesmeyer, President,
Cragin, Ill.

R. I. RED BREEDERS OF NEW YORK STATE, ATTENTION.

The New York State Branch of the R. I. Red Club of America extends an appeal to all breeders of the state to send an exhibit to the State Fair at Syracuse in September.

We expect to turn out the largest exhibit of R. I. Reds ever shown in this country, and as an education to all breeders it will be worth traveling miles to see.

We will offer two silver cups worth \$10 each, to be competed for by club members only, one for the best shaped male and the other for the best colored male, either rose or single comb. In addition to this the fair will offer a beautiful silver cup valued at \$25, open competition. These specials should be sufficient to induce every breeder of Reds to send an exhibit.

The branch has arranged to have a booth in the poultry building where they will be pleased to meet all Red breeders, and talk over matters of interest to the breed and club. A meeting of the branch members will be held on Thursday, on the fair grounds, notice will be given at the booth in what building the meeting will be held. If you are not a member of the club you should join at once, so as to be able to compete for the silver cups.

For information write the secretary, H. L. Greene, Sherburne, N. Y.

ADVANTAGES OF THE AMERICAN BUFF LEGHORN CLUB.

The scientific breeding of Single Comb Buff Leghorns merits the attention of the most skilled fancier.

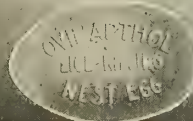

The peculiarities of this breed and their splendid development under proper care and attention render the Buff Leghorn most attractive from the fanciers' standpoint.

On the other hand, the distinctly business breeder finds Single Comb Buff Leghorns by far the most profitable variety—and this when judged solely as "producers," without regard to quality.

These facts are of especial interest because they evidence that the American Buff Leghorn Club is, in the nature of things, a thoroughly broad-gage organization, and one that will benefit any breeder of Buff Leghorns far beyond the small cost of membership.

Through the club's literature, members are constantly learning new points of interest in the breed as brought out

REPORT OF THE EXECUTIVE COMMITTEE OF THE NATIONAL WHITE WYANDOTTE CLUB.

West Orange, N. J., May 3, 1909.

To the Members of the National White Wyandotte Club:

The executive committee, consisting of Messrs. Cleveland, Hawn, Martin, Doak and Hume, to which committee the charges filed against W. R. Graves,

J. H. McDANELL.

Proprietor Old Holmstead Farms, Warsaw, Ky.

of Southboro, Mass., and Theodore Ambrosius, of Collinsville, Ill., were submitted, reports that it has read and digested all of the testimony and the exhibits attached thereto, and that the vote of the committee upon said charges is as follows:

With reference to W. R. Graves—The committee voted to censure him for his connection with the transactions referred to in the charges.

With reference to Theodore Ambrosius—The committee voted to suspend him from the club for a period of two years.

Respectfully submitted,
Charles D. Cleveland, Chairman.

AMERICAN BLACK MINORCA CLUB.

The fourteenth annual meeting of the American Black Minorca Club was held at Tacoma, Wash., January 8, 1909. The club's exhibit was one of the largest and best held anywhere during the winter. It consisted of seven cocks, thirteen cockerels, twenty-nine pullets, twenty-seven hens and seven pens of Single Comb Black Minorcas. I believe I have never handled a class of Black

Minorcas in any show which averaged as well as this class in plumage color, and judging from the size of the birds exhibited, I think there was not one among the exhibitors who would be willing to have the weights of Minorcas lowered. It was an advantage to the club to meet at Tacoma, and from what I heard Minorca breeders say, while in Washington, Oregon and California, I think we may expect a good string of Minorcas from there to compete at our club meeting next year at some Eastern or Mid-West show on which we may decide.

Sixty-one new members were taken into the club at the meeting, making in all 146 members who have joined since our annual meeting of 1908. Officers for the ensuing year were elected unanimously as follows: Seth W. Geer, Tacoma, Wash., president; T. M. Harkness, Ashland, Ohio, vice-president; George H. Northup, Raceville, N. Y., secretary-treasurer; Frank McGrann, Lancaster, Pa.; Dr. R. W. Baker, St. Louis, Mo.; W. F. Lindenberg, Fort Wayne, Ind.; O. H. Wilson, Denver, Colo., directors.

The meeting was a great success. It was harmonious from start to finish, without a word of unpleasantness or disagreement. Everyone present seemed interested to do his part. All appreciated having the meeting held in the West and pledged their best efforts to increase the membership in that section.

Mr. Seth Geer, the newly-elected president, is a hustler and is enthusiastic in Minorca club work. He sets his task to get 100 members for the club from the Pacific states this year. Eastern members ought to add 200 and Mid-West members should add as many. If every member will make an earnest effort to secure one or two, this can easily be accomplished, and it will mean a silver cup for every state instead of the eight which were offered and won this winter. Remember, the more members we have the better prizes we can give, and every member for the club and every prize offered by the club makes more business in Minorcas, of which each can have his share. Notice how much greater the demand for Minorcas is now than it was when the club had only from sixty to eighty members, gave only one or two state cups and no other prizes outside the annual meeting.

We are now issuing a new catalogue of the club which will be the finest the club has ever issued. We would like, before going to press with the last forms of the catalogue, to enroll in our list of members every breeder of Single Comb Black Minorcas, who is sufficiently interested in the breed to try to improve them, and who will avoid all dishonest practices in business and in the show room. Two dollars sent now pays initiation fees and dues to July, 1910. Send for application blank and particulars to George H. Northup, secretary-treasurer, Raceville, N. Y.

AMERICAN ORPINGTON CLUB.

I am glad to state that the American Orpington Club is in very good shape now. The club has 168 active members who all take great interest in the welfare of the club; 106 members were lately dropped for non-payment of dues. Almost daily I receive requests for application blanks, catalogues, etc.

At the meeting of the executive com-

Another Infringer Nailed

SHARPLES SEPARATOR CO.

John Deere Plow Co. and Deere & Webber Co.

Sued For Infringement Of DE LAVAL DISC Cream Separator Patents

For the information and caution of all whom it may concern announcement is made that THE DE LAVAL SEPARATOR CO. has brought suit in the UNITED STATES CIRCUIT COURT against the SHARPLES SEPARATOR CO. for infringement of LETTERS PATENT NO. 743,428 by the manufacture and sale of cream separators containing DISC bowl construction covered by the claims of said letters patent.

And that similar suits have been or will be filed as quickly as possible against the JOHN DEERE PLOW CO. and the DEERE & WEBBER CO., who are jobbing such infringing SHARPLES separators to dealers in the Western States.

Attention is pertinently called in this connection to the recent hypocritical advertising tirade of the SHARPLES concern against DISC separators. We have known for some time that they were getting ready to bring out a DISC machine and thus moving up in line with more modern DE LAVAL imitators and would-be competitors. We have but now, however, been able to obtain one of these new DISC machines and the necessary evidence of infringement. The facts speak for themselves and require no further comment.

In addition to the above suits the DE LAVAL COMPANY now has infringement suits pending against the STANDARD, IOWA, PEERLESS and CLEVELAND Separator Companies and the Wm. Galloway Co., all covering the manufacture or sale of INFRINGING DISC SEPARATORS, which infringement applies equally to machines being made by different ones of these manufacturers and sold under their own and various other names by several "mail order" and other concerns, as well as to EVERY USER of any such infringing separator bought of any of these parties.

To avoid any possible misunderstanding and dispel the pretense of some of these concerns that their machines are similar to the DE LAVAL it is proper that we should add that none of the patents sued upon involves the DE LAVAL "SPLITWING" FEEDING DEVICE or its combination with the IMPROVED DISC construction utilized in the up-to-date DE LAVAL separators and that none of the machines is in any degree equal in efficiency, all-around practicability and durability to the IMPROVED DE LAVAL machines of today.

We have for years patiently stood the appropriation by would-be competitors of abandoned, discarded or patent expired DE LAVAL inventions and types of separator construction, but have now determined to put a stop to the more brazen utilization of LIVE patents.

There are STILL OTHER infringers of DE LAVAL patents who will be held accountable in due course.

mittee of the American Orpington Club which was recently held at the Union Square Hotel, at New York City, it was decided to offer fifteen handsome special prize ribbons to any show in the United

States or Canada. The prospective winner must be, of course, a member of the American Orpington Club. The club also donate silver cups at the Boston, New York, Johnstown, N. Y., Philadel-

phia, Cleveland, Indianapolis, Chicago and Kansas City shows. The president, Mr. R. N. Barnum, of the Foxhurst Farm, Lime Rock, Conn., also offers silver cups for the best pen, no discrimination as to color, at the Boston, New York, Philadelphia, Chicago, Cleveland and Indianapolis shows. The secretary of the American Orpington Club, Dr. Paul Kyle, gives silver cups for the best pen at the Paterson, N. J.; Richmond Hill, L. I., and Greater Nashville, Tenn., shows.

I will be glad to receive some more donations from members of the American Orpington Club. I will also be grateful to any member of the American Orpington Club advising me of the address of his nearest secretary, to whom I will mail special prize ribbons. Any suggestion made by a member of the American Orpington Club will be thankfully received and will be brought to the attention of the executive committee for their careful consideration.

Paul Kyle, Secretary.

BUFF ORPINGTON BREEDERS, ATTENTION.

The National S. C. Buff Orpington Club is now the largest and strongest specialty club in the world, and has on its membership roll every breeder of note.

Last year the club met with the greatest of success, in giving five large branch shows; and intends to continue this policy the coming season. These shows are held in the following sections: Eastern, Central, Mid-West, Western and Southern, and comprise all the states and territories of both the United States and Canada. These shows are selected by a vote of the members in each section, and any show making a suitable offer has the privilege of being placed on the election ballot. The show receiving the largest number of votes secures the big meet.

Each of the members are urged to send the name of some show you are interested in, with the secretary's name, and the secretary of your club will, in return, correspond with these associations and later leave the matter to the final vote.

Mr. M. M. Baker, of Peoria, Ill., was the fortunate winner of the Judge's \$50 Silver Cup. This was offered and awarded by Judge Stanfield. Besides this, the club offers over fifty cups, running in value from \$10 to \$25, which are open for competition to club members only.

The club still has a large number of the 1909 catalogues left, and while they last will be sent prepaid to anyone interested in Bufts for 10 cents a copy. Address Will H. Schadt, secretary, Goshen, Ind.

BLACK ORPINGTON BREEDERS—NOTICE!

A good many show and state fair secretaries have written regarding the Black Orpington Club cups and medals to be offered at these shows and fairs. The club offers to show and fair secretaries who will announce in their catalogues the following:

Cups will be offered any show where ten or more members compete.

National and state club cups will be offered in such shows as are voted for by the greatest number of new members and by old members who have sent in at least one new member, and

Poultry Farms For Sale

HERE ARE SOME BARGAINS

**No doubt you can find just what you are looking for
Write us for further information**

No. 1. 120-acre poultry farm, 1½ from R. R. station. Located in New York state, 75 miles from New York City. Half in cultivation, balance in timber. Ideal southern slope; drains well; limestone and kiln on place; trout stream through place; also springs; stream and boating close at hand. Good water; very healthy. Doing a fine poultry business, more than making a living. Could have sold 2,000 more birds this year. Customers all over U. S. and foreign countries. Good 12-room house, two barns, poultry house 10x50 one 12x15, five 7x12, one 6x6, all new. Lots of fruit of all kinds. Produces good crops. Will include personal property, household furniture, including \$375 piano, etc., etc. Stock consists of 225 old birds, W. Leghorns and B. Rocks; 1,200 youngsters; 1 horse, 1 cow, several harnesses, 2 wagons, 2 sleighs, farm tools, 3 large incubators, 12 brooders, etc. Place would keep 20 cows; creamery near; butter worth 32c. Could get all the summer boarders desired. Price, \$6,500, half cash. A great opportunity for someone.

No. 2. Located in the beautiful west. 142½ acres, located in Idaho on the beautiful Coeur d'Alene lake. Fine gravel beach of one-half mile. Lake 26 miles long, 4 miles wide. Fine fishing and hunting. Fine for summer resort. Living springs; easy to irrigate. Timber very valuable. Elegant local markets. Eggs in winter bring 55 to 60 cents and never less than 25 cents, and in the mines have brought \$1.10 per dozen. Plant will accommodate 10,000 chicks. House, barn, poultry 20x30, with 12x12 colony houses, etc. Mild winters. Turkeys do well and average 28c per pound. Grand opportunity here to make money in the commercial poultry business and in summer boarders and hunting and fishing parties. Price \$5,000, one-half cash, balance on time. Owner is an old man. Write us for further information.

No. 3. Located in the Sunny South in northern Georgia; in fertile valley, at foot of the Blue Ridge mountains. For sale or rent. Dairy and poultry farm. One mile to depot; 100 acres; 35 acres in cultivation, balance in pastures; all well watered; one mile to depot. Land is partly rolling; south slope for poultry yards; new dwelling, 7 rooms, 2 halls, veranda almost entirely around the house; barn, 30x40, and 10-foot shed entire length of barn. Tenant house. Good young apple orchard, peaches and pears. Has poultry house with 10 pens and two other small houses; small incubator cellar; brooder house with four double indoor brooders. Near good market. Commercial and fancy poultry. Rural route. Iron has been discovered near this property; iron mines being worked ten miles distant. Price, \$5,500. If you dislike the cold winters, better consider this property.

No. 4. Located on the Pacific coast, near Seattle, Wash., in the great fruit belt. Five acres, nearly level, all cleared and fenced; 100 apple, 140 cherry, 30 pear trees; 700 gooseberry, 500 currant, 300 berry bushes; 500 strawberry plants and lots of other fruit. New land, very fertile. Small house, barn, one 24x60 and four 8x10 chicken houses; 3½ miles to Seattle; macadam road; ½ mile to electric car; telephone line along the road; 500 chickens, team and

all farming tools, furniture, etc., go with the place. Best prices for everything. Average price of eggs sold at the door, 35c per dozen; 1½-pound broilers, 60c. Reason for selling, owner too old to handle it. Price \$8,000, half cash. This is a fine fruit and poultry farm and a fine, healthy location.

No. 5. Illinois farm, in high state of cultivation; 20.69 acres. Buildings only two years old. Good soil, fine drainage; one mile to town. Rural route; good roads. Telephone. Five-room house, cellar; barn, 18x28; good water; fine orchard; farm well fenced; hen house, 9x24 and 8x8. Price, with crops, \$3,000; without crops, \$2,500. This is an opportunity for a man of small means.

No. 6. A fine poultry farm of 35 acres down in Missouri. 15 acres cultivated land, 18 woods pasture; ¾ sandy soil, ¼ deep second bottom land. Orchard, 150 bearing apple, 50 young cherry, 35 peach, 15 plum trees; 100 gooseberries; 6-room house; 2-story barn; curtain front hen house, 12x56, 4 pens; 16x30, 2 pens, 50-foot yards; 1 acre blue grass range; 8 colony houses; brooder house, 8x12. Located outside corporation line; 5 blocks of electric railway. Good local market; 100 miles from Kansas City. Price \$3,500, half cash.

No. 7. Fine house and poultry yard, consisting of 2 acres; located on electric R. R.; 60 miles from Cleveland, O. Residence is strictly modern, 9 rooms, bath, slate roof; both kinds of water, hot and cold, in house; furnace heats all rooms; gas and city water in house and barn. Poultry house, 12x72; brooder house, 12x14. Located on paved street, close to depot. Living stream through place. Land is high and well drained. All fenced with poultry fence. Plenty of fruit. S. C. W. Leghorns are kept and eggs bring 3 to 7 cents above market quotations. This is a bargain and is offered cheap for quick sale. Good reasons for selling. Price \$3,500, \$1,500 cash.

No. 8. A Georgia farm, 10 acres; 4-room nearly new cottage; 120 feet veranda; incubator cellar; brooder house, 6x12; 3 runs, 6x14, and one acre fenced in fine mesh netting in fruit trees and clover for chick range; telephone and rural route; good roads. Twenty miles to Atlanta, six miles to station. Fine water; good drainage. Barn, tool house and wagon sheds, 2 hen houses, 8x12 and 12x21. Place well fenced. \$1,800, one-quarter cash.

No. 9. Illinois. 80 acres in the best corn belt in the country. Good new 4-room cottage, closets and pantry; cistern water in house; good cellar; 5 wells; barn, 48x50. Thoroughbred stock on the farm; 100 head of poultry kept at present. Sandy soil; two running streams; 5 acres woods pasture; three miles to station. Price \$10,000, \$2,000 cash.

No. 11. Near Buffalo, N. Y. 1½-acre place. Near railroad and trolley stations. Good 9-room house, cellar; good barn; good water; lots of fruit. Would make a nice little poultry plant. Price, \$2,100.

Also 101¼ acres; 4-room house and barn; plenty of timber; running water. Good local demand at good prices. Good shipping facilities. Price, \$1,500.

We have a fine proposition to offer a competent poultryman and his wife; to go to Missouri to take charge of a small poultry plant. If you would go and you know you can raise chickens, write us

**We have many other places for sale and rent not listed here
If you have a place for sale you had better list it with us : :**

**AMERICAN POULTRY JOURNAL PUB. CO.
358 DEARBORN STREET : : : CHICAGO, ILLINOIS**

each member will have one vote for each new member he sends in.

Medals—100 gold plated medals have been donated to the club by the president and secretary, to be awarded at 100 shows that apply to them—open to members only.

Club dues are \$1 per year, entitling to have name printed in club directory of breeders in good standing, also entitles members to compete for all club diplomas, medals, cups, etc., and entitles to free copy of club catalogue.

Applicants for membership should make application to the national secretary, Milton W. Brown, station L, Cincinnati, Ohio.

BLACK ORPINGTON CLUB MEDALS

One hundred heavily gold plated medals have been presented to the club by the president and secretary of the club to be presented for the coming year by members.

These medals will be sent to the show secretaries complying with conditions of gift.

The club has had a wonderfully prosperous year, doubling in total membership, and all members report greatly increased demand for eggs and birds. The secretary has reports of several egg farms that have recently been stocked with Black Orpingtons in place of Mediterranean fowls owing to the desire for winter eggs.

The club catalogue is nearly sold out, only 500 now remaining, and these will be sold while they last at 10 cents each. The catalogues tell more about the breed than any catalogue of the kind ever published and the entire edition has been sold except the 500 now remaining.

All club dues should be sent at once to the secretary, Milton W. Brown, Station L, Cincinnati, Ohio.

WHITE PLYMOUTH ROCK CLUB NOTICE.

The two prize cockerels offered by our president, Maurice F. Delano, for the largest lists of new members before February 1, 1909, were won by Messrs. Chas. H. Ring and J. F. Bruns respectively, with L. C. Bonfoey a close third. The winners are to be congratulated, as the prizes are well worth the trouble

taken to secure the new members, aside from the good done the club by this addition.

The club owes a vote of thanks to our president for offering this incentive, and in behalf of the members I take this opportunity to extend the same to Mr. Delano.

Chas. H. Ward,
Secretary-Treasurer.

NOTICE TO ALL ROSE COMB BREEDERS.

The International Rose Comb Rhode Island Red Club will hold its annual meeting and election of officers for 1910, at Springfield, Ill., during the State Fair. This meeting will be called at 10 o'clock sharp, Tuesday morning, October 5. All who are interested in this breed should meet at the Poultry building and attend both meetings and the School of Instruction.

Tom J. Ridge,
Secretary-Treasurer.

Cedar Rapids, Iowa.

NOTICE.

To members of the National Single Comb Rhode Island Red Club. The annual meeting and election of officers for 1910, of the above club will be held at the Poultry Department, State Fair Grounds, Springfield, Ill., Monday, October 4, 1909, at 8 o'clock p. m. All who can do so should attend the School of Instruction and both meetings.

By order of the executive committee,
J. H. Valliere, Secretary.
Cedar Rapids, Iowa.

ROSE COMB WHITE MINORCA BREEDERS TAKE NOTICE.

The National Rose Comb White Minorca Club is open for membership. Send \$1 to the secretary and join. Suggestions for club emblem will be considered. Write Fred Alger, secretary and treasurer, Waukau, Wis.

BLACK LANGSHAN CLUB CATALOGUE.

The National Black Langshan Club of America announces that its annual catalogue is now ready for distribution and will be mailed to anyone who requests it. Send for a copy to the secretary, M. S. Barker, Thorntown, Ind.

R. I. RED SCHOOL.

The Rhode Island Red School given by the National Single Comb and the International Rose Comb Clubs, will be held again at Springfield, Ill., in connection with the State Fair, at 10 a. m., October 4, 1909. All Rhode Island Red breeders are invited to join the club and attend this school. No further cost to attend the school. Be with us.

By order of committee,
J. H. Valliere, Chairman.

BROWN LEGHORN CLUB CATALOGUE.

The 1909 catalogue of the American Single Comb Brown Leghorn Club is now ready for distribution and will be mailed to all Brown Leghorn breeders who request it. Address the secretary, E. W. Staebler, West Park, Ohio.

GALVANIZED

RUST

PROOF

IRON

The Best Roofing Manufactured!

Requires no painting. Economical and easy to put on; no previous experience necessary. Absolutely guaranteed; brand new, clean stock. Bright as a dollar. Sheets are full size. Comes in Corrugated, "V" Crimped, Standing Seam or Plain Flat Sheets. Heavily galvanized on both sides with the most approved galvanizing material; preparation will adhere forever. "Galvanized" means that the iron has been coated with liquid Zinc, which makes it absolutely rust and weather-proof; not affected by heat or cold. Makes buildings warmer in Winter and cooler in Summer. Drains perfectly and does not soak. Does not taint rain water. Fire and lightning-proof. Makes your insurance cheaper. Sold direct from our own roofing factory—the largest in the world. Chicago House Wrecking Co. sells more roofing material than any other concern. We sell thousands of squares of "Galvanized Rust-Proof Iron" every week. Used in all climates. For every kind of building.

PAINTED STEEL ROOFING AT \$1.25 PER HUNDRED SQUARE FEET!

Also in stock, a full line of painted Steel and Iron Roofing, Siding and Ceiling, all styles at prices from \$1.25 sq. foot up. Fill in the coupon below. We will send you samples free of charge together with a vast amount of roofing information.

Roofing Supplies of Every Kind!

Send for our 500 page Catalog No. 186.

It is full of information for the shrewd, careful and economical buyer. Lists thousands upon thousands of rare bargains. Price offers which command orders. Millions of dollars worth of merchandise, bought at Sheriff's, Receivers' and other forced sales, are plainly described in this book. SEND FOR IT.

QUESTIONS AND ANSWERS

Questions will be answered in this department only when full name and address is signed by the writer.

Question.—(1) How large should a poultry house be to accommodate 500 hens? Give dimensions for building. (2) Estimate daily average cost of feeding 500 hens where they have unlimited range.

O. E. S.
McKinney, Texas.

Answer.—(1) A building to accommodate 500 hens should contain 3,000 square feet of floor space. See our book, "How to Build Poultry Houses," for plans and specifications. (2) At the present high price of feed it will cost between \$2 and \$2.50 per day to feed 500 laying hens.

Question.—(1) How many hens will a floor space 5x6 accommodate? (2)

Question.—Can you tell me why so many of my chicks die in the shell? I attend to them as follows: I sprinkle them when I first put them in the incubator, then I sprinkle them again the twelfth or fourteenth day and every day during the last two or three days if there is not any steam on the door glass then I set a pail of boiling water under it so the steam can enter the egg chamber, and I am not bothered with the rheumatism. I run it 102 degrees first week, 103 degrees second week and 104 degrees third week. They are all good and strong that hatch; there are one-quarter, more or less, that don't hatch, but they are full-formed in the shell. I let the little chicks on the

eggs each, being careful of having hens and nests thoroughly dusted with lice powder at all times; the best I could do was to get about thirty-five chicks hatched. Have chickens that laid eggs been confined too much? Have outside run 7x14 feet for each pen of four chickens, or is it cause of feed? Eggs not being over six days old when set. Have set hens in boxes on earth; elevated some nests, but eggs run about five unfertile to a setting; some died in shell. (3) Have a neighbor hatching chickens with an incubator obtains from 60 to 80 per cent in hatches, after being put into brooders loses 40 per cent or more. As soon as chicks are well dried he puts them in brooders, doesn't feed anything until sixty hours old, gives water with Germazone and grit and feeds Commercial Chick Feed, also dry mash; after a few days chicks become droopy and begin to die off, some don't eat, others getting gapey; keeps brooder thoroughly free from lice. Is it the fault of weak parent stock, or faulty incubator hatching or brooder heating? Chicks have outside run in pleasant weather, or is weather, which

FIRST PRIZE PEN S-C-W ORPINGTONS AT MADISON SQ. GARDEN 1908-9.
Wm. COOK & SONS SCOTCH PLAINS N. J.
OWNERS AND BREEDERS.

How many will a floor space 10x12 accommodate. (3) How many hens will two perches 6 feet long accommodate. (4) How many hens will three perches 6 feet long accommodate? A. M. C.

Caswell, Ala.

Answer.—(1) Half a dozen. (2) Twenty. (3) Eighteen. (4) Twenty-four.

Question.—I had a White Leghorn hen which two weeks ago began to get lame and in a few days could hardly get around at all; got poorer every day; would hardly eat anything and to put her out of misery I killed her; found a lump the size of a hen's egg under the left wing above the leg, which on cutting open revealed a fairly hard, yellow, spongy growth. Have you any idea what this was? F. F. L.

Erie, Pa.

Answer.—Evidently a tumor, resulting from an injury.

egg tray while they hatch and by crawling around they move the egg. I air them ten minutes twice a day the last two weeks and cool them. I set a pan of water under the egg tray all the time.

Panther, Pa.

B. S. B.

Answer.—We know of no reason why you should sprinkle the eggs, and this probably is why so many die in the shell. If the eggs require moisture put a pan of warm water in the egg chamber, but you can determine this by testing the eggs, and they certainly do not need moisture when you first put them in the machine, and usually do not require any before the fourteenth or fifteenth day, and frequently not at all.

Question.—(1) Have several hens that lay soft-shelled eggs occasionally. I feed scratch feed, corn, oyster shell, grit and table scraps, with a little meat on and off. What causes the above? (2) Have set eleven hens with thirteen

has been rather cold, wet and chilly this year, the cause? W. E.

Hamilton, Ohio.

P. S.: I have had chickens of all varieties in past; have hatched chicks in past, but never saw such poor results in hatching as this year. W. E.

Answer.—(1) The laying of soft-shell eggs is due to two causes: lack of shell-making material and inflammation of the shell-forming chamber of the oviduct, which no longer secretes calcareous matter. The latter is the trouble in this case. Give plenty of green food and endeavor to stop the hens from laying for a few days, so that the inflammation may be reduced. (2) This may be due to various causes, but we believe you will find the main trouble is with your male birds. (3) This may be a combination of the causes you mention, or it may be due to the brooder entirely. One of the greatest faults in brooding chicks is: Too many

FARM JOURNAL
1308 Race Street, Philadelphia, Pa.

chicks are placed in one brooder. Under no circumstances should more than fifty chicks be put in one brooder, and twenty-five to thirty-five will do better.

Question.—(1) Is there any way of telling a fertile egg without a tester? (2) How to find the air cell in an egg. (3) What is the cause of the yolk of an egg being pale? (4) What is the cause of an egg having no yolk? **D. W. St. Louis, Mo.**

Answer.—(1) No. (2) The air cell is always visible at the large end of the egg. (3) This is usually due to the kind of feed consumed by the fowls. (4) This is the result of two ovarian capsules becoming ruptured at about the same time, and the yolks descending the oviduct so near together that both are included in the same shell.

Question.—What would be the best thing to feed our chickens in order that they will moult very soon and be ready to hatch by September or Octo-

FRANK FOX,
Noted Poultry Breeder, Des Moines, Iowa.

ber? We find chicks taken off at that time do better than any others.

Sayre, Ala. R. R. M.
Answer.—Sunflower seeds are considered one of the best feeds for the moulting period.

Question.—What is the greatest number of eggs laid by a single hen in a single year? **F. M. C. Benson, Neb.**

Answer.—The highest record we have any knowledge of is 287.

Question.—(1) We have this spring been bothered with a strange disease which seems to attack the young chicks of different ages; it makes its appearance by small blisters appearing on the feet and they also become blind and cannot eat. Will you kindly tell what this is, also cure for same? (2) Do you consider sand as good for young chicks as broken dish or something sharper would be? I myself, and others, have been bothered considerably with bowel trouble among them. Do you think that the sand alone would have something to do with it, or do you think it is caused from the food they eat and being chilled, and various other causes? **Idalia, Colo. E. A.**

SPECIAL SALE**

Young Cubans or Red Heads, while they last, \$4.15. Guaranteed to learn to talk. Write for list of other birds.

U. S. BIRD STORE CO., BURLINGTON, IA.

Answer.—(1) This is caused by breeding from diseased stock, or stock that has had roup at some time. (2) Prepared chick grit is considered best. Bowel trouble is most always caused by the chicks getting chilled or by feeding them too soon after they are hatched.

Question.—(1) Is a pen 10x35 large enough for ten to twelve breeders? (2) Will a house 5x10 with scratching shed same size be large enough for each pen? (3) I have an orchard 70x142 feet; how many chickens can I keep with good care? (4) What is a good ration to feed broilers to hurry them along? (5) Will it pay to keep an incubator going all summer hatching chickens for the market? C. O. H.

York, Neb.

Answer.—(1) Yes. (2) Yes. (3) Four to five hundred. (4) We cannot recommend anything that is better than any one of the prepared feeds advertised in these columns. (5) We do not believe this would be found profitable, unless you have an exceptionally good market.

Question.—(1) What is the cause and remedy, if there is one, for little chicks, Brown Leghorns, trying to tear each other to pieces? B. M. R.

Armona, Cal.

Answer.—This is caused by too close confinement and overcrowding.

Question.—(1) What do you consider the best and quickest way to break up setters? (2) Where can I obtain rubber stamps suitable to stamp eggs?

West Hawley, Mass. R. D. P.

Answer.—(1) By confining them in a small, bare inclosure with several male birds. (2) We can supply you with rubber stamps at the rate of 15 cents per line.

Question.—I had a rooster that went lame and finally died. His legs got rough and knotty and a foreign substance formed around his spurs. What was the ailment and what should be used for a cure? E. D. C.

Ottawa, Ohio.

Answer.—From the slight description given we are of the opinion this was scabies. There are several remedies given in Dr. Salmon's book, "Disease of Poultry," but space will not permit us to give them here. Price of this book is only 50 cents, and every poultryman should have a copy, as it is full of valuable information on all diseases of poultry.

Question.—I would like to ask a question to be answered through the American Poultry Journal in regard to the breed of Buckeye Red chickens. I am raising some of this breed and am very fond of them, on account of their beautiful color. And will you please tell me what you think about them, as compared to the White Wyandottes and Rhode Island Reds? And have they been cut out of the Standard of Perfection? J. M. J.

Cabot, Ark.

Answer.—Buckeye Reds are not bred very extensively as yet, and we are not in a position to compare them with the older varieties. They have not been cut out of the Standard.

A little millet sown now will make excellent green food later on.

STANDARD QUESTIONS.

What is the Standard for? Is it doing the work expected of it? We hear so much about Single, Double and even Triple mating to make fowls conform to the Standard that we think either that "nature" or the Standard must be wrong. How would it "work out" to make a Standard for the different birds? Would you make the Standard conform to the birds as nature made them, or would you make a Standard, then make the birds conform to it or disqualify them? How would it work to make a Standard for the different kinds of birds, then take the birds and double and triple mate and see if we would keep them in accordance with the book. This is about what we have done, only we changed the birds first. The fanciers got hold of Barred Rocks, reversed the rules of Mormonism and now we must double mate to make them conform to the Standard. They took the Black Minorca and bred the colors of the peacock (green sheen) into them and the Standard says they must have green sheen. In horticulture they have a white Blackberry, but it is no improvement.

According to George H. Northup's book on Minorcas, it is hard to breed for green sheen without affecting the color of the eggs. As the Minorca was made for an egg machine, and not a "color card," were they improved by breeding for the green? If we take the most useful and beautiful bird on earth and go to breeding for "under-color," will we improve the value or beauty of the bird? If we breed for undercolor on a Barred Rock until the color goes entirely through the skin, will it add to the beauty or usefulness of the bird? Supposing the pullets are darker than the cockerels, is it any detriment to the breed as long as nature made them so? Who would think of taking a female Oriole and try to breed for the beautiful colors of the male? If you should succeed, would you have a better Oriole, or a parrot? How many kinds of chickens when bred to their best, that give the same color and markings in male and female? If the Standard is made to conform to the different breeds when bred to nature, and the best that is in them, it is all right, but if made to conform to fowls after they have been bred and inbred to secure certain shades of color, to the detriment of stamina and number of eggs, it is wrong. If more than ninety-nine in every hundred are keeping chickens for eggs and meat, make the Standard for the natural egg and meat fowl. Don't try to barr Rocks so deep that they will lay "stripped" eggs or breed for tints that will change the color so we cannot distinguish one from the other.

C. E. Goodwin.

Ashtabula, Ohio.

Sunshine is a cheap tonic and disinfectant. Let it sweeten up the ground and coops. Spade up your yards, rake in some grain and let the birds scratch it out.

Better provide that shade for the chicks now. After awhile it will be too hot for you to do it. The chicks won't use it unless they want to.

Remember a few drops of tincture of iron in the drinking water at this time is good for your birds.

Pictures Against Talk

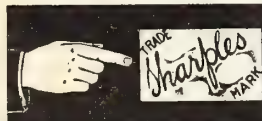

NO matter how complicated his cream separator, every "bucket bowl" manufacturer claims his machine is simplest and easiest to clean. Even the makers of disk machines—with 40 to 60 pieces inside the bowl—make the same claims. Yet none of these "bucket bowl" fellows dare put pictures of their separator bowl parts into their advertisements—they all realize that pictures would make their claims ridiculous.

The Sharples Dairy Tubular Cream Separator is, without exception, the **only** simple, sanitary, easy to clean separator made. We put pictures against "bucket bowl" talk. We frequently show you pictures of the light, simple Dairy Tubular Bowl and of heavy, complicated "bucket bowls." Compare them. They tell the whole story. It will take you less than thirty seconds to put "bucket bowl" claims where they belong.

The self styled "original maker of disk machines" is trying to maintain sales by patent infringement suits against equally cheap machines, that have been made for several years with disks like his. If you want to avoid work, expense and dissatisfaction, get a Sharples Dairy Tubular. Made in the world's biggest and best separator factory. Branch factories in Canada and Germany. Sales greater than most, if not all, "bucket bowl" separators combined. Write for catalog, No. 205.

One pan contains the single little piece used in Sharples Dairy Tubular bowls. The other contains nothing but disks from a single "bucket bowl." Which is simple and easy to clean?

\$185 BUYS COMPLETE HOT WATER HEATING SYSTEM FOR THIS HOUSE!

WE SAVE YOU 30 TO 60%

For \$185.00 we can supply the complete hot water heating system for the house shown in the accompanying illustration. Perhaps this low price will surprise you, as it has thousands of others who have sent us their specifications for our estimate on a heating system for their homes. What is your idea of cost for a system that would be adaptable to the requirements of your home? Are you like thousands of others who labor under the delusion that a heating system is expensive, and a luxury entirely beyond the means of an ordinary person? If so, we urge that you write us for specifications on the complete cost for a hot air or water heating system. Will save you money!

WE GUARANTEE OUR PLANTS TO BE THE BEST!

You run no risk whatever when you buy a plant from us. It is absolutely guaranteed in every respect. We furnish a *bona fide* bond with each plant we sell. Don't labor under the erroneous impression that our plants are second-hand. Every item, even to the most minute fitting, is warranted brand new and perfect in every detail.

PLANT PAYS FOR ITSELF IN FUEL SAVING!

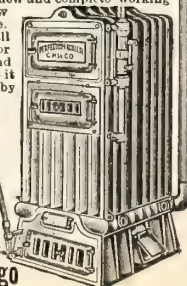

We will sell you a plant that will pay for itself within a few years in the economical consumption of fuel alone. This is not an idle assertion; it's the absolute truth. It will pay you to put away your stove and install one of our heaters at once; you don't have to pay the retail prices. You can buy a new and complete working plant from us that will meet your requirements in every particular, no matter how exacting you may be and at a price that is positively beyond duplication elsewhere. One of our plants installed in your home means an even distribution of heat in all parts of the house, with none of the nuisances so common when stoves are used for heating purposes. We sell you the material and furnish the complete plans and instructions. You can install the plant yourself or hire an ordinary mechanic to do it for you. Thousands have done it. You can do likewise and save 75 per cent by dealing with us. Write for our special book, "Cold Weather Comfort," mailed free.

Send For Free Catalog We Have Hundreds of Other Letters Like This One.

Gentlemen—You will remember me buying a Hot Water Heating plant of you last Fall. It has given Perfect satisfaction and I am sure you will sell many more in this place. Name furnished upon request.

CHICAGO HOUSE WRECKING CO., 35th & Iron Sts., Chicago

A POULTRYMAN'S NECESSITY.

According to men who know—poultry keepers who are practical and successful—there is nothing of greater value in the feed room than a good, easy working, always ready bone cutter.

Cut green bone, freshly cut, of course, is as much part of the regular ration as corn. Consequently the necessity of the machine.

Many may claim to be good; but there is quite a difference in construction and ease of operation, and this is most apparent when one is familiar with the Crown Bone Cutter, made by Wilson Bros., Box 600, Easton, Pa.

This handy machine works quickly and simply, turning out the bone shavings in just the shape for quick digestion by the fowls.

One of their catalogs, sent on request, will explain the principle and give you valuable information on egg laying. Write for it.

THE BEST TIME TO CAPONIZE.

Fowls hatched any time of the year make fine capons, but from now on the next thirty or forty days is the best time, although no ill result follows the operation at any time of the year; but it is most important that the bird should be of correct size; that means from two to four months, although if they are not very large they can be caponized up to six months. The size is equally as important as the age. Fowls that are caponized in the summer

G. P. PILLING & SON, PHILA.

months are best for the reason that spring chickens arrive at proper age and weight during these months, also because cockerels that are caponized arrive at the proper age and weight for market during the months of December, January, February and March, at which time is the greatest demand for them in the cities and the highest prices paid.

We recommend our readers to write to G. P. Pilling & Son Co., — Arch street, Philadelphia, Pa., asking for their Guide for Caponizing. It will be sent to any of our readers free of charge.

After reading this little pamphlet we recommend you to get a set of the "Easy to Use" Caponizing Tools, read over the directions and begin the work.

FREE ROOFING SAMPLE.

Since the appearance on the market of ready roofings that need no painting, there has been a very lively curiosity on the part of many people to see the goods. Accordingly the makers of Amatite, the best known of this class of roofings, have arranged to supply samples to any inquirer free of charge.

These samples show the goods complete with the mineral surface which replaces paint as a protection against the weather, and it is easy to obtain a very good idea of just what Amatite is like.

All you have to do in order to obtain the sample is to send a postal card request for same to the nearest office of Barrett Manufacturing Company, at New York, Chicago, Philadelphia, Boston, Cincinnati, Cleveland, Pittsburgh, Minneapolis, St. Louis, Kansas City or New Orleans.

Do you know of any labor-saving device for sowing seed? I have a large market garden, and it is hard and costly work to plant it, to say nothing of cultivating it.

The Planet Jr. combined seeder, wheel-hoe, cultivator and plow is an admirable implement for just the kind of work you have to do. It not only sows seed, but you can use it to keep the ground in thorough condition until your crop is ready to market. It is said you can do as much with it as six men could do by old methods, so that is a saving of both time and money. S. L. Allen & Co., Box 11077, of Philadelphia, Pa., issue a large free catalog of Planet Jr. implements.

A GREAT LAKES HONEYMOON.

The D. & C. Lake Lines Offer the Popular Trip for Mr. and Mrs. Newlywed.

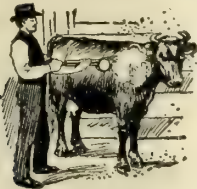

A wedding trip which is appropriate, enjoyable and gives the desired seclusion at the least possible cost is via the D. & C. Lake Lines between Detroit, Buffalo and Niagara Falls and Cleveland, Detroit and Mackinac.

The steamers are elegantly furnished and staterooms or parlors can be reserved in advance. Send two-cent stamp for illustrated pamphlet. Address

D. & C. Navigation Co.,
Passenger Department, Detroit, Mich.

HOW TO SAVE \$75.00 WORTH OF MILK IN NINETY DAYS ON FIVE COWS.

Also how to save your garden and fruit crops, and have your cows, horses, hogs and poultry free from the awful torments of flies, mosquitoes, lice, ticks and warbles, is fully explained in a very neat booklet which is being mailed free for the asking by the Rippley Manufacturing Company.

Dept. 27, Grafton, Ill. This booklet tells you just how you can have your cows and horses protected from flies; also teaches you how to use Fly Remover so that your cows will increase their flow of milk from 30 to 50 per cent; also how you can save \$75 on five cows in ninety days. It also teaches how to save the garden and fruit crops, and how to kill chicken lice.

The above firm sells Fly Remover, which has been on the market for years under a guarantee to protect your cows or refund money. See their advertisement in this issue and write for their booklet.

Lakewood Farms, of Lakewood, Eaton-town and Vineland, announce the opening of their new store at North Lincoln avenue, Elberon, N. J. (opposite the Elberon railroad station), and invite their patrons and the public to an inspection of the finest farm store in Elberon and vicinity. No pains have been spared to make this the ideal of what a farm store should be and the products will speak for themselves.

The reputation made by Lakewood Farms will be only an incentive to further efforts to furnish farm products having the purity and flavor of those produced on the private estate of the country gentleman.

A visit to the Lakewood Farms' store will be considered a favor.

See their ad in this issue.

Office of Clerk of Pleasant Valley Township, Fayette County, Elgin, Iowa, March 12, 1909.

Chicago House Wrecking Company, Chicago, Ill.

Gentlemen: I acknowledge receipt of shipment of order No. 0920, which arrived in good order, full count and material most satisfactory. Please accept my thanks for your promptness.

When and wherever I shall have an opportunity to speak a good word in your behalf, and express my entire satisfaction with my purchase of building material from you, I certainly will gladly do it.

Wishing you success, I remain,

Yours very truly,

(Signed) Melchior Luchsinger.

(The above refers to second shipment.)

Ira C. Keller, Prospect, Ohio, the noted Wyandotte breeder, is making an extensive sale of Wyandottes at one-third price for July. He claims this is the finest lot of birds that has ever been offered in this country; but he desires to move them quick. Better write him today and mention American Poultry Journal.

A. W. Blanchard, Beloit, Wis., breeder of high class Rose Comb Rhode Island Reds exclusively, and who has been a prize winner at Chicago, Rockford and elsewhere, is

offering in this month's advertisement 500 pure blood chickens from four weeks to three months old, all hatched from the best pens of prize winners by hens. Also some laying hens and pullets. Here is a good opportunity to get some Reds of high quality.

Kitselman Bros., Box 295, Muncie, Ind.,

Please read the Orpington ad of F. C. Bailey, of Reading, Mich., R. No. 19, in this number, offering stock and eggs at summer prices.

Inside Facts About All Kinds of Roofing

Before deciding on *any* roofing, for *any* purpose, send for our free book which will give you the inside facts about all roofings—shingle, tin, tar, iron—and prepared, or "ready" roofings.

This book is fair, frank, comprehensive. It tells all about the cost of each kind of roofing. It tells the advantages and the disadvantages of each, as we have learned them in twenty years of actual test. It is a veritable gold mine of roofing information.

The reason we send it free is because it tells, too, about Ruberoid roofing.

The First "Ready Roofing"

Since Ruberoid roofing was invented, nearly twenty years ago, there have sprung up more than 300 substitutes. Many of these substitutes have names which sound like Ruberoid. Before they are laid and exposed to the weather, they *look* like Ruberoid. But don't let these facts deceive you.

RUBEROID

(REGISTERED IN U. S. PATENT OFFICE)

Be sure to look for this registered trademark which is stamped every four feet on the under side of all genuine Ruberoid. This is your protection against substitutes which many dealers brazenly sell as Ruberoid. Ruberoid is usually sold by but one dealer in a town. We will tell you the name of your Ruberoid dealer when you send for our free book.

A roof of Ruberoid is flexible enough to stand the contraction of the cold and the expansion of the sun's hot rays.

It is so nearly fireproof that you can throw *burning coals* on a Ruberoid roof without danger of the roof taking fire.

It is rain proof, snow proof, weather proof. It resists acids, gases and fumes.

These wonderful properties of Ruberoid are due to the Ruberoid gum which we use—our exclusive product.

Ruberoid roofing also comes in attractive colors—Red, Green, Brown, suitable for the finest homes. These color roofings are made under our exclusively owned United States and foreign patents. The colors of Ruberoid do not wear off or fade, for they are a *part* of the roofing.

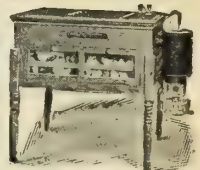

If you are going to roof, though, learn about *all* roofs. To get this book, address Department 77C The Standard Paint Company, 100 William Street, New York.

THE STANDARD PAINT COMPANY, Bound Brook, N. J.

New York, Chicago, Kansas City, Boston, Philadelphia, Atlanta, Memphis, Denver, San Francisco, Montreal, London, Paris, Hamburg

The Incubator YOU Want is the One that Hatches the Most "Livable" Chicks

It makes no difference to you on what principles a machine hatches—**BUT** it does make a difference how many "livable" chicks you get from each hatch. It is very discouraging to find at the end of the 21 days that from $\frac{1}{2}$ to $\frac{3}{4}$ of the chicks are "dead-in-the-shell" and a few days later to have "white diarrhoea" carry off $\frac{1}{2}$ the remainder. The trouble is **improper hatching**. What you and every other buyer of an incubator wants is a machine that hatches chicks that live. When we tell you **we have that incubator** we don't base our claim on theory or guesswork, but instead on actual, practical results already obtained by those who are operating our machines. For instance read Mr. Leon L. Hough's letter. We have hundreds just as strong.

Prairie State Incubators and Brooders

work on a different principle than any others. They copy nature almost to perfection. That's why they not only hatch **more** chicks and raise them, but why they hatch **bigger, stronger** chicks—chicks that live and incidentally they are the kind that bring you profit. You will be interested to learn how they do this so successfully. Our 1909 Catalog tells the whole story. It's free.

PRairie STATE INCUBATOR CO.,

468 Main St., Homer City, Pa.

12,000 Big Strong Chicks
Were hatched by me in Prairie State Incubators during April, May and June this year. The hatches averaged better than 90 per cent and went as high as 98 per cent. These chicks were shipped as far as 2,000 miles with only 7 reported dead in the whole 12,000. How is that for vigor? LEON L. HOUGH, Canisteo, N.Y.

We Are Offering

CLASSIFIED ADS

UNDER this heading ads will be inserted for six cents per word each month for less than three months, and four cents per word each insertion for three months or longer. Changes in copy allowed every three months. Numbers and initials count as words. All ads will be inserted under classified headings. No ads accepted at less than an average of fifty cents per insertion. Terms, cash with each ad. Count the words carefully to avoid delay in publishing. Write your copy plainly, as upon this the correctness of your ad largely depends. When placing your ads remember that advertisers of Classified Ads get better returns from AMERICAN POULTRY JOURNAL than from any other poultry journal—none excepted. On writing any of these advertisers mention A. P. J.

ALL COPY FOR CLASSIFIED ADS MUST REACH US BY THE 19th OF THE MONTH PRECEDING DATE OF ISSUE

ORPINGTONS.

LOOK! 300 JANUARY HATCHED White Orpingtons, now ready to lay, \$5 per trio. Cockerels, sons of pullet that layed 113 eggs before year old, \$2.50 each. Show pullets and cockerels ready for state fairs, \$5 each. We breed scientifically for eggs as well as show points. In Buffs we imported Frank Sisson's two best pen-hens weighing up to 12 pounds each, with wonderful soft even color and under-color, immense bone. We sell eggs from these wonderful birds at half price now. Here is opportunity for people living north of Ohio river. We hatch all summer; why not you? In Blacks our best pens remain intact and eggs are now half price. We have bred and sold such Blacks as Nabob 1st that won first at Madison Square, Boston, Cleveland, and we have better birds now than we ever sold. Remember our cheapest pens are headed by show cocks. No plant in America operates on closer margin of expense—no big salaries, no brass band—just quality. You will pay some breeders \$10 per sitting for poorer eggs than we sell at \$3. Our highest priced eggs cannot be duplicated at any price. Our catalog and bargain sale leadet tell more and are free. Brown & Coleman, Station L, Cincinnati, Ohio. 6-3

For Sale! 50,000,000 ft. of New Lumber!

Here is a chance to buy Lumber at 30 to 60 percent less than is usually asked for it. It is absolutely brand new and first-class in every particular. We bought 50,000,000 feet from lumber mills at half the usual prices and we are giving the public the benefit of it. There is absolutely no possibility for you to go wrong in this matter. Never in twenty years has Lumber been offered at such low prices as we are selling it for now. If you do not take advantage of this chance, you are certainly missing a splendid opportunity. We will quote you freight prepaid price to your railroad shipping point.

Send Us Your Lumber Bill for Estimate

Include in your list every single article you need to build or improve. It makes no difference whether you need a full carload or not, we will save you money. Our stock includes everything in the building material line and it is good material too; nothing better manufactured. Every dollar's worth of merchandise we sell is covered by a binding guarantee. Thousands of satisfied customers everywhere.

Our Capital Stock and surplus is over one million dollars. We have a complete stock of Plumbing Material, Heating Apparatus, Hardware, Fencing, Furniture, Carpets, Rugs, Office Furniture, Pipe, Culverts, Structural Iron, Machinery and practically everything under the sun at half the usual price.

POULTRYMEN!

GET THE BUSINESS! The poultry, poultry supply and egg business is dependent upon clever advertising methods for success. What you say and how you say it is paramount. My ads for poultrymen bring quick cash orders; they open the pocketbook and bring back cash orders by mail. They won't let go without receiving attention; they'll stick in the mind of the reader and laugh at the waste-basket. You'll get orders where you used to get talk, and you'll pull business away from the biggest breeders by means of my literature. Charges reasonable. Particulars free.

D. A. deLima, Special Ad-Writing Service for Poultrymen, P. O. Box 1615, N. Y.

LAKEWOOD FARM NUMBER TWO

¶ We wish to announce to our friends and patrons that we have purchased at Eatontown, N. J., a farm of 170 acres, and will there build, equip and run in conjunction with our farm at Lakewood an up-to-date breeding establishment, devoted exclusively to the breeding of the Lakewood Farm Strain of Single Comb White Leghorns.

¶ We have also increased our land holdings at Lakewood and will greatly enlarge our Lakewood farm.

¶ With our new equipment we will have housing capacity for 30,000 laying hens; incubator capacity for 60,000 eggs; brooder capacity for 51,500 chicks. Our incubator and brooder systems will be novel in the extreme, as they are heated by hot water controlled by a coal furnace, manufactured by the Hall Mammoth Incubator Co. of So. Columbia, N. Y. This equipment has been thoroughly tried out by us and the results we have obtained this season far exceed our most sanguine expectations and make possible the production of eggs and poultry in large numbers.

¶ General offices have been opened at 517 West 23d St., New York City, to which address all business communications should be sent. We invite all who are interested to call upon us when in town. We further extend to the general public the hospitalities of our farms; letters of introduction will be given to you from our general office to our managers at the farms.

New York City, May 22, 1909.

"Ringlet" First Prize Sweepstakes Exhibition Pen at Madison Square Garden, New York.

"RINGLETS" STAND ALONE, VICTORS OF THE FIELD . . .

At America's Imperial Show, Madison Square Garden, New York, Winters of 1908-1909 . .

E. B. THOMPSON'S BARRED P. ROCKS

As usual win the leading prizes and achieve the highest honors that can come to any breed. First prize on cockerel, first prize on cock, the Great National Silver Cup presented by the American Plymouth Rock Club for best cock, cockerel, hen and pullet. Double the number first prizes of any competitor. Special for best shaped male, special for best headed male, special on hen, special on pullet, the Sweepstakes Special in Gold for best Plymouth Rock on exhibition of either sex and any variety. The Imperial prize of the show, special for champion male.

At the 1909 New York Show my 1st Prize Sweepstakes Cup Exhibition Pen was Declared by Expert Opinion to be the Finest Ever Exhibited. A Paragon of Perfection. The Sun Never Before Shone on Such a Masterful Exhibit.

For more than twenty years at New York my "Ringlet" victories have been complete. Exhibited by me personally they have won a grand total of 127 prizes, 69 of these being firsts and specials, being more first and special prizes than won by any competitor in the history of the show. These include the \$100 Champion Challenge Trophy, won three times; the \$100 Association Cup, won three times; the \$100 Sweepstakes Cup offered by the President for best Plymouth Rock cock, cockerel, hen and pullet, any variety.

The "Ringlet" world's record at New York four years in succession is a page of history. The "Ringlet" record of first on exhibition pen three years in succession is the undisputed Champion. My Clean Sweep of FIRST, SECOND, THIRD, FOURTH AND FIFTH PRIZES on pullets has never been approached in Madison Square Garden, and stands alone and unequalled.

One thousand grand breeding cockerels for sale; elegant hens and pullets in any number. Show birds fit to win in any competition. Richly illustrated 50-page catalogue upon request; it is full of original pictures of New York winners from life. EGGS from the world's finest exhibition matings, one setting \$6; two settings \$11; three settings \$15; four settings \$18. Address

OWEN FARMS

WE ARE READY ARE YOU?

It is with great satisfaction that we take this early opportunity in August to inform you that never in the history of our farm have we reared so many early chicks that are fully prepared for the early fall shows. We have wished to arrive at the position which we now have attained for the three years last passed, and we will be most glad to take up your early inquiry and give you definite knowledge and descriptions of birds and prices that will do for you what you ask of them. In writing please be particular to give us the proper information so as to save time, telling us the show at which you wish to exhibit the birds and the approximate price you wish to pay, and we will give you clear and definite information. Always remember that if we can do what we think you require we will say so, and if we do not think we can give you the quality we know you are anticipating at the price, we will be equally frank and tell you so. This avoids all disappointment and accomplishes for Owen Farms what they more than anything else wish to accomplish, namely, the entire satisfaction of their customer.

White Wyandottes We predicted in our catalogue and mating list that never were such pens mated as we had this year, and we are even now sure of it. The chicks are growing fast, showing enormous promise and that we are going to be able to furnish the best White Wyandottes that this country ever saw this year, we have no hesitation in affirming. Anyone and everyone who is interested in the White Wyandotte should write us.

White Rocks We have birds at the time of writing this communication, near the middle of July, that weigh 6½ to 7½ pounds. They are a grand lot of early birds and will surely furnish you with winners for either the early shows or the later shows. As you know, our White Rocks are marvelous for their pure white color, their practically perfect type, with broad, low tails and fine heads, both in male and female. It is a pleasure to give you full detailed information when you ask it.

Buff Orpingtons We know there are many who even yet do not realize how far in advance Owen Farms are over all other breeders in America in this particular breed. We have won as many 1sts at New York as all other people combined during the last five years. We dare to say that we have made far more progress than any one in securing freedom from white and dark, absolutely good surface color, and in remarkable under color, particularly in hackle and at the base of tail where so many birds fail. We are prepared to give you definite description and prices that for quality will be satisfactory to you.

Barred Rocks To all of those interested in this great American breed we feel that it is almost impossible to impress you strongly enough with the quality that we have in cockerel bred males and females, as well as pullet bred males and females. The show stock for this year bids fair to be far ahead of anything ever yet shown. We are most enthusiastic about it, because the type is as near perfect as it is ever found; long, broad backs, well spread tails, bright red eyes, with magnificent heads, and particularly good color in shank, while the barring is clear and distinct, very narrow, and altogether making exhibition birds of wonderful quality. Surely it will be advisable for you to write us concerning our Barred Rocks.

Early Orders Do you really know what it means to you to place your orders early? We have a large number of birds and we are constantly selecting and growing and conditioning birds for the fall and winter shows, and if we have your order placed with us for future delivery we select the birds and handle them, train them and get them absolutely fit for the time when they are to be sent you. On all early orders for future delivery 25 per cent only of the amount to be paid is required in advance, the balance to be paid just before shipment. I ask each interested reader: "If you receive an order to be executed in advance, can you not give better satisfaction, and do you not consider it an advantage to the buyer?" If you answer "yes," are we wrong, then, in urging you to enter into correspondence with us at once to find out what we will do, and place your order early? Catalogues sent with full information free. Please be particular to always indicate the breed you wish, and we would also thank you to always give credit to the journal in which you see our advertisement appear. Always address

CHAPMAN'S IMPROVED TRAP NEST

At the great New York and Boston poultry shows thousands of poultrymen were unanimous in declaring the Chapman Trap Nest the leading trap nest in the world. If you want a trap nest that will do the work five years from now as well as today, you will want the Chapman Nest. If you wish a nest built upon honor you are sure to find it in this nest. Write for catalogue. 3-nest size, \$3; 6-nest size, \$6. Catalogue of Sanitary Drinking Fountains sent free for the asking. Liberal discounts to agents.

CHAPMAN TRAP NEST COMPANY, 178 Federal St., BOSTON, MASS.

NOW YOU CAN RAISE SUMMER CHICKENS

Nutrum Salts makes it possible. Bulletin

No. 2 tells why. If your Chickens are not living well or growing rapidly, send for a free copy of the Bulletin.

My discovery has also made easy the growing of broilers and soft roasters in the fall and winter for the time of high prices.

Model Incubators hatch every hatchable egg. Model Brooders, with Nutrum Foods, raise every chick. If you are raising poultry and do not know about this wonderful discovery, Nutrum Salts, you had better inquire.

I make everything the practical poultry raiser needs. Model Food Boxes, Drinking Fountains, Lice Spray, Lice Dust, Sulphur Candles, Roup Cure, Cholera Cure, Disinfectant, Scaly Leg Ointment, Poultry Remedies, Fly Driver, Naphthalene Nest Eggs, Toe Markers, Poultry Foods, Etc. All of the same high quality as the Model Incubators and Brooders which you will soon be wanting.

Get busy now. It's your opportunity.

CHARLES A. CYPHERS,

President, Model Incubator Company,
301 Henry St., BUFFALO, N. Y.

Diseases of Poultry

BY

D. E. SALMON, D. V. M.

Chief of the United States Bureau of Animal Industry

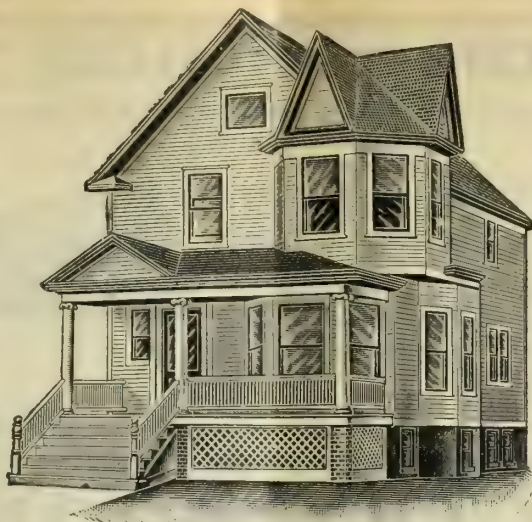

Every poultryman should have this book in their poultry library. It contains 250 pages, and every disease to which fowls are subject is treated in a most thorough manner. The cause, symptoms and cure of each disease is put before the reader in such a manner as to be understood at a glance. With this book in hand you can be your own poultry doctor. Better order one now and not wait until your fowls become ill.

THE PRICE IS ONLY FIFTY CENTS

Will send this book and American Poultry Journal one year for only 75 cents. Send all orders to

\$650 Buys the Material Needed
to Build This Home!

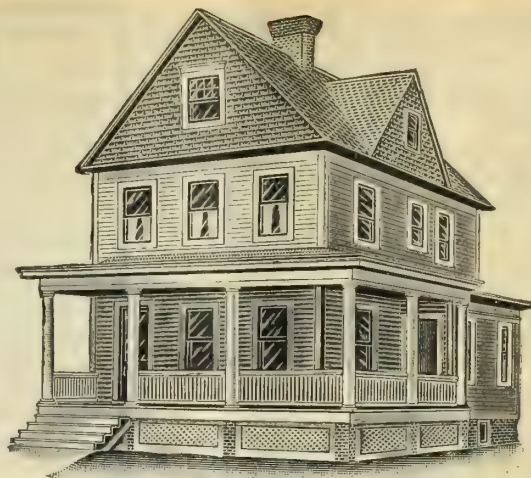

Price Includes Blue Prints; Architect's Specifications; Full
Details; Working Plans and Itemized List of Material

OUR HOUSE DESIGN No. 6

This is our leader, the best seller of any house ever designed anywhere, by anybody, at any price. Why? Because it comes nearer to filling the requirements of a home than any house of its size ever built. It is 23 ft. wide and 33 ft. 6 in. long, not including the porch. It has seven rooms, bath, pantry and a large front porch. It is of handsome appearance and symmetrical proportions. It is magnificently lighted and perfectly ventilated. Embodies every modern comfort and convenience. Our extremely low price makes it the best bargain proposition on the market. We cannot recommend this design too highly. Even if you don't need a home, build this house for an investment. You can sell it ten times over before it is finished.

\$710 Buys the Material Needed
to Build This Home!

Price Includes Blue Prints; Architect's Specifications; Full
Details; Working Plans and Itemized List of Material

OUR HOUSE DESIGN No. 133

This house appeals to persons who love out door life. It is of moderate size, having 7 rooms, bath and pantry arranged with a view to comfort and convenience. Its distinguishing feature is its large porch which extends across the front and half way to the rear on one side. This house will fit well in any locality, whether country, town or city. Build this house for your family. It is cheap at the price we are offering it. It will make you a home you will always be proud of.

We Save You Big Money on Lumber and Building Material!

The Chicago House Wrecking Co. is the largest concern in the world devoted to the sale of Lumber, Plumbing, Heating Apparatus and Building Material direct to the consumer. No one else can make you an offer like the one shown above. We propose to furnish you everything needed for the construction of this building except Plumbing, Heating and Masonry material. Write for exact details of what we furnish. It will be in accordance with our specifications, which are so clear that there will be no possible misunderstanding.

How We Operate:

We purchase at Sheriffs' Sales, Receivers' Sales and Manufacturers' Sales, besides owning outright sawmills and lumber yards. Usually when you purchase your building material for the complete home shown above, elsewhere, it will cost you from 50 to 60 per cent more than we ask for it. By our "direct to you" methods we eliminate several middlemen's profits. We can prove this to you.

What Our Stock Consists of:

We have everything needed in Building Material for a building of any sort. Lumber, Sash, Doors, Millwork, Structural Iron, Pipe, Valves and Fittings, Steel and Prepared Roofing. We also have Machinery, Hardware, Furniture, Household Goods, Office Fixtures, Wire Fencing—in fact, anything required to build or equip. Everything for the Home, the Office, the Factory or the Field. Send us your carpenter's or contractor's bill for our low estimate. We will prove our ability to save you money. WRITE US TODAY, giving a complete list of everything you need.

Free Book of Plans!

We publish a handsome, illustrated book containing designs of Cottages, Bungalows, Barns, Houses, etc. We can furnish the material complete for any of these designs. This book is mailed free to those who correctly fill in the coupon below. Even if you have no immediate intention of building, we advise that you obtain a copy of our FREE BOOK OF PLANS. It's a valuable book.

Our Guarantee!

This company has a capital stock and surplus of over \$1,000,000.00. We guarantee absolute satisfaction in every detail. If you buy any material from us not as represented, we will take it back at our freight expense and return your money. We recognize the virtue of a satisfied customer. We will in every instance "Make Good." Thousands of satisfied customers prove this. We refer you to any bank or banker anywhere. Look us up in the Mercantile Agencies. Ask any Express Company. Write to the publisher of this publication. Our responsibility is unquestioned.

High Grade Bathroom Outfits!

Price of this Bathroom Outfit, \$37.50

plumber would ask you about \$60.00 for this same outfit. This is a positive fact. It's only one of ten other complete outfits that we are offering at prices ranging from \$25.00 to \$100.00. Our catalog describes them in detail. You need the book if you want to keep posted on up-to-date business methods. Get our prices on Pipe and Fittings. Write us today.

Strictly new and as good as anyone sells. We have everything needed in Plumbing Material. Our prices mean a saving to you of 30 to 60 per cent. We can easily prove it if you will give us a chance. Here is an illustration of a bathroom outfit we are selling at \$37.50. Your

Hot Water Heating Plants!

We furnish new complete hot water heating outfits at half the usual prices. Our proposition includes all necessary plans, specifications, blue prints and detailed instructions; so that any ordinary mechanic handy with the use of tools can easily install it. You can't go wrong when you deal with us. We stand back of every sale. You send us today a sketch of your building and we will make you a proposition to furnish you a complete steam or hot water heating outfit. We also have hot air furnaces. Our booklet on heating plants tells every feature of the heating question. We can quote radiators and heaters separately. Whether you buy from us or not it is a valuable book for you to own. Write us today.

DON'T BUILD

that new hen house or fix up the old one until you get our large new 100 pp. catalog (over 100 illustrations) telling all about Potter Poultry House Fixtures, Perfection Feed Hoppers, Simplex Trap Nests, feeds and supplies of all kinds. Potter Fixtures have been on the market over 8 years and are used by thousands of poultry keepers. They are complete, convenient and sanitary; made in 3 styles and 12 sizes to fit any hen house.

We now make the complete line of PORTABLE (K. D.) HOUSES, BROOD COOPS, PIGEON LOFTS, etc., formerly made by the Morgan Sanitary House Co., of Lemont, Ill. These are made in 20 different styles and sizes, and if you want a complete, up-to-date and cheap house or coop of any kind you should not fail to send for large illustrated catalog telling all about these goods.

DON'T KILL or sell your laying hens; use the POTTER SYSTEM and pick out the layers from the loafers and keep only healthy laying hens. The Potter System is the greatest discovery of the century in the poultry world and is used by over 25,000 poultry keepers. You can save dollars every year by using our system, because you keep only layers. Our new 100 pp. book entitled "Don't Kill the Laying Hen" is a revelation to poultry raisers on the subject of laying and non-laying hens and egg production.

Potter Poultry products are for Particular Poultry People, and if you are particular and want to make more money on your flock you will write today for our catalogs and circulars.

THE PHILO SYSTEM

IS ESPECIALLY VALUABLE TO THE FARMER AS WELL AS THE CITY OR VILLAGE FANCIER AND IS ADAPTED TO ALL CLIMATES, ALL THE BREEDS AND PEOPLE

The Philo System is Unlike all other Ways of Keeping Poultry

and in many respects it is just the reverse, accomplishing things in poultry work that have always been considered impossible and getting unheard of results that are hard to believe without seeing. However, the facts remain the same and we can prove to you every word of the above statement.

The New System Covers All Branches of the Work Necessary for Success

From selecting the breeders to marketing the product. It tells how to get eggs that will hatch, how to hatch nearly every egg, and how to raise nearly all the chicks hatched. It gives complete plans in detail how to make everything necessary to run the business and at less than half the cost required to handle the poultry business in any other manner. There is nothing complicated about the work and any man, woman or child that can handle a saw and hammer can do the work.

Two Pound Broilers in Eight Weeks

are raised in a space of less than a square foot to the broiler without any loss and the broilers are of the very best quality, bringing, here, three cents per pound above the highest market price.

Our Six-Month-Old Pullets Are Laying at the Rate of 24 Eggs Each Per Month

in a space of two square feet for each bird. No green cut bone or meat of any description is fed, and the food is inexpensive as compared with food others are using.

Our new book, **THE PHILO SYSTEM OF PROGRESSIVE POULTRY KEEPING**, gives full particulars regarding these wonderful discoveries, with simple, easy-to-understand directions that are right to the point, and fifteen pages of illustrations showing all branches of the work from start to finish. It also tells how to make a brooder for twenty-five cents that will automatically keep all lice off the chickens or kill any that may be on them when in the brooders.

Our New Brooder Saves Two Cents on Each Chicken No lamp is required. No danger of chilling, overheating or burning up the chickens with the brooders using lamps or any kind of fire. They also keep all lice off the chickens automatically, or kill any that may be on them when placed in the brooder. Our book gives full plans and the right to make and use them. One can be easily made in an hour at a cost of from 25 to 50 cents.

A Few Testimonials

Valley Falls, N. Y., Sept. 5, 1907.
It was my privilege to spend a week in Elmira during August, during which time I saw the practical working of the Philo System of Keeping Poultry and was surprised at the result accomplished in a small corner of a city yard. Seeing is believing, they say, and if I had not seen, it would have been hard to believe that such results could have followed so small an outlay of space, time and money.
(Rev.) W. W. COX.

October 22, 1908.
P. S.—A year's observation, and some experience of my own, confirm me in what I wrote Sept. 5, 1907. The System has been

tried so long and by so many, that there can be no doubt as to its worth and adaptability. It is especially valuable to parties having but a small place for chickens; seven feet square is plenty for a flock of seven.
(Rev.) W. W. COX.

Ransomville, N. Y., Dec. 5, 1908.

Dear Sir:—Last spring we purchased your book entitled the "Philo System," and used your heatless brooders last spring and summer. The same has been a great help to us in raising the chick in the health and mortality, the chicks being stronger and healthier than those raised in the brooders with supplied heat. We believe this brooder is the best thing out yet for raising chicks successfully. We put 25,000 chicks through your heatless brooders this last season and expect to use it more completely this coming season. We have had some of the most noted poultrymen from all over the U. S. here, also a large amount of visitors who came daily to our plant, and without any exception they pronounce our stock the finest and healthiest they have seen anywhere this year.

Respectfully yours,

W. R. CURTISS & COMPANY.

Are They Worth Saving?

Don't Let the Chicks Die in the Shell

One of our secrets of success is to save all the chickens that are fully developed at hatching time, whether they can crack the shell or not. It is a simple trick, and believed to be the secret of the Ancient Egyptians and Chinese which enabled them to sell the chicks at 10 cents a dozen. It takes but a minute to save a chick and no skill required.

Note What Others Say of This "Trick of the Trade"

Ringwood, Ont., Can., May 6, 1908.
Dear Sir:—Some time ago I got the Philo System and must say it is the best book I ever read on Poultry. I have tried the "Trick of the Trade" and saved twenty-two chickens which otherwise would have died.
Yours truly,

ROY MOYER.

Bethlehem, Pa., April 25, 1908.
Dear Sir:—Your book safely to hand, and have derived great benefit from it, especially "A Trick of the Trade."

Respectfully yours,

G. H. STANFORTH.

Potomac, Ill., May, 1908.
Dear Sir:—I am using your System of Progressive Poultry Keeping and consider it the best work on Poultry Raising I ever read. In my last hatch I saved twenty-three chickens by following the article, "A Trick of the Trade."

Yours truly,

FRED JANISON.

Send \$1.00 and a copy of the latest revised edition of the book will be sent you by return mail. Address

Extraordinary Clubbing Offer

\$1.50 for 75c

How to save money on poultry literature for 1909. Three of the best poultry publications, practically supplying the entire needs of a poultryman, furnished for one-half the regular price. * * * * *

Our Big "3" Combination

American Poultry Journal } All Three for
Western Poultry Journal } **75c**
Farm-Poultry }
Regular price \$1.50

Farm-Poultry, published at Boston, Mass., is one of the oldest and best poultry magazines published in the East, and is now in its 20th volume. This magazine is always full of valuable information pertaining to thoroughbred poultry, and covers the Eastern field in a most thorough manner.

Western Poultry Journal, published at Cedar Rapids Iowa, is also in its 20th volume, and is one of the most up-to-date poultry magazines published in the West. The two, together with the old reliable American Poultry Journal, now in its 40th volume, thoroughly covers the entire field of poultry literature, and make a poultry library in themselves.

This is the Greatest Combination Ever Offered by a Poultry Paper

and is especially so when you take into consideration the fact that American Poultry Journal will during the coming season, publish one more of those handsome colored plates of poultry, which alone is worth the price of a year's subscription to any one interested in thoroughbred fowls. This offer is for both new and renewal subscriptions. Cut out the coupon and send in your order today. Address all orders to

Flower Offers

Without Cost to You

Five Beautiful Roses (Order as No. 101)

Many of these roses when in bloom sell for \$4.00 to \$6.00 per dozen at a florist's. You get all these five varieties—Climbing Meteor, bright red, yellow Rambler, bright pink, pure white.

Four Elegant Ferns (Order as No. 104)

This collection consists of the leading varieties—Boston, Emerald, Fountain, Asparagus. These varieties frequently sell for 50 cents each.

Five Fragrant Carnations (Order as No. 109)

The carnation was President McKinley's favorite flower. This collection contains five different colors—one rich scarlet, one deep pink, one light pink, one white, one white striped with scarlet.

Six Magnificent Chrysanthemums (Order as No. 102)

We will send in this collection six of the large, showery Japanese varieties, as follows—one pure white, one deep yellow, one light yellow, one light pink, one deep pink, one beautiful red.

OUR OFFERS

No. 1—Send us only 35 cents and we will send you **FARM AND FIRESIDE** for the rest of 1909—20 numbers—and any one collection of flowers above, prepaid.

These collections if purchased from a flower dealer at retail would cost you from 50 cents to \$1.00 each. (Be sure to state which month you will want your flowers sent to you.)

Our Guarantee—These plants will be large, healthy and well rooted, and will bloom this season of 1909. They are exactly as described or money refunded.

Farm and Fireside comes twice a month, and stops when your time is up. It is for the farmer and his whole family. There is no other farm paper quite as interesting, helpful or valuable. **FARM AND FIRESIDE** prints and circulates each month more copies than any other farm paper. That shows how well it is liked!

Send your order promptly to **FARM AND FIRESIDE**, Dept. D, Springfield, Ohio

No. 101

A Trip Through the Entire United States

How Would You Like To See Every Point of Interest in Your Own Country?

WE HAVE just issued fifty beautiful multicolored Post Cards, showing all the beauties of our glorious country. The photographs for these cards were taken by an artist who made a special trip to secure them, and not a single spot worth seeing was overlooked. These cards illustrate our great country from one end to the other. There is no education like traveling. This beautiful set of Post Cards is the only substitute you can have for a trip like this. You won't know what a beautiful and interesting country you live in until you take this wonderful Post Card trip. It would cost you hundreds of dollars to see all these places.

From the beautiful city of New York we start on a trip through our glorious country, stopping at Sherry's restaurant in New York, the world-renowned place of gaiety and famous throughout our entire country. The Zoo-Garden in Central Park is the largest in the world and is supported by the city of New York at an enormous expense.

As we are anxious to get a glimpse of the Atlantic ocean before starting westward, we take a short trip across the state of Massachusetts and visit the old town of Boston, of which we have read so much in history. After visiting the chief points of interest, we return to New York and board the Twentieth Century Limited, which is the fastest and finest train in the world, making an average speed of sixty miles an hour between New York and Chicago. On our post card trip we have the privilege of stopover at whatever place we want to visit. Our first stop is at West Point to see the National Military Academy and our future generals at drill practice.

It being Sunday, we visit Christ Church of Philadelphia and Sunday evening we go to the famous Cathedral in Baltimore. The next morning we arrive in Washington, D. C., where we inspect our national capital and from there we go to Cleveland, O., that is so famous for its beautiful streets and parks. A trip on Lake Erie is next on our program. We travel from Cleveland to Buffalo, N. Y. After visiting that interesting city, we return by waterway to Cleveland and travel by train to Lansing, Mich., to inspect the beautiful new capital building and then go direct to Chicago, arriving at the new LaSalle street station in that city.

We then take the Northwestern train for Minneapolis to give you a glimpse of this beautiful city. In our travels west we pass through the National Yellowstone Park, with its beautiful scenery and waterfalls, and go to Spokane, Wash., where we find the city hall a most beautiful building and from there we have a birds-eye view over the entire city. The next city which we visit is Seattle, the wonderful metropolis of the far west, with its beautiful scenery and Puget Sound.

In Portland, Ore., we have another evidence of the development of our western country, and on our way from Portland to San Francisco we see a number of large trees for which the western coast is famous. The view of Humboldt bank in San Francisco shows the wonderful recuperation of this great city since the earthquake, with its skyscrapers and wonderful buildings.

On our way to Los Angeles we notice a number of beautiful palm drives, and Spring street, in that city, is, indeed, to be compared with Paradise. One of the most interesting sights of our California trip is the growing oranges and the pretty city of San Bernardino in Southern California. Turning our journey eastward, we pass through a number of Arizona towns, which remind us of the stories of the far west.

In traveling through Colorado we see the greatest scenery of the world, such as the hanging bridge in the Royal Gorge and a large number of prehistoric cave dwellings, so old that there is no written history of them. The double tunnel at Eagle Canon is one of the engineering masterpieces of the century.

In New Mexico we visit the villages, showing typical New Mexico life and find the quaint houses and customs of the people very interesting. In the great state of Texas, famous for the great and brave men it has produced, we see a number of western cowboys. The Law building at Austin, the capital of Texas, is one of the prettiest buildings we shall see in that state. The orange and fig trees of Texas convince us of the greatness of our country.

The great and quaint city of New Orleans, La., is the most picturesque spot that we have visited, being a very old city on one side of Canal street, with houses of French and Spanish architecture, while the buildings on the other side of Canal street are as modern as on Fifth avenue in New York, or Michigan avenue in Chicago. In Mobile, we visit one of the largest cotton compresses, where the cotton is compressed into bales to be shipped to all parts of the world. Eastward bound, we stop at Savannah, where we see the imposing Pulaski monument, a great attraction for strangers.

Have won many first and other prizes at the leading shows throughout the country during the past seven years. A few fine breeders for sale at less than half their true value. Hundreds of young stock growing into prize winners. Eggs half price, \$2.50 for 15, balance of season. :: O. A. Bogardus, Box 31, Warsaw, Kentucky

BUFF ROCK EGGS

The Gold Medal Strain. Eggs \$3 and \$5 per 15: from the greatest prize winning strain in the world. Send for handsome mating list; free on request. I guarantee to please or money refunded.

Dearborn Poultry Yards, S. D. Lapham, Prop. : : Box A, Dearborn, Michigan

METCALF'S SINGLE COMB BUFF ORPINGTONS

The best in the West, and winners at Chicago, St. Louis and State Show. This year's breeders for sale cheap in order to make room for as fine a flock of young as I ever raised.

MERRILL B. METCALF : : BOX F : : GREENFIELD, ILLINOIS

NOFTZGER'S PARTRIDGE ROCKS

Winners for me and my customers all over the United States. They will win for you, too. Send for catalogue of the greatest of all new breeds. Ask any judge what he thinks of Noftzger's.

S. A. Noftzger, Originator of Partridge Rocks : : R. 8, North Manchester, Indiana

POULTRYMEN!

GET THE BUSINESS! The poultry, poultry supply and egg business is dependent upon clever advertising methods for success. What you say and how you say it is paramount. My ads for poultrymen bring quick cash orders; they open the pocketbook and bring back cash orders by mail. They won't let go without receiving attention; they'll stick in the mind of the reader and laugh at the waste-basket. You'll get orders where you used to get talk, and you'll put business away from the biggest breeders by means of my literature. Charges reasonable. Particulars free.

D. A. deLima, Special Ad-Writing Service for Poultrymen, P. O. Box 1615, N. Y.

BUFF, BLACK, WHITE AND DIAMOND JUBILEE ORPINGTONS

NONE BETTER BRED. At the great Boston Show, Jan. 12-16, 1909, we won the following in strong competition: 1st pullet, 3d hen, 5th cock, 5th ckl, and 2d pen in Buffs; 2d cock, 3d hen and 1st pen in Blacks; 1st pen in Whites; 1st ckl, 1st and 3d pullet, 3d and 4th hen in Diamond Jubilees. Send for 1909 mating list containing these grand matings.

H. B. PRESCOTT - Box 37 - Derry Village, N. H.

Your Opportunity

To get eggs from matings of Barred and White Rocks, White Wyandottes and Golden Sebright Bantams equal to any in the United States. \$3.00 per 15, \$5.00 per 30, \$15.00 per 100. Size, shape, color, vigor and each free exclusive farm range.

RHODE ISLAND REDS : BARRED ROCKS : WHITE WYANDOTTES

Now is the time to buy yearling breeders. A choice lot; low prices. Write me now before the best are sold. 200 egg strain. Catalogue free. Stamp for Red Standard.

Delventhal's Buff Rocks

After June 1st will sell eggs from my St. Louis and Kansas City winners at \$2 per setting. Breeders for sale after July 1st. Send for booklet. : :

E. L. Delventhal : : Box A : : Warrenton, Missouri

Important Announcement!

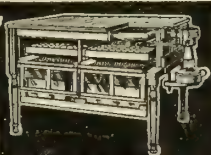

Owing to ill health we have decided to dispose of our entire flock of R. C. and S. C. Black Minorcas without reserve. All of our grand prize winners at New York, Boston and Guelph included. We believe we have the choicest flock of Black Minorcas on the Continent today, and to sell quickly we quote the following low prices: 10 grand R. C. cocks at \$5 to \$25 each; (several of them as good as the R. C. cock I paid Mr. Northup \$1,300 for.) 7 grand S. C. cocks at \$5 to \$25 each. 50 each of R. C. and S. C. hens at \$3 to \$10 each. These hens were all used in our breeding pens the past season. 150 March and April S. C. pullets (grand lot) at \$3 each. 75 March and Apr. R. C. pullets (nest we ever saw) at \$3 each. 100 March and April R. & S. C. chicks, best we ever raised, \$3 to \$10.

T. A. Faulds : Proprietor Canada's Best R. C. and S. C. Black Minorcas : : London, Ont.

RECORD BOOK *FREE*

It will show you how many eggs were laid today, how many chickens you are hatching, how many you raise and sell, and just what each hatch nets. Men who are succeeding in other lines of business keep such records. Why should not you, when we start you free?

Ertel's Poultry Diary has hundreds of money making pointers for the poultry man—how to have eggs and broilers to sell when prices are high—how to raise the heaviest fowls—how to take care of the flock—how to feed—how to treat sickness. The Diary tells about our new side regulators. They leave the top of the incubator entirely clear. Other improvements follow the suggestions of U. S. Department of Agriculture experts. We make low prices. We pay the freight. Get Ertel's Poultry Diary and watch the progress in incubator construction. It costs only a postal and may save you a mistake in purchasing an out of date machine. Better write us today. **CEO. ERTEL CO., Quincy, Ill.** Established 1867.

HOT? COMPETITION? NEW YORK SHOW

It was the hottest competition ever brought together in WHITE WYANDOTTES, but that is what my birds want and why I won the big end of it. They have the habit! That's a feature you want in your flock, so as to be in the firing line, challenging all comers. I shall dispose of some fine breeders this summer and shall have for the fall fairs the choicest stock I ever had. If you want to be "in it" better take up the matter now. It is none too early to get a line on the best. Stock for sale at all prices.

Write your wants to the breeder who has made possible the world's best flocks. Catalogue sent for 10 cents.

Make Money Growing Fruit

The scientific growing of fruit offers today the finest opening in the entire line of farming operations to one who wants to get ahead in the world financially, and at the same time build a home and have surroundings which will make life worth the living. The growing of fruit has now become a science and success will surely crown the efforts of one who enters this field, makes a careful study of the industry and follows teachings of many growers who make big money on fruits.

THE FRUIT-GROWER

ST JOSEPH, MISSOURI

is the leading magazine devoted to horticulture. It contains monthly as high as eighty pages of up-to-date illustrated matter, which places its readers in position to earn maximum profits on fruit. In some sections orchard land owned by Fruit-Grower readers is sold as high as \$4,000.00 per acre, and in many sections it is being sold at one thousand to two thousand dollars per acre. In no other branch of farming can land values be made so high. The lands mentioned above are worth the money, as they pay interest on the amount.

FREE LAND INFORMATION

Among the many departments in the interest of our readers is "The Fruit-Grower Land and Colony Department." It is our aim to give complete, authentic information in regard to lands in any section of the country where our readers may contemplate purchasing. This advice will be worth thousands of dollars to anyone who figures on buying land for investment or for a home. The editor of The Fruit-Grower has personally inspected many fruit-growing sections, and we are in position through our subscribers to secure reliable data regarding any section on the continent.

For several years we have been trying to secure a fine tract of land to be colonized by members of The Fruit-Grower Family. Numerous tracts have been offered us, but after sending experts to examine each in regard to soil, climatic conditions, etc., they did not come up to our standard of excellence. We will not use anything but the very best possible location for this colony, and we hope to secure the proper one in a short time. If you are interested in purchasing land either for a home or for investment, fill out blanks below and send in with our special trial coupon.

METAL MOTHERS

OUR NEW DISCOVERIES MAKE

POULTRY KEEPING EASY AND PROFITS SURE

OUR MACHINES were used exclusively in the original Philo System plant where over \$1500 FROM 60 HENS IN TEN MONTHS, has been cleared from the sale of eggs, baby chicks and fowls raised on a city lot 40 feet square. One of the largest hatching plants in America saved over \$700 this year by using our System of brooding. We sell the best brooder ever made for only \$2.50.

One party hatched and raised \$500 worth of poultry last year with four Metal Mothers, and hundreds of others are delighted with our machines and our new way of raising poultry. Our combined machine hatches and broods perfectly at the same time with only one lamp and one-fifth the oil used in other machines. Once filling the lamp completes the hatch. It runs as steady as a clock in any room from cellar to garret, and our Long Burning Safety Lamp runs on for weeks without attention. It is the only machine that airs the eggs in the natural way and applies the heat to the chickens like the mother hen.

THE BROODER-HATCHER

OUR 1909 PATTERN METAL MOTHERS

are the perfected results of the latest discoveries in artificial incubation. They will hatch hens, ducks, turkey and goose eggs equally well and at the same time. Regulation of moisture and heat entirely automatic. One Metal Mother complete \$7.50; two, \$14; four, \$24. One Hatcher complete \$5; two, \$9; four, \$17; six, \$24. Catalogue free.

The Cycle Hatcher Co., Elmira, N. Y.

Dear Sirs:—As per your letter I will send you an order for six machines in a few weeks. Am hatching with the one I now have. Got 47 chicks from 50 eggs. Have abandoned all my 200-egg machines. Am practicing in my store with a view to starting my 40-acre poultry plant near town here. Think I can sell a lot of these machines next year.

H. W. White, 311 Ada St., Yankton, S. D.

The Cycle Hatcher Co., Elmira, N. Y.

Gentlemen:—The hatcher we bought of you last May is all right. We took off two batches with it; one of 43 chicks and one of 46 chicks. All good ones. Yours respectfully, G. W. Simpson, Austin, Pa.

The Cycle Hatcher Co., Elmira, N. Y.

Sirs:—You people may be interested to know what an experiment with one of your Metal Mothers has done for us. On the 17th of Oct. we put 40 eggs in your machine, 38 of them being fertile, and when hatching time came we were surprised to find 38 chicks from our 38 eggs. This we think an excellent record, for the machine had been placed out in the open weather, the only protection being an old tin covered box. Yours respectfully, J. P. & L. L. Hollinger, R. I. Red Farm, Witmer, Pa.

Cycle Hatcher Co. - 214 Wm. St., Elmira, N. Y.

POULTRY DISEASES—PREVENTION AND CURE

On the Health of the Initial Stock Depends Future Success—Proper Feed to Keep Fowls Healthy—Diagnosing Diseases of Fowls—Treatment for the Various Diseases to Which Fowls are Subject

Written for American Poultry Journal by Karl T. Brown, M. D., Crawfordsville, Ind

WRITING of poultry diseases, the prevention and treatment of same, it will only be my intention to speak of the more common diseases that are met with in the average poultryman's flock.

There are numerous things to be considered in relation to health and disease of poultry.

It has been said, and well said, that an ounce of prevention is worth a pound of cure, and no place is it more true than with poultry, and it is an evident fact that it is easier to prevent disease than it is to cure it

among poultry. The government in establishing an army post looks first to the location as to its sanitary situation and the prospects of keeping such location in a sanitary condition, and the same rule should apply to those about to establish a poultry plant, for if you expect to have a healthy army of chickens you must take the necessary sanitary precautions first.

The land selected need not be high-priced, but must be well-drained, plenty of good water the year round, a sand soil, with more or less shade and a dry location for dampness and wet breeds disease among poultry quickly; the land should have a south, southeast or southwest slope.

The buildings should be so constructed as to give the proper amount of warmth and ventilation and the climate should govern the construction of the buildings to a certain extent.

The initial stock should be well selected, for upon this depends to a great extent the future success of the poultryman. If you expect to make a success of the business, don't be content with scrub stock, and see to it that the stock you start with is of a healthy, strong kind, for upon the parent stock depends the vitality of the coming flock, and eggs from an unhealthy flock will not produce healthy chicks and you will be disappointed every time you try to raise stock from such.

The feeding and kinds of feed has a great deal to do with the health of a flock, and if you expect a healthy, vigorous flock follow a proper system of feeding, for it is an easy matter to ruin a good flock by injudicious feeding.

If you want health give them a feed that will contain all the elements demanded by nature, a balance ration, if you please.

Study and understand the different kinds of feed that you may know which contains a proper amount of protein and carbohydrates and feed accordingly. The feeding continuously of a feed overabundant in fat will cause a number of diseases, such as liver troubles, digestive derangements, etc., as well as to stop the egg supply and the matter of feed is of much more importance than is generally supposed by the average poultryman and should have more thought. Bran, hulled oats, beef scraps, wheat, gluten meal and those feeds high in protein should be fed to the laying hens in

order to increase the egg supply and at the same time keep them in a healthy state.

If you desire to prepare them for market without any danger of disease from overfeeding of improper feed, give them the feeds strong in carbohydrates and at the same time keep them busy scratching.

To aid the digestion do not forget the box of grit, also the oyster shell, which not only aids digestion, but furnishes the necessary properties for the forming of the egg shell and has so much to do with the stopping of soft-shell eggs.

Feed all grain in a deep litter that the birds may be made to exercise and thereby promote health.

I have followed the above rules for several years, using a dry mash that is strictly a balanced ration and produces the eggs and can be fed either wet or dry, and since following this method I have not had a sick bird as a result of digestive derangements (this mash formula I will be glad to give to anyone interested free of charge if they write me, but space does not permit of giving it here with directions).

Keep your roosts clean and the birds and houses free from lice, for filth and lice are ready breeders of disease and birds will not lay and keep in health in a filthy house infected with lice.

Use disinfectants often, such as Zenoleum, crude coal oil, carbolic acid, etc., and you have done much toward the prevention of disease, watch the little things, for it is the neglect of the little details that so often contribute to disease in the flock.

The many diseases found among poultry are very similar to those of man, and the symptoms and treatment are practically the same.

In the diagnosing of disease among the flock one must consider the general appearance, temperature, character of the discharges, position which the bird affected assumes, the action of the bird, and a close watch of the flock. The temperature should be taken with a clinical thermometer placed next to the bare skin and within a fold of the skin if possible. Such a thermometer can be bought for \$1, and every poultryman should have one in his possession, for it comes quite handy for family use and the fact that many of my patients have one has saved me many a cold drive by being able to diagnose and prescribe from temperature and symptoms of the patient, and it will be found just as valuable for the poultry.

The diseases most commonly met with among poultry are Roup, Gapes, Tuberculosis, Lice, Scaly Leg, Chicken Pox, Oviductitis, Worms, Rheumatism and Bumble Foot. As a rule roup is the most common disease among poultry, although I have not had a case of it in my own flock for several years, but I see a great deal of it in others' flocks in my rambles around.

The cause can usually be traced to an overcrowded house, a poorly-ventilated one, or to exposure to cold and rain.

Roup is one of the most infectious diseases to be found among poultry, and great precaution should be used that it does not spread when once in the flock. I have known flocks to be suddenly infected that had been properly housed and cared for and upon investigation found that there had been a bird introduced into the flock that had been previously exposed at home or in the showroom.

The germ from an infected bird is possibly thrown off, dries, is carried by the wind or in some manner to a healthy pen, thereby infecting healthy flocks. Roup is a germ disease of the mucous membrane of the nasal or respiratory tract and of conjunctiva.

The symptoms first noticed are those of a slight cold or an occasional sneeze, a watering of the eyes, a wheezing at

night especially; the bird will select some dark corner and seclude itself there with ruffled feathers, the nostrils become closed by the discharge. If the disease has not been checked by this stage you will find a rapid development of the disease and the air passages filled with a cheesy matter and that very characteristic odor which once scented you will never forget and from which you will always be able to diagnose roup, the comb will become cyanosed, eyes and head swollen, fever becomes very high and the chances are that when this stage is reached that death will claim your valued bird.

The first thing to do upon discovering roup is to isolate the infected bird, put it in your hospital if you have one, and if not get busy and establish one, for at this date all up-to-date poultry plants have their hospital to which all ailing birds are removed and the majority are thereby saved.

Disinfect the quarters which the bird has just left, begin at once to treat the symptoms. If the disease has just started and there is no fever you will find that one of the little sewing machine oilers filled with pure coal oil is a valued weapon; place the tip of the oiler in the nostril, fill the nostril with oil, then the other one, then a few squirts into the throat; this will generally abort the disease, but if

BLACK LANGSHAN.

First prize cock, Chicago, December, 1908, and sire of 1st and 2d Chicago cockerels and 1st and 4th pullets; also 1st cockerel, Buffalo; 1st cock, Madison Square Garden and Scranton, Pa., 1909. Bred and owned by R. A. Hewes, Crete, Ill.

the disease has progressed further than the watery discharge more vigorous methods must be followed and I would suggest tincture of aconite for the fever and for the coryza give one tablet every four hours of quinine $\frac{1}{4}$ grain, camphor $\frac{1}{4}$ grain, morphine sulphate 1-120 grain, atropine 1-4,000 grain, and in the drinking water place 1 ounce of glyco-thymoline to each quart of water and allow no other drink.

This line of treatment has proven very satisfactory to me, as it will to you, or you may use some of the commercial roup cures as advertised in the columns of this paper, all of which have more or less merit. Conkey's Roup Cure is used by many and found very satisfactory and the method is quite simple, as a thimbleful to a gallon of drinking water is all there is to the treatment.

Cholera, of which we hear much and see little (the so-called cases of cholera being nothing more than some digestive derangements), is caused by stagnant drinking water, filthy quarters or is introduced into the flock from contagion from contaminated coops, fowls or utensils.

The symptoms first noticed are that of a watery discharge, like unto diarrhea, lack of vigor, feathers turned up and bird half asleep, the discharges will be streaked with green with more or less blood in the droppings from an inflamed intestine, comb will turn black and fever will be high and rapid and very extreme weakness. The early treatment is a tablet of calomel, ipecac and soda 1-10 grain each every

hour until four are taken, followed by 1 grain tablet of bismuth-beta-naphtha every two hours with creoline in drinking water.

Gapes.—Gapes is a disease of "childhood," seldom seen only in the chicks. Caused by a worm found attached to the lining membrane of the trachea; there are always two or more present and they vary in length from $\frac{1}{16}$ of an inch to $\frac{1}{4}$ of an inch.

The first symptom noticed is that of a hacking cough which develops into a gaping as the irritation increases. Treatment used is the gap worm extractor, which has been very successful as are also some of the inhalant treatments such as "Gap-No-More," which can be procured from dealers in poultry supplies.

Liver Diseases.—The liver of a chicken, like that of man, is one of the largest and most important glands we have to deal with. The liver has control of digestion in that it secretes the bile and brings about chemical changes in the blood. When the liver fails to do its duty you find an enlarged, congested or degenerated liver, either of which will cause serious trouble.

The most frequent cause of liver trouble is an error in diet, lack of exercise or the feeding of an unbalanced feed. The symptoms are those of a whitish comb and wattles, changing to a purple, then black, and if there is obstruction of the bile duct you will find an extreme yellowing of the skin and jaundice, the fowl becomes emaciated very rapidly, there is loss of appetite and diarrhea is present and a subnormal temperature. The treatment is to first "set the house in order," that is, clean up, clean out and keep clean the system, give a teaspoonful of Dorsey's Mixture, followed by a hepatic tablet known at the drug store as Tablet Hepatica Kenyon, and is prepared by the John Wyeth Company, of Philadelphia, and one should be given every morning, noon and night. Give a light diet, such as boiled rice, oatmeal and the easily-digested foods.

Tuberculosis is a disease more often met with in poultry than recognized. This disease is known as going light, consumption, etc. The symptoms are loss of weight, loss of action, a pale comb, a slight cough. Treatment—the ax, as soon as diagnosed.

Lice, while strictly speaking is not a disease, is the cause of as much, if not more, disease among poultry than any one thing.

The first thing I look for upon visiting a poultry yard and being informed there is disease or no eggs is lice, and nine times out of ten I locate them as the cause of the disease or lack of eggs in the basket. You are no doubt familiar with the body lice, the head lice and the little red lice or mite. The body lice is found on the old birds about the vent and on the fluff feathers and is a source of much annoyance. The little red fellows are found on the roosts and in crevices, and only bother the fowls at night, and they do their work well. The head lice is, as the name indicates, found on the heads of the young chicks. The fowls show an uneasiness, are constantly picking themselves, they lose flesh and quit laying and often a setting hen will leave her nest.

Treatment—kill all body lice by using some one of the reliable louse powders; the head lice by applying vaseline to the head of each chick and venus turpentine should be added to the vaseline, the red mites should be exterminated by applying crude carbolic acid to the perches or by using crude coal oil, which can be bought at \$1.50 per barrel.

Scaly Leg.—This disease is of parasitic origin and is very contagious; it is easily recognized and easy to treat with such simple remedies as coal oil or carbolated vaseline; care should be used in using coal oil that none touches the skin, for it will blister, and one more objection to the oil is that it has a tendency to bleach out the yellow legs, which hurts them in the showroom.

Chicken pox.—This disease is not a common one, but when met with is a very stubborn one to cure and is very contagious. The symptoms are the same as in children, and you have all no doubt had a touch of it during your childhood. The eruptions appear on comb and head and around the eyes and there is more or less fever.

Treatment should be to keep fever down and apply a soothing ointment to the papules. A reliable ointment is one composed of petroleum alba 1 ounce, oil eaultherium 30 drops, zinc oxide 10 grains, boric acid 10 grains and carbolic acid 8 drops.

Bumble Foot is nothing more than a bruise caused by jumping off the roost, and is usually found in the ball of the foot, which becomes extremely sensitive and quite often an abscess forms. Occasionally the injury will be found in the knee instead of the foot, but the symptoms are the same. The treatment should be to reduce the inflammation by the application of antiphlegistine, and should this fail and an abscess form a poultice of flaxseed meal should be applied and after it is ripe the abscess should be opened and drained.

WHO'S WHO IN HENDOM

L 5

This summer business of roaming about here and there and wherever your fancy takes you looking for topics to harp on and ideas to carp about has made me very fickle, so the wife says. But I have been reading the July journals and noting how many are left of the men who were in the fancy ten years or so ago and doting over the methods employed by those who have "put" themselves and "stayed put" as household words of hendom. This realm of Hendom is a great country. There are many surprises left in it. New things are constantly being discovered.

But these men who have stayed, they are the ones I am writing about this day and they be few, and the mists of success have hung about them with clinging tenacity. Selah. There are whys and wherefores of these things and you, Reader, want to know them. These monthly visits to the men who are doing things in the fancy should be remembered as we are giving away thoughts that cost the men whom they are recorded of years of work and ceaseless energy.

Browsing along I come to a Hillson, a Fishel, a Rigg, a Northup, some Thompsons, Petersen, Delano-Owen combination, a Duston (upon whom let it be remarked, there is no dust) and others of more or less renown as Hawkinses and Bradley Brotherses, Browns et al.

The Barred Rock idea is something very hard to overcome. Once the germ gets into the blood there is nothing that will save the victim and if he cannot breed them he will buy them and if the avenues of sale are blocked he will run in on the quiet and take them away from you. The Great American Mongrel was the first fowl to get named in the poultry journals, this according to the say of one Smith of Grove Hill. Being the originals and the rock on which the journals were founded they naturally come first in the battles, first in the peace conferences and first in the hearts of the advertising solicitors. Those breeders and fanciers who were caught by the germ, having proven themselves unable to "take" when they were vaccinated, are still by the game and part of it, and draw their daily bread more or less from it, accepting the ups and downs and the ins and outs as if the fates had decreed them to so be ground through the mills of the gods.

Not having been a reader of the journals when the Rocks were breaking into print, I cannot recall the exact status of things. But it must have been correct or the superstructure we now view would not be the masterpiece it is. Those men who now are the luminaries of the Rock kingdom are all men who have pushed their way to the front of the firing line and fought to stay there. Nemises has been on their side all along the way, not because they are favored by the gods but because they have made themselves favored by hard work. These stayers among Barred Rocks can be numbered on the hands, almost. There is Bright-Smith, Hawkins, Latham, Thompson, Hillson, Welles, Bradleys, and we must not overlook the Schwabs. A good many generations of the short term fancier species has come and gone as the rocks of Rockdom have stood the buffets of time and the competition that kills. All along the way they have made milestones in the path of Plymouth Rock progress. All have been working for the same end; all have been striving together for the honors; all have become secure against the attacks of the wolves by devoting their time to the cause. Enthusiasm radiates. These men are all so full of enthusiasm that they cannot get aboard a train else soon it, too, commences to rock.

Let a great show event become scheduled and there you will find them all working to get into the thick of the battle. And after the battle is over they are still making attractive noises about their winnings, not taking it for granted that winnings alone will make their names endure forever as household words.

There is a certain virtue in this that makes for checks and drafts later. To wrap or not to wrap is the question; whether 'tis best for the other fellow to wrap the long green bills with the numerous ciphers about his roll or to wrap them about your own.

The Bright-Smith combination comes by its trust naturally. There is no combination in the first idea that comes to mind when trusts are mentioned, they simply being a couple of men who have the best interests of the breed at heart and considering it their trust to improve the breed as well as they can, doing this one day at a time. The Delano-Owen merger is largely along the same lines, and growing.

Next we come to the Bradleys, plucking nasturtiums, chrysanthemums, azalias, carnations, etc., as they travel the road, open and free, these, of a truth, not literally but "figuratively." It is the long desired ambition of every newcomer to the ranks to aspire for honors such as these folks attain.

Then there is Hawkins, with that eye for the barring and the surface, under color and shape, style and general appearance that put the finish to the bird. He knows in advance that the hottest competition is the best he can enter and generally gets all that he can carry off in a moving van when it comes to prizes and pelf that go with the winnings his birds make.

A gentleman by the name of Latham falls into our text but we leave the gloves off and go ahead and treat him as he deserves, gathering championships with a great line of pullets and gaining glory with a line of superb males.

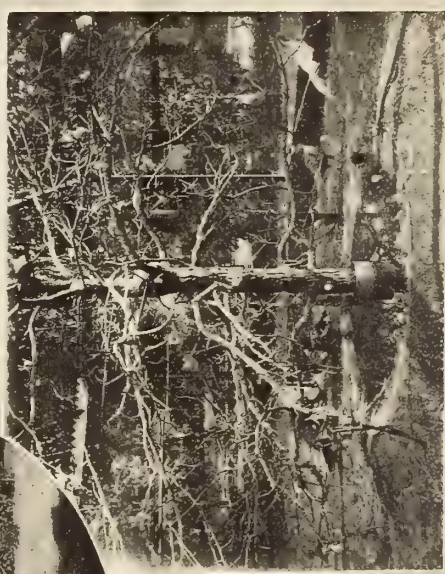

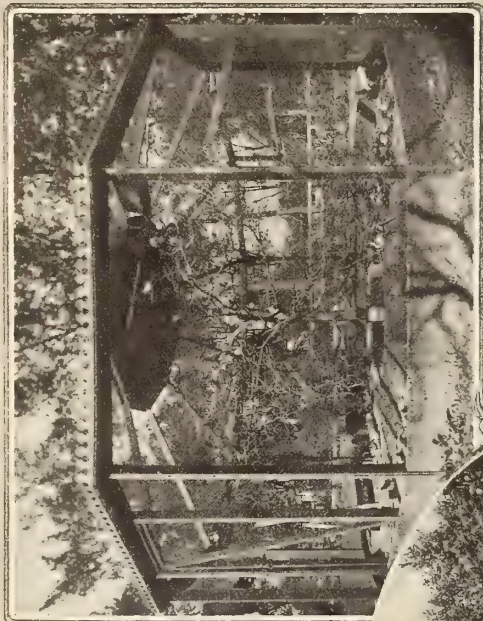

Comes one Welles, the only one in chicken captivity. Was captured after forty days' brisk fighting in the wilderness and from the havoc he has fallen into the habit of making with Fluffy, when he drops her down into the arena in the Rock-orial spectacle, one might not far go astray when he says Charley is not perfectly civilized as yet.

A Thompson now in the vicinity of Amenias, heaves anchor occasionally and sails down the Hudson with a line of eye-openers whatever they are, and the eyes do open for he never misses a show and they say that some of the boys go early so they can see them arrive, be uncouped and then caged.

A Hillson, living just across the way, has been in the game for years and seems not to grow tired. He is a disciple of one of the masters when it comes to decorating the scenery with blue and grayish white. He knows more of Barred Rock history and fiction than others who claim more, so they tell me, and when his book, The Exposures of The Barred Rock Game, comes out he will be busy drawing royalties and signing his autograph in tourists' handbooks.

But the Barred brother was soon followed by his sister, the wee White Rock, and her time among the fanciers entitles her to be recognized as a fowl that has some old timers and wheel horses enlisted in her support. Ever since I can remember, one certain man has been behind them, pushing them to a higher place in the scale of prominence, and devoting all his time to the variety. Mention White Rocks anywhere and there will instantly pop into the hearer's mind the name of Fishel, U. R., of Hope, Ind., and before you have half finished what you are going to say the chances are that your acquaintance will call this breeder by name and tell you of some fancier in his vicinity who is breeding the Best In The World strain.

There is no judge of a five or more shows experience who has not heard of Fishel's White Rocks, and in most every show room that I have ever been in I have seen this strain represented. It means something beside advertising to put a strain of fowls out in the yards of fanciers and breeders so widely. It means effort in striving to please the individual buyer and greater effort in working to produce something better than the other fellow. Mr. Fishel has spent a great amount of time in building up the business he has made, both daylight and lamp-

L.S.

light being called into service. A thousand details must be cared for by the man himself which if entrusted to others might mean a lessening of the prestige that has been built.

There is a note of confidence in all the advertising that Mr. Fishel does. This is largely what has been aimed at to secure the attention of prospective customers. One may order from this breeder with every assurance that he will get all that he has paid for. And it is on this principle that orders are secured. It is safe to say that no breeder in the land gets a greater per cent. of return orders from his customers than this breeder of White Plymouth Rocks. He brought the strain he is breeding to the top and has kept it there and ever has persevered in lifting the variety to the plane it should occupy.

But I almost overlooked the Schwabs. The head of the firm is H. P. He is the one great roamer in the Rock fancy of the East and having at his fingers' tips all the mysteries and the alleged secret compacts and agreements of the Barred Rock trust makes him a great man to keep up the conversation. Let

ter that is wonderfully enhanced by the years of close association with the breed and its breeders. And all this makes for more and better business.

Not to mention Geo. H. Northup as one of the old timers is to pass over a short story that is again worth calling to mind. Mr. Northup had been Minorcas up to the time of his selling out to Mr. Hey, and never will lose his interest in them. In fact, we are now confronted with an article from his facile pen in which he sets forth all the magnificence of the black varieties. It will be just as hard for Mr. Northup to forget the Minorcas as it will be for any one to let decay the sentiments and incidents that have gone to make up a successful breeding career. The one great rock on which all sound businesses are built is the love for that business by the man who founds the Minorcas many fanciers thought he would not be able to build enterprise. Years ago when Mr. Northup began breeding up much of a business owing to the fact that there was not much demand for them and that they were not as popular as some other breeds. Today there are fowls that are not exploited nor pushed by any one breeder and which could be used to make growing breeding businesses that would develop into the same magnitude as the labors of Mr. Northup's.

For instance, take the Leghorn families; any varieties other than the white are not bred in great numbers nor pushed with the energy of a Northup, but it is safe to say they would make just as great breeders' names as that of Northup's were they rightly bred and vitalized in the journals. For years the popularity of the Houdan was kept up by the efforts of Thos. F. Rigg. It was increased, indeed, and today it owes its safety from death as a breed, largely to this man's work. Messrs. Petersen and McAvoy are reaping returns for the labor expended in the cause of more and better Houdans. Nearly every state has its fancier of this breed who stands out as prominently as the leaders in other breeds.

Old timers never began their work in half-hearted channels. They may have at times been discouraged but this fact they have evidently hidden under the proverbial bushel, bearing in mind that shining lights are to be seen, not the lamps with smoked-up chimneys. The hay is maturing under the feet of a good many of us who are so close to the grindstone that we cannot see the edge of the tool we are sharpening. Short term fanciers will be ever with the fancy, but from the ranks that come and go will be found from time to time the master minds that some day are known as old timers in the business of breeding good chickens. Again, selah.

W. E. DWIGHT'S AVIARY.

On the opposite page we present to our readers an illustration of an aviary located on the home grounds of W. E. Dwight, Oak Park, Ill.

Mr. Dwight is an enthusiastic bird fancier and has spent a great amount of time and money in securing rare specimens of wild birds, and his collection consists of over a hundred different varieties, among which are Golden, Silver, Reeves and English Pheasants; Mandarin, Mallard, Pintail, Wood, Blue Bill, Teal, Spoon Bill and Canvas Back Ducks; Moon Face Wild Birds; Shell, Rose Face and Bearded Parquets; Madagascar and Mexican Love Birds; Mountain Song Birds; English Thrush; English Black Birds, English Starlings, English Bullfinches, English Goldfinches, English Chaffinches; Nonpareils; Brazilian Cardinals, Cuban Cardinals, Mocking Birds, Cat Birds, Robins, Cardinal Grassbeaks, East India Rice Birds, and many other rare and ornamental specimens.

These are all kept in the aviary, of which we show different views on opposite page. This cage is 21 feet in diameter, in the center of which is a pond, six feet across, for the ducks to swim in and the birds to drink from. As will be noticed in the illustration, the cage has a "hood" or roof for shelter for the birds. The tree which stands in the center of the pond has a spread of 10 feet and on its limbs are located forty nests, made of wood, coconut shells, etc.

A collection of birds such as this requires a great variety of food, consisting of mocking bird food, grated carrots, canary seed, hemp, rape, thistle seed, poppy seed, sunflower seed and pheasant food; also all kinds of green vegetables.

The aviary is kept outdoors from May 1 to November 1 and moved into the barn during the winter months.

Oak Park, Ill., is located about six miles west of Chicago, and is considered one of the finest suburban towns in the West, and is populated by business men of Chicago. Last spring Mr. Dwight had the honor of being chosen as president of the village board, a position which he is now filling with honor and dignity; but the greater part of his time is taken up managing the extensive business of the Dwight Bros. Paper Company, Chicago, Ill.

INTRUDER V.

One of the unusually fine specimens of the Grove Hill line. This strain has produced within the past few years an unusual number of New York winning males and females. Intruder V was rather unfinished at the last New York show, where he won 4th prize cockerel in the greatest class of birds we have seen and where he with three others won for Grove Hill Yards the grand special for best four cockerels shown by one breeder. In our write-up of the show we referred to him as follows: "A choice, even colored and sharp-barred male. The shade of color and style of barring are the most desirable kind. Good head and grand eyes, legs, etc. We have seen this bird since the show and in his best finished condition. He has more than made good in every particular."—H. P. Schwab.

the gentle zephyrs whisper softly and his ear is strained for the gist of the murmurs. Let a new idea gain his attention and he pursues it to its den and there grapples with it, as a matter of fact. His thirst for knowledge is unquenchable. When you are sure he knows nothing of a certain bit of information, you will find on looking closer into it that he knows all about it and a great deal more than you yourself.

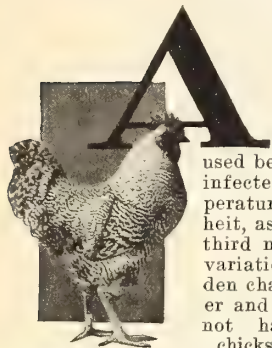

Getting information is just as much in his line as Rocks. In fact to be a successful breeder of them one's line of information must be right up to the instant in its completeness. He must know all the breeders who are in his territory and a more. He must be sure of their weaknesses and their strength. Being fully posted, he can better make his showings and time his comings and goings into and out of the arena that has scarred so many reputations. Feeling the pulse of letters received asking for quotations and other information is an every day mat-

PRIZE ARTICLE DEPARTMENT

We would like to have all of our readers compete for the prizes offered each month in this department. Send as many articles each month as you desire. For the best article we will pay \$3.00 and for the second best \$2.00. Make your communications about a column in length, which is about 600 words. They should be timely and appropriate to the season. Articles describing appliances and houses and accompanied by rough drawings are especially desirable. All the communications must be accompanied by a letter stating that they have been sent in for competition in the Prize Article Department. All articles must be written on one side of the paper only. Articles received after the 15th of the month will be too late for competition in the month following, but will be entered the next month. No manuscript will be returned, but all who send meritorious articles will be given a year's subscription to AMERICAN POULTRY JOURNAL, whether the article is published or not.

The first prize in the contest this month has been awarded to L. W. Loring, West Pownal, Me., and the second prize to Verne D. Rowell, Bryanston, Ontario, Canada.

WHITE DIARRHEA.

A CASE of white diarrhea in my flock broke out in the spring of 1908. My incubator delivered a good lot of chicks on April 1. These chicks were placed, at the age of forty-eight hours, in indoor brooders that had been used before. The brooders not being disinfected. On the second night the temperature went up to 115 degrees Fahrenheit, as found in the morning, and on the third night dropped to 80 degrees. The variation in temperature was due to sudden changes in temperature of the weather and to the fact that the brooders did not have automatic regulators. The chicks appeared smart and did not seem

affected by the changes in temperature. But on the fifth morning many of them remained under the hover. Soon some of them began to show signs of a whitish diarrhea. These chicks would soon become dumpy and others would knock them over, where they would lie and gasp away their life (apparently), or be trodden by the others. Those that remained apparently free from diarrhea all died the same way.

The incubator was set again without being disinfected and hatched 65 per cent of all eggs set. These chicks were placed in an outdoor brooder. On the first night, after midnight, the fire became extinguished and in the morning the temperature under the hover stood at 60 degrees. The chicks came out bright and smart, but on the fourth day began to show signs of trouble and soon went the way of the others.

The next time the incubator was set I put a new burlap in the chick nursery, but did no disinfecting, not realizing that I had something to contend with. This time 75 per cent of all eggs hatched and chicks were put in brooders except a few that were given to hens. During this hatch the incubator temperature did not vary more than one-half a degree. In the brooder it did not vary more than two. But on the fifth or sixth day the chicks began to die and I lost all, although some of them lived to be four weeks old. The hen brooded chicks died the same way, also the hen hatched chickens that were running with them, but chicks a week older did not take the disease. I now saw that I had a contagious disease to contend with, and on looking it up found it to be white diarrhea, so-called.

The incubator had been filled with eggs again. These eggs were now removed and the machine thoroughly disinfected with a good coal-tar disinfectant (I use carbonol) and with sulphur. The eggs were also dipped in a weak solution of the carbonol. More than 80 per cent of all eggs set hatched. Some chicks were placed in a brooder and the rest with hens. Of those in the brooder 20 per cent died, while the loss of the others was but 5 per cent. The reason for this is probably in the disinfecting of the brooder, which might not have

been done thoroughly. The temperature of the hover was kept almost perfectly even, as I had now attached automatic regulators.

The incubator was again set this season on February 21, 1909, having been thoroughly washed in the disinfectant. The eggs were also dipped and the operator was careful to see that his hands were clean before turning the eggs. This treatment has given highly satisfactory results, and 95 per cent of all chicks have been raised to date (July 1) without the remotest sign of the dreaded diarrhea. The last hatch of the season should be excepted from the above.

The incubator was last set May 2. After it had been running five days it was carelessly left open by the operator, five and one-half hours, on the seventh day, and again on the thirteenth day it was left open from 8:30 p. m. until 4:30 a. m. On the twenty-first day 38 per cent of all eggs set hatched, but 80 per cent of chicks died with white diarrhea.

At the same time the above chicks hatched a number of hens came off with chicks. These chicks were kept away from the incubator chicks, but when they were about two weeks old many of them began to show signs of diarrhea and soon died as the others had done. Chicks with another hen hatched a few days later and kept in the same house nights showed no signs of diarrhea.

There are a great many things in my experience with white diarrhea which I do not understand, but I think the germ lies dormant in every chicken and that the right conditions (poor incubating or brooding) will bring it to an active stage when it becomes highly contagious. I feel sure that with thorough disinfecting and proper incubating and brooding there will be but little trouble. Would like to see this subject given more attention by the poultry magazines.

West Pownal, Me.

L. W. Loring.

SUMMER CARE OF POULTRY.

ONE often finds prevalent, more especially among farmers who regard poultry-raising merely as a desirable side-line, the false conception that during the summer months fowls can take fairly good care of themselves. This erroneous idea is largely responsible for the fact that people living in the country not infrequently lose two or three hens every week during July and August.

Too much stress cannot be laid upon the necessity of providing poultry with plenty of cool, fresh water. A serviceable home-made drinking fountain can be obtained by cutting a nick in the upper rim of a tomato can or other upright vessel and placing it inverted and filled with water in a shallow pan, also filled with water, sufficient to rise above the nick in the can. As the fowls drink the water from the pan more will flow out from the can or reservoir, where it is kept cool and clean. Buttermilk is one of the best summer drinks for laying hens and chickens, but should be free from salt. Sweet skim-milk is also very valuable and possesses considerable food value. Boiled skim-milk curds are excellent for young turkeys and chickens.

Either artificial or natural shade should be provided for all poultry to protect them from the burning sunshine. Sun-flowers, shrubs and bushes are very useful for this purpose, or a clump of tall weeds may be left growing in a corner of the farm yard. This will also afford a refuge from hawks and other birds of prey. An artificial shade, although less cool, possesses this advantage that it can be made rain-proof as well as sun-proof.

Also it is well to provide fowls with charcoal and some grit or crushed oyster-shells. A liberal supply of dust is also essential, since a good dust bath is a simple, yet effective way to prevent lice from gaining a foothold in the poultry yard.

Lice are not so much to be dreaded as mites, which are the greatest pest of the poultry house. To prevent them from finding a lodging in the poultry shed or building, the roosts should be erected away from the walls on all sides, and should be frequently kerosened or whitewashed. A little crude carbo-lic acid can with good advantage be mixed in the white-wash. Under the roosts should be sprinkled plenty of lime or dust. Head-lice on small chicks are very harmful and should be banished by the application of a little pure lard or cream. Sulphur is a cheap and efficient insect powder with which to dust the mother hen.

For small chicks at first it is well to feed stale bread crumbs and hard-boiled eggs crumbled fine. Afterwards oatmeal and cornmeal cake, or "johnny-cake," as it is generally called, make good rations for the growing chicks, with wheat or cracked corn added as soon as they can eat these grains. Many people prefer oats to wheat, as a better muscle and bone-forming food, but chickens will eat the wheat at an earlier age.

For young turkeys a successful "menu" consists of stale

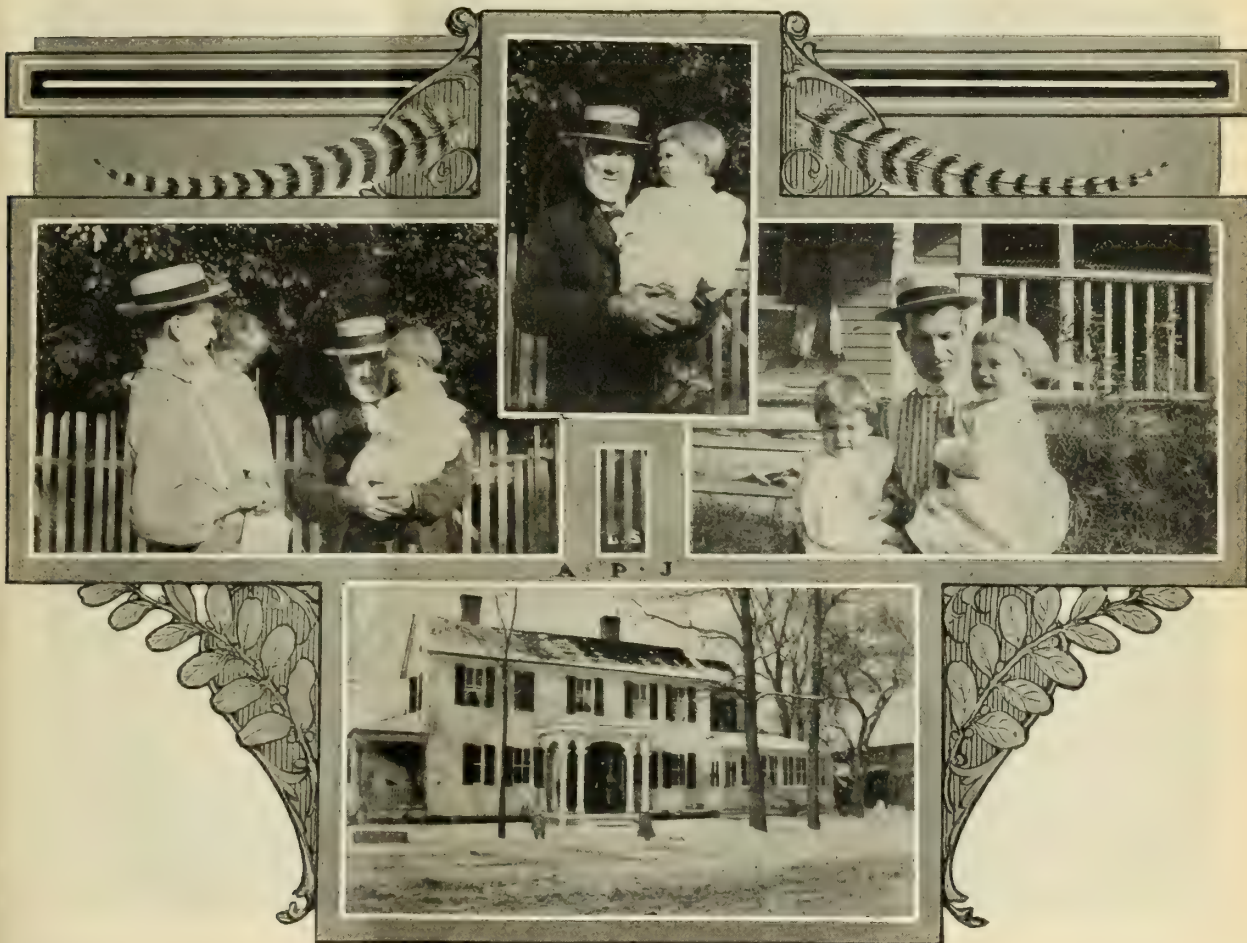

BREEDING STOCK IN HOT WEATHER

Written for American Poultry Journal by Dr. H. F. Ballard, Chenoa, Ill.

A friend of mine who is just starting in the poultry business said to me yesterday, "What do you do with your old breeders, now that the egg season is nearly over? Do you sell them to the dealers?"

Of course a question like that from a breeder of utility fowls alone would be very proper at this season of the year, but to a man who never sells a bird on the market, but only strictly for breeding and exhibition purposes it means much more.

Fowls that have been used through the spring to produce show birds, mated to improve a variety and build up a strain, are too valuable to put "on the market," even though the market price in these latter days mean 12 to 16 cents a pound. Nine out of ten breeders of thoroughbred

Reading from left to right: (1) Victor W. Bradley and daughter, Alonzo Bradley and grandson. (2) Alonzo Bradley and Victor Alonzo Bradley, his grandson. (3) Victor Bradley and his son, Victor A., and daughter, Helen E. (4) The Bradley homestead, Lee, Mass., occupied since first built by four generations of Bradleys. Was the first frame house in that locality. At the extreme right corner of the house is the office of Bradley Bros., the well-known breeders of Barred Plymouth Rocks.

bread (baker's preferred but never feed sour bread), skim-milk, boiled curds and finely cut "pig-weed." The latter is a small weed quite common in Ontario farmyards. It has fine spray-like leaves, small flowers with white narrow petals and a yellow center, and a pungent odor and smarting juice, resembling those characteristics of smartweed, and very painful to the eyes. This weed appears to possess medicinal virtues but some poultry-raisers substitute for it small onion-tops or lettuce. As soon as possible feed the young turkeys wheat or cracked corn also.

All poultry should have as wide a summer range as possible for exercise and feeding. It is not only desirable from the humane standpoint, that poultry should receive adequate care and attention in the hot months of the year, but everything that is done for the comfort of his flock will amply repay the poultryman from the standpoint of economy and financial success.

Verne D. Rowell.

Bryanston, Ontario.

poultry expect to get about as much out of their old fowls as they do for their young chicks. You will see the advice given in farm papers and poultry journals issued especially for market purposes to immediately sell off all old and useless birds to make room for the young chicks. But the fancier considers his old stock worth as much or more than the young, especially in the heavy-weight varieties.

It is well known that hens produce larger and stronger chicks than pullets; in fact, the second year of a hen's life is the best of any age as a breeder, almost as many eggs are laid, the eggs are larger, and the chicks larger and stronger.

Any fancier who is raising Brahmas, Cochins, Langshans, Plymouth Rocks or Orpingtons will decrease the size of his birds from year to year if he sells off all his old birds and keep nothing but cockerels and pullets. This, I think, is a common experience.

This fact being accepted, the question arises, how shall we treat our old birds through the summer, that we expect

to keep or sell next fall and winter for breeding purposes for another year?

July and August are about the hardest months in the year for grown fowls. The two main things to fight will be lice and diarrhoea. The birds are naturally weakened by laying and incubation, and if we allow any one of the several varieties of lice to prey on them they (the fowls, not the lice) will soon begin to droop and die. There are many well known methods of getting rid of the lice, and I will not take time to mention them now; the journals are full of them.

Now, a hen is looked on by too many poultry keepers as simply an egg machine, which is well enough to remember, but we forget that all machines get out of order and wear out, and a hen is no exception to the rule.

A farmer can wear out a self-binder in one or two seasons if he does not know how to run it. A man told me a short

July I reduce it to not more than one-half of the quantity fed from March to April. Any person who has never tried this plan will be surprised how much better your stock will stand the heat, and how much better will be their condition in September, when you want to begin to feed up for the fall and winter shows; and, lastly, another important matter can be brought under almost complete control, and that is the time of moulting. I have seen hens moulting clear up to Christmas, which could have just as well have had a fine coat of feathers by the first of November, or earlier if desired.

The feeding method will do it every time; cut down their feed for two to four weeks before you want the feathers to come off, then gradually increase the feed for a month, until you get them up to full feed. Some say to begin the full feed suddenly, but it is dangerous, don't do it. The other way is safer, and more natural and the only right way.

BUSINESS OFFICE OF U. R. FISHEL, HOPE, IND.

time ago that he frequently reset a hen the second time and he had set them the third time without a rest between periods. Now I consider my hens worth too much to treat them that way, leaving out the element of cruelty entirely.

I have set three or four at once, then tested out the infertile eggs the eighth day, and rest one or two at that time, giving the fertile eggs to the balance, but that is the limit; and that makes a hen set about twenty-nine days. I try never to allow my anxiety to produce chicks to overcome my caution in preserving the life and health of the mothers. I consider a hen already raised worth much more than two chicks only just started.

So instead of forcing the egg and brooding powers of my hens on through the hot months of June and July, I begin to lighten their labors, and it is a very simple matter when you stop to think it over; it can be done entirely by the proper regulation of their food.

No animal (except vermin) needs as much food in hot weather as in cold or moderate weather. So about the first of June (this year about the 10th, as it has been cool lately) I cut off at least one-third of the food. About the first of

A VISIT TO "FISHELTON"

The Largest Exclusive Poultry Plant in the World, As Seen by Our Representative, C. W. Zimmer, on his Recent Visit to Mr. U. R. Fishel

We herewith present a cut showing the interior of U. R. Fishel's office, which is a veritable beehive of industry. We have paid a number of visits to Fishelton at different seasons of the year and always found Mr. Fishel busy. It would seem each time he was just a little busier than the time before, if that were possible; anyway, he is here, there and everywhere, seeing personally after every little detail of the business. And let me tell you, he surely knows how to hustle; anyway, the writer, who thinks he can walk, had to go some in following him about. Of course, we had "Molly," the horse, and drove to the orchard down on the north end of the farm, where many of the oldest young stock were to be found. Now, talk about quality in White Rocks. Well, we saw it here, simply the best ever, and not

one or two phenomenal birds, but hundreds of them, all of them white as the driven snow and having the long back and body so much desired on the Rock. They had size, too; hundreds of them will now weigh five or six pounds. Many of the prize-winners in the coming shows are now in Mr. Fishel's orchard. He has by far the largest flock of young stock, with larger size and better quality, than ever before. The old stock of breeders looked fine and were in the pink of condition. Mr. Fishel does not force his birds, either while young or in the breeding yards, hence they are not all run down when the breeding season is over.

We found many exhibition birds among the old stock, as well as in the young stock. The birds Mr. Fishel is offering in his "Summer Sale" are especially fine and are big bargains. If you breed White Rocks you will do well to supply your wants now from this list.

Fishelton is looking neater and more picturesque all the time, as the fruit trees, shrubs, etc., grow up and the place gets older. Most always when a place begins to get old it is not kept in repair, and so has a run-down appearance. Not so with Fishelton; it is always in perfect repair. We never saw such a well-kept large poultry farm—120 acres—and all the buildings, yards, gates and other nooks and corners takes a watchful eye to keep all this in repair. We have yet to see a fence, or door, or building of any kind on Fishelton that was in need of repairs.

When it is all said and done there is but one "Fishelton" and one "Fishel." He has a knack and system of "Doing Things," and he does them right, not the least of which is producing "Fishel's Best in the World White Rocks," which are certainly close up to the Standard. He not only raises a few show birds, but thousands of them, each year.

Fishelton consists of 120 acres devoted exclusively to producing the "Best in the World White Rocks." The annual output is 10,000 to 12,000 head. Mr. Fishel believes in the colony house plan, and the birds are scattered all over the place. The breeding pens consist of a suitable house with about one acre of fine blue grass for them to range over. The whole farm is well fenced and there is no mixing of birds. The young stock in the orchard and also in the large field have blue grass to range over. No prettier sight could be presented to a poultryman's eye than this beautiful green field with its slightly rolling surface like the gentle waves of the ocean, dotted all over with the little colony houses and the young chicks, white as snow, to be seen everywhere. They were lively as crickets, chasing bugs here and there, and many a lively scramble is to be seen most any time.

Down on the north end of the farm is a woods sparsely covered with trees; here the ground is still more rolling and also covered with blue grass; a creek winds its way in and out among the hills on its way to the sea. Everywhere is to be found White Rocks—strong, vigorous, healthy birds. (We have yet to see a sick bird at Fishelton.) It's no wonder they are healthy, for cleanliness predominates everywhere and the ground has just slope enough to drain well.

A compressed air waterworks system run by a gasoline engine furnishes water under pressure which is piped all over the breeding yards and to several hydrants in the colony house field. Every device necessary to the successful production of poultry is to be found here, but none of the unnecessary paraphernalia is indulged in.

Fishelton is a practical, successful poultry plant and a living example of what can be accomplished with fancy poultry, and what has been done can be done again; furthermore, there is always room for the best at the top.

As we said before, Mr. Fishel is always busy, but he is always glad to see his friends and make them welcome at Fishelton. This article would not be complete without a word about Mrs. Fishel, with her kindly greeting, pleasant smile, always cheerful and ever watchful of her children. Edward is growing up to be a big boy now, and will soon be considerable help to his father.

The writer visits a good many poultrymen's homes during the year, and we see many pleasant, congenial homes, but here is one in which we know that without any pretenses whatever peace and harmony always prevails. We wish there were more Fishels in this world.

SUMMER FEEDING OF POULTRY.

Summer feeding of the poultry is a rather simple process on the average farm, especially where the farmer does not attempt to breed fancy stock, in which case it is quite necessary to pen up the breeders for a portion of the time, which will somewhat complicate the feeding. Where the flock runs at large, as is the case in general on most farms, but little feeding is necessary for the old stock. They will pick up the largest portion of their food and the very kind of food and

in proper proportion to keep themselves in a healthy, vigorous condition for layers and breeders. Except on stormy days it is best to feed only at night, when a good feed will materially assist in keeping up a regular and abundant egg supply. On stormy days when it is impossible for the fowls to get out and search for their food, it will be found advantageous to feed at the least two full meals. This will insure a regular supply of eggs, which cannot be relied upon unless the fowls have a regular supply of feed.

Among the grains most suitable for summer feeding are oats, wheat, barley, buckwheat and kaffir corn, with corn fed sparingly. Too many poultry keepers make the mistake of feeding too much corn in the summer. Corn is a great fat producing food and will often result in many of the older fowls becoming over fat, especially is this true with the medium heavy breeds. Chickens like corn better than any thing else almost, and they need a certain portion of it, not only in supplying a variety but because of its being well suited to their needs, but it is too heating and too fattening for a regular summer ration. I make it a practice to give my fowls one feeding a day of corn, and this a light one and generally cracked corn.

Do not stuff the fowls at any time. It is best to keep them a little hungry so they will forage for the larger part of their food. A system of hopper feeding can be adopted if desirable, in which case the hoppers should be placed under shelter and so constructed that they can be closed a portion of the day if experience indicates this to be the best. Some fowls will not forage much if they can get all they want to

eat without aid, and for this reason it may be found advisable to close the hoppers a portion of the day. It would be best to do this during the morning hours, but whenever it is done there should be a regular time, as regularity has much to do with getting good results from poultry. A good ration for hopper feeding for summer feed is equal parts of ground corn and oats and wheat bran. Animal food and green food they get on the range. A box of grit and oyster shells should be kept where the fowls may have free and easy access to it.

The drinking water is another very important matter to be considered. Proper drinking fountains should be supplied such as can be readily cleaned often, and where they are not only of easy access to the fowls but within easy reach of the busy farmer. Farmers are generally very busy during the summer months and anything that will save time and still produce good results is to his advantage. It is therefore quite important that the drinking vessels be of the proper kind that can be easily cleaned and placed where they can be readily refilled. A regular supply of pure water, as cool as possible, should be given the fowls during the hot weather. They will consume large quantities and unless they have plenty of it they not only suffer, but fall short in the egg yield. When the fact that the egg is largely composed of water is taken into consideration the cause is readily seen. Do not neglect the drinking vessels and, above all, do not compel the fowls to drink from stagnant water about the barnyard. The water thus consumed goes into the egg, and although nature has wisely provided for the elimination from the egg of much of the unsavory elements consumed by the hen, she cannot produce the best flavored eggs from such liquid. Neither does it make healthy meat of the best flavor. A little care in looking after the water supply will produce the right kind of eggs.

Subscription 50 Cents a Year—5 Cents a Copy of all Newsdealers. Chicago subscriptions 60 cents (when delivered by carriers). Foreign subscriptions \$1.00. Canadian subscriptions, 75 cents.

Look at the date upon your wrapper. Many subscribers write to ask when their subscription expires and many complain because we discontinue sending the JOURNAL at the expiration of time for which it is paid. The date when your subscription expires is found on the wrapper each month.

AMERICAN POULTRY JOURNAL is the oldest poultry paper in America. It has a national and world-wide circulation. The best writers on poultry matters contribute to its columns. It receives the patronage and endorsement of the foremost representative breeders of standard poultry and manufacturers of poultry appliances in the country.

Advertising rates are sent upon request.

53,000 A. P. J.'s for August, 1909.

State of Illinois, County of Cook, ss.

J. G. Budde, secretary and treasurer of Regan Printing House, Chicago, being duly sworn, certifies that the American Poultry Journal has contracted for printing and binding fifty-three thousand copies of the August, 1909, issue.

J. G. BUDDE,

Subscribed and sworn to before me this 20th day of July, 1909.

[Seal.]

Harry E. Wright,
Notary Public.

OUR GUARANTEE.

We guarantee our subscribers against loss due to fraudulent misrepresentation in any display advertisement appearing in the American Poultry Journal, providing the subscriber when ordering the fowls or merchandise states that the advertisement was seen in the American Poultry Journal, and places the order during the month or months in which the ad is inserted in our columns and notifies us of the fraudulent misrepresentation of the advertiser, giving full particulars, as soon as it occurs.

Opportunity

The American Poultry Association will meet at Niagara Falls, N. Y., beginning on August 10, for its thirty-fourth annual meeting. The most prominent of the work will be the revision of the Standard, and the action there taken will be our guide for some years to come.

This statement alone should warrant the attendance of every member, for the importance of this meeting cannot be over-estimated. Concerted action at this time will greatly aid to give strength, as well as universal approval, to the accomplishments of this meeting. The indorsement of the action taken, whether in approving or in disapproving the recommendations of the revision committee, is de-

sired by the greatest possible number of members. For this purpose the American Poultry Journal earnestly requests every member to make a special effort to attend.

In our last issue we gave some of our ideas regarding the revision committee's work. We did so for no other purpose than to express ourselves. Our interests, as well as those of all of "Our Folks" in Standard bred poultry, are of equal value, and we shall expect in this a difference of opinion. It is for this purpose only that we plead with all members of the A. P. A. to attend, so that the action, whatever it may be, will have the sanction of the greatest possible number.

The conditions that confront the poultry men today are many. Still, back of all of it is an ever increasing demand for both quality and quantity, so that we can safely face the future with the assurance of success. Some questions will not down, even with the action to be taken. But while the opportunity is offered, it is clearly up to us to act, and to act only in the interests for the greatest possible general success.

The American Poultry Journal will be fully represented by nearly its whole staff, its artist included, and a special effort will be made by the writer to report this meeting in a fitting manner. Headquarters have been secured at the Tower House, where we will be pleased to meet all poultrymen. H. P. Schwab.

Meeting of American Poultry Journal Representatives in Chicago—New Departments

Last month we announced the recent additions to the working force of American Poultry Journal. Our "Field Men" now include Mr. H. P. Schwab, of Irondequoit, N. Y.; Mr. C. W. Zimmer, of Ft. Wayne, Ind.; Mr. A. D. Burhans, of Waterville, Minn., and Mr. L. A. Stahmer, artist and photographer, of Forest Park, Ill. To get better acquainted, these representatives from widely separated sections were invited to Chicago. They looked over the office force, pronounced them all right, visited the great printing plant that turns out nearly three-quarters of a million copies of American Poultry Journal every year, the type-setting, printing, binding, electrotyping departments; were made familiar with our office methods of taking care of subscriptions, advertising, they solicit and send in; art and catalogue work and half-tone illustrating. They were shown subscription records and circulation figures giving them the knowledge to go out among advertisers with the positive assurance of correct circulation statements upon which our advertising rates are based. A reasonable proportion of the time was spent at the necessary but ever joyful task of eating and discussing chicken.

Incidentally a double-header ball game added to the pleasure of the occasion, although the poultry judges in the party claimed they attended it only in a professional capacity of judging fowls and kicking on the decisions.

One of the results of this meeting of American Poultry Journal representatives in Chicago was a closer personal friendship and acquaintance, promoting a good fellowship between these men from widely separated sections of the country. In the serious business of working and living the charm of personal friendship throws brightness into the everyday grind. The poultry shows, associations and specialty clubs help this along. The fraternity

spirit is nowhere better shown among any body of men than among poultry fanciers gathered together. The representatives of American Poultry Journal have a splendid opportunity traveling about the country to meet old friends and make new ones. It is impossible for the thousands of readers of American Poultry Journal scattered all over the world to do this. Even the time of the "man on the road" and at the shows is limited. To promote a better acquaintance among our readers; to keep them posted on current events; to establish a "live wire" connecting all of "Our Folks" in American Poultry Journal with the poultry world, each representative was given space in the Journal. Each month he is to fill a page or more if he wants it, under his special heading, gathering items, chats, talks, personals from the territory he covers, not only during the time he is on the road, but all the year round. Mr. H. P. Schwab in the East, Mr. C. W. Zimmer the Central states and Mr. A. D. Burhans in the West.

We are confident our readers will enjoy each month these special departments from these men who are in close touch with the poultry business.

The Chicago Show For 1909

We are receiving quite a few letters from our readers asking for information in reference to the Great Mid-West Poultry and Pet Stock Show to be held in the Coliseum building, Chicago, December 7 to 12, 1909. Realizing the importance of this show to the poultrymen of this country and desiring to give our readers the most reliable information obtainable, we addressed a letter to Mr. Theo Hewes, Indianapolis, Ind., the secretary-treasurer of the new association, asking for full particulars as to dates, names of members, list of judges and such other information as would benefit our readers. Following is the reply to our inquiry:

Indianapolis, Ind., July 17, 1909.

Editor American Poultry Journal, Chicago, Ill.

Dear Sir: I have your inquiry of July 14, asking for information in reference to the Great Mid-West Show to be held in your city December 7 to 12, 1909. I wish to thank you for the inquiry and am more than pleased to give you and your readers the information you desire. I prepared a short reader for the American that I had hoped to see in the July issue, but find it reached you too late for publication.

Your request for all the facts as to the new association—why it came into the field, what it proposes to do and what guarantee we will make to the poultrymen at large—calls for a rather lengthy letter, but realizing that you want facts, and nothing but facts, I am sure you will be willing to grant me the space necessary to place the proposition squarely before your readers.

The old association, as you and your readers are no doubt aware, was fostered largely by men who were willing to contribute to the success of the show, but who, in the majority of cases were not in a position to give the show the actual time and attention necessary to care for the thousand and one little details that are a part of a great show of this character, any one of which, if neglected, has a damaging effect on the entire exhibition.

It is not fair to say that any member of the old association was lacking in judgment or good intention; it was sim-

ply a case of assuming responsibility that their own business interests would not allow them to give sufficient time to properly manage. As a result, the real work of the show was thrown on the shoulders of two or three willing ones and more expected of them than they could perform, and in many cases these workers were handicapped by rules laid down at board meetings that on their face looked good, but when put to the test were found decidedly faulty.

Judges were employed on their reputation at other exhibitions, but when the classes were assigned to them it was done by men who were not in as close touch with the show work as they should have been. As a result, more than half the classes at the three last shows were judged by men that were in no way fitted to award the prizes on the breeds and varieties assigned them, but the same judges would have done excellent work in some other class that was being butchered by some other judge that should have been assigned to the opposite class. This system being followed for two or three years so discouraged the exhibitors that it came to the point where judging at this show was nothing more or less than a joke and the exhibitors simply took it as a matter of course, and placed but little value on the awards after they were made.

This is the condition that the members of the new association found the show of 1908. There was absolutely no enthusiasm; breeders stood around their exhibits, as one expressed it, looking to see if lightning might not strike his birds with a blue ribbon. No one was boosting the show, but everyone was knocking. The management was crippled for competent help. There was no real head to any department. Coops were in bad shape; some birds were properly fed and watered—others were not. White fowls were placed in dirty cages and the exhibitor's work in fitting them for exhibition thrown away in ten minutes after they were caged and long before the judge had an opportunity to even see them.

It was these conditions that caused a number of prominent breeders to get together and talk over the future of the Chicago show. It was agreed at that time if the old association would give up the organization, turning over to the new association their good will, we would go ahead and put on a down-to-date exhibition in Chicago, guaranteeing to every exhibitor that every dollar of premium money or special of-

fered by us would be paid in full and in cash; that we would coop the show with Empire cages—employ only such judges that we knew were qualified for the work and assign them to such classes as they had previously handled to the satisfaction of exhibitors and critics.

The writer was instructed to act as a committee of one to see what could be done to get the old association to resign the field with the distinct understanding that should the old association decide to stay in we should do nothing to

destroyed our own organization, as all had given up the idea of our getting possession of the territory and when hot weather strikes the poultrymen it's hard to get them enthused until the shows open up in the fall. But I was so deeply interested in the success of the enterprise that I decided to give it a trial, win or lose.

I immediately wrote to the breeders and editors setting forth my ideas and asking that they join in the new deal. The stock was placed on the market at \$50 per share, and within thirty days every share offered for sale had found a purchaser.

The judges selected are: George Burgott, Charles Cornmann, A. F. Kummer, H. H. Coburn, O. L. McCord and W. C. Pierce. There will be one or two more specialty judges added later.

The premiums will be practically the same as New York and Boston. The exact amount will be decided on at the regular meeting of the stockholders at Niagara Falls, August 9.

Following is a list of the stockholders, which of itself we feel is a sufficient guarantee that the new association is worthy of patronage:

Chas. Buschmann,	C. S. Byers,
J. C. Dinsmore,	Henry Dipple,
Poultry Standard,	Reese V. Hicks,
Inland Poultry	Ernest Kellerstrass,
Journal,	A. E. Martz,
F. L. Kimmey,	Chas. G. Pape,
Dan Palmer,	Geo. Rudy,
E. E. Richards,	Wm. A. Stols,
Irving A. Sibley,	A. & E. Tarbox.

Very truly yours,
Theo. Hewes.

Satisfaction and Business

Just how far a breeder should go in making all his customers satisfied with his stock is a matter that rests with that breeder. What guarantees he will make that his stock will be satisfactory have a great deal to do with the amount of business that he will do. A goodly number of breeders are willing to risk their birds by shipping on approval if the buyer is willing to risk the express charges. This is perfectly fair in all cases to the buyer. He should be willing to risk the birds not suiting him and paying the return charges if the breeder is willing to ship the birds on a long journey and accept them back if the buyer so wills it. It is always more or less of a risk to ship good birds and the breeder really risks

Prize winning cockerel, bred and owned by A. J. King, Corunna, Mich.

antagonize them, but drop the matter at once. When I first submitted my proposition it was not met with favor by the old officers, and I had about given up the idea and had written to some of the proposed stockholders that the old association had decided to go ahead, but when the directors finally held a meeting and found what the conditions of the treasury were they decided to give up the show and allow us to enter the field. The final decision was not reached until about May 1 of this year, when I was notified that we might go ahead. The delay had practically

offers special inducements to members of the American Poultry Association and their friends during their attendance at the annual meeting this month : Light, cool rooms and the best of accommodations in every particular : Prices very reasonable
Reservations made in advance : Make your headquarters here during your stay

more than the buyer when business is done on this plan.

Very few breeders want a buyer to keep what he is not perfectly satisfied with. They know that a breeder's best advertising is that which comes from the satisfactory sales. Of a necessity the breeding of poultry must be done on generous lines, especially by the seller, as to stay in the fancy means the selling of stock and repeated orders from customers. The greater number of buyers are men who buy more than once, and their business is worth going after with all one's heart and head. No large poultry business can lean on single orders for its support. Whatever is within reason and lots without the bounds of it, the successful breeder is practicing every season to help make greater trade. We know of some men who have been imposed upon because they were very generous in their treatment of customers, but for the small loss they sustained in such matters they were well repaid in the added amount of business that came their way. One breeder of our acquaintance sold a very choice cockerel this past spring and the bird died in the buyer's hands after about ten days. The seller loaned the buyer a better bird during

the breeding season because the buyer was not able to afford a second bird. Next winter this buyer will be in the market again and we all know where the order will go.

Prices Generally Too Low

There is no breeder who has not thought upon the great increase in the price of grain and cost of producing fowls ready for the shipping crate. One fancier who sends out a number of hundreds of head of birds every year told us, say two years ago, that it cost him about \$3 a head to place his birds in the coops for shipping, this including all the expense but advertising and correspondence. When he received queries for \$3 stock or less he passed them on to some friend who thought he could afford to send out birds at these figures.

The expense of showing, printed matter, advertising, correspondence and feeding, together with housing and cooping for shipment will make a lot of breeders look to their knitting if they knew exactly what the figures were that they were coping with. Very few fanciers know to a cent what every

bird sold cost them to sell. Only those who keep an accurate account of their receipts and expenditures know what prices they can really afford to sell for. In this day it costs good money to keep up a strain or flock to a high standard of excellence. Money and brains cannot be spared if any flock is to grow better every season.

Nine times in eleven the buyer who asks for \$2 stock does not know what good birds are commanding, and expects as much for his money as the man who gives the breeder a carte blanche order for what he wants and then sends the money to pay for it. Utility stock was once sold for \$1 a head, but this was when feed was cheap and lumber cheaper than it is now. Prices of today are higher for good stock because the stock is worth it. The demand for good birds far exceeds the supply and if the prices quoted to buyers are not accepted because they think the figures too high, they should remember before finally refusing to pay what is certainly reasonable, that someone else will pay it and get the birds!

More Accurate Statements

The matter of winning prizes is one that interests every fancier in the country. In our advertising we state that we won certain prizes at certain shows, the name of the show generally being used to indicate the quality of the competition we came out on top of. Where the classes are extra large and we make strong winnings we announce that we won first or third, as the case may be, in a class of thirty cockerels or hens. The number of birds competing against our winner is stated to give a more accurate idea of the quality it took in the winning birds to make the record that we hold up for the public's approval.

This calls to mind that a system of designating the number of birds competing against us would be especially valuable to the breeder who wanted to be stronger in his advertising than he had been formerly. Why not use the following symbols to denote the winning and the birds among which we won our honors: If our cockerel had won second in a class of seventeen at Indianapolis, state it thus, 2. If our

17

advertising of winnings read: At the great Henville show we won this record.

1, 3, 6 cockerels; 4, 5 pullets; 2, 3, 7

14 18 22

hens; 3, 8 cocks; 1, 4 pens; we would

11 9

know that said winnings were made in a class of fourteen cockerels, eighteen pullets, twenty-two hens, eleven cocks and nine pens.

If there has been anything more simple brought out to convey the same idea we have never seen it. Suggestions are in order now and we would like to hear from you.

Call and See Us at Niagara

The headquarters of American Poultry Journal during the meeting of the American Poultry Association will be at the Tower Hotel, Niagara Falls, N. Y., where all visitors are welcome. Give us a call and get acquainted.

Vass' Buff, Black and White Orpingtons

Will offer eggs at less than half their value balance of season. Also all this year's breeders at half their value to make room for hundreds of youngsters. If in need of stock don't delay, as they will go quick. Write for prices. Booklet Free :: C. E. Vass, Washington, New Jersey

Charcoal

Feed your fowls Charcoal; it keeps them healthy and in good condition. Our FREE booklet explains fully how to get better results and larger profits, by feeding Indian Brand Charcoal. Very valuable. Sold 100 lbs. upward. Lowest possible prices for 500 and 1000 lb. lots.

Thomas Bros. Co., 1227 Beach St., Philadelphia, Pa.

WESTERN REPRESENTATIVE
AMERICAN POULTRY JOURNAL

During the fall and winter I will be among the western fanciers and breeders in the interest of the American and can help many of you to plan your advertising and selling campaigns. The American pays its western advertisers because it covers the field. Shall be glad to hear from any breeders who are wanting to enlarge their business this season and will call on you at the leading shows or your yards, where we can confer. I have helped more western breeders to successful advertising than any other man and no matter how small your business it can be enlarged if you can supply the trade. Where it is not possible for you to get good photos I can generally do this for you at your yards or the big western shows. My trips among the breeders will be given in the American and you should write me early if you care to be included. Let me know at what shows you intend exhibiting this winter and at what state fairs you will be able to see me. The interests of the American Poultry Journal are yours and I shall uphold the past standards set by this the oldest and best of poultry journals.

Chick-Chat and Notes

By H. P. Schwab, Irondequoit, New York

CHEER UP.

Weep not for the buried chances;
Errors made in days gone by.
There is hope as time advances
Ever shall be, 'till we die.

Look upon the past as dreaming;
There is work to do today.
View the future, bright and teeming.
Try the smart A. P. J. way.

WHY?

Why do great men leave their footprints
On time's sands: Why? we repeat.
Seems to us they'd last much longer
If they'd leave them in concrete.

Greeting, to all A. P. J. readers and
friends. We will endeavor to make this
department readable and of value.

Have YOU ever read our guarantee to
our subscribers on our editorial page?
Do it now.

Prosperity smiles. The outlook is pleas-
ant to all who have the energy to look
out.

When writing to advertisers, make
mention that their advertisement was seen
in the A. P. J. This is fair play.

The thirty-fourth annual meeting of

the A. P. A. will be held at Niagara
Falls beginning August 10. This prom-
ises to be the greatest meeting in the
history of the association.

The A. P. J. will have headquarters at
the Tower House. Look for the sign
"Welcome" and you won't miss us.

Grove Hill Poultry Yards have given
the artists many opportunities to make
reputations. Note the half-tone illustra-
tion of their Intruder V. in this issue.

Opportunity—who sees it must seize it.
This is the time for poultrymen to seize
the opportunity by attending the A. P. A.
meeting.

Look to your subscription. We wish
it, and it is to your advantage to remain
one of "Our Folks."

This is the Special Sale season. A
great many of our advertisers issue spe-
cial lists. Write for these. It is now
your opportunity to buy both exhibition
and breeding stock at greatly reduced
prices.

Who wants to reduce the weight on
Plymouth Rock pullets, and why? If
there are good reasons advanced, we
would not oppose this, still we are inter-
ested and wish to be shown; so do our
readers.

Mr. A. C. Smith, Waltham, Mass., sec-
retary of the American Plymouth Rock
Club, has matters of special interest to
all breeders of Barred Rocks. Write
him. The club catalogue will be issued
shortly.

The show season will soon be upon us.
The American Poultry Journal offers lib-
eral terms to live solicitors, and is now
prepared to make arrangements for the
coming season. Write for conditions. It
is easy work getting subscribers for the
American.

The American Poultry Journal is
proud of its age. Forty years of service
in the poultry line is a record to remem-
ber. But best of all is its record for
having in all these years been in the lead
with the greatest number of readers ever
attained by any poultry journal.

The Boston show dates are January 10
to 15, 1910. This is an event thousands
look forward to with expectancy that has
always been fulfilled. Arrange to make
this show.

The Poultry Judges' Association will
meet at the Falls along with the A. P. A.
Strong efforts are being made to secure a
proper organization, and to have in this
another advantage to all poultry interests.

What of the RED men? Is this the
quiet before the storm?

The South as well as the East and
West promise to send a big delegation to
the meeting. The general interests are
fully aroused in all sections. The action

to be taken on several questions assures a bumper of a meeting. A large meeting will also assure universal satisfaction.

The Buffalo fanciers are preparing for their third annual show to be held the latter part of January, 1910. They can be depended upon to again surpass their splendid efforts of the past, and to hold a show that is a credit and one that will take its place along with the very best.

Speaking of shows, we believe their real value lies in the value of the awards to the exhibitors from an advertising standpoint. Associations should remember this, and spare no efforts to obtain the best possible competition in all classes.

The Baltimore association is also up and doing, with the veteran George O. Brown in the Pilot House. Their first attempt held last year was one of the best ever pulled off.

The Baby Chick Farms all report an immense business. Conditions keep changing, and the brains of progressive poultrymen are equal to all demands. We believe this part of the industry fills a long felt want. They are making breeders and fanciers of those that could be had in no other ways. Time will find most of these beginners in our front ranks interested in all its branches and seeking only its best.

Standard bred poultry have qualities that are theirs by nature. Others have been bred into them. We want to conserve all these, and in Standard making it will be well for us to make note of this.

Have you seen the latest in the Poultry Show Poster? The American Poultry Journal has a new one fresh from its art department. We think it very attractive. Samples and prices can be had for the asking.

They tell us that a baking house at Buffalo, N. Y., is preparing to place crushed egg shells on the market, and that their supply is nearly three tons per day. Some eggs to this.

We invite our friends to send us news and notes for this department. It is our idea to make this of interest to all readers by keeping them posted on all happenings of the day and times.

In an early edition we hope to illustrate and to tell our readers all about the American Poultry Journal office and printing plant. We think that our size, as well as some of our accomplishments, will surprise you. When we tell you that our last March issue consumed nearly two carloads of paper a line of what can be expected can be drawn from this.

We have been asked by several breeders to state our opinion of line drawing vs. half tones to illustrate the Standard. Either one at its best would answer the purpose. We would not consider the cost of either in order to supply the one best adapted to the purpose of showing the ideal in perfection to the beginner, under some certain conditions. The line drawing can readily be made an ideal by the study of the Standard shape. The half-tone would surely fail in some respects unless touched up. In this the best we have been able to attain is a 93 to 95 point bird which can hardly be adopted

as ideal when the aim is perfection of 100 points. The missing points would have to be supplied.

We believe an error has been made in allotting only certain work to each artist. This work should not be divided in this manner, if we wish to secure the BEST. It is a well-known fact that certain artists excel on certain varieties. Equal amount of work should not rule, but quality prevail, and each subject should have the careful attention of two or more of the artists in competition to secure the best, and on these terms only should the work be awarded.

The cost of illustrating the Standard amounts to upwards of \$5,000. The American Poultry Association is not in financial condition to pay such costs very often. We want the illustrated standard; we want the best of everything for the poultryman. But we also wish them to receive their money's worth, and something to show for it besides a depleted treasury.

Hark! Think we hear the toot of the "Ringlet" auto now.

Now is the time to look forward to the show season. Begin now to feed and to condition. Every little helps, and the success attained will warrant all possible care. Proper conditioning spells winnings.

Dave Nichols will be there, and rumor has it that Charlie Welles will accompany him. These spell-binders of the East will receive a hearty welcome. Wonder if Charlie will again have to post his hat and purse to secure his return.

What will the harvest be? With the best of prices for eggs and poultry, we look for the next government report to touch close to the \$600,000,000 mark, and that is also some.

Charlie Latham missed the last meeting, but we have hopes of seeing him there this time. His every interest is now centered in his poultry, and from last report it is great business. The echo of that Boston sweep is still on us.

The early season was not of the best for poultry, but conditions improved, and satisfactory reports are the rule. The quality in particular promises to be of the best.

We believe that arrangements have again been made for reduced railroad fares to the Falls and return. Your ticket agent will know. Ask him.

PERSONAL MENTION.

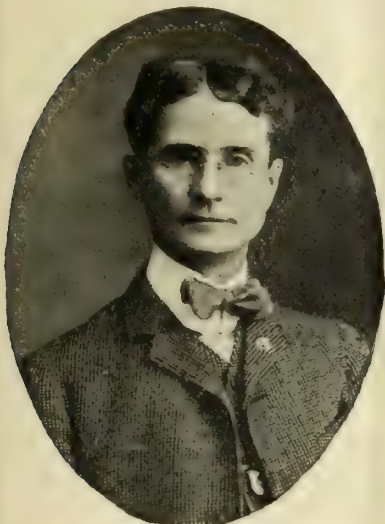

We call attention to the special sale ad. of E. B. Thompson, Amenia, N. Y., offering "Ringlet" Barred Plymouth Rocks at bargain prices. We advise all desiring to purchase Barred Rocks to send for a copy of this special sale list, in which is described both exhibition and breeding birds to suit the needs of all customers. Mr. Thompson is the originator of the world renowned "Ringlet" strain and is in the front rank as a breeder of the highest class Barred Plymouth Rocks.

A number of the boys have signified their intention of stopping at the Tower Hotel during the A. P. A. meeting. Better join the crowd.

Subscription Department

A trip through the entire United States can be taken for a one-year's subscription to American Poultry Journal, of course, not a personal tour but one equally as interesting.

This is our latest proposition—to our subscribers. Send us a one-year sub-

A. J. KING,

Winner of the 9th prize on our 10th annual subscription offer.

scription to American Poultry Journal, at 50 cents and we will send you free a set of 50 beautiful colored postal cards, which will bring you every point of interest in the United States. Beginning at New York city, the series of postals show you every point of interest up to the Pacific coast. Complete description of the trip will be found on another page of this issue. Be sure to get a set of these postals, which are given absolutely FREE.

Also do not forget that our great subscription contest for the Fall of 1909 will open next month, and will continue until December 31 of this year. If you desire to earn a liberal commission and also secure a number of valuable prizes, send us your name and address at once and we will mail you the necessary supplies and a copy of the offer as soon as the contest opens. Do this today, so that you will be "on deck" when the big show begins.

We are receiving numerous letters from our agents, expressing their gratitude and thanking us for the fair treatment they received, and in justice to you, as well as to ourselves, we are publishing herewith some of these letters and hope that we will be able to satisfy many more on our Fall contest, and that the reader will be one of those.

The following letter was received from Mr. A. S. Johnson, winner of the second prize (\$100) on our last contest: Montclair, N. J., July 2, 1909.

American Poultry Journal Publishing Company:

Gentlemen: Received your check for one hundred dollars (\$100) premium for second prize, for which I wish to thank you.

It is certainly very nice to get one hundred dollars extra besides commis-

sions, and I assure you that it is appreciated by me.

Yours truly,

(Signed) Arthur S. Johnson.

Mr. Johnson is a breeder of Cornish Indian Games and Rhode Island Reds. He took subscriptions for American Poultry Journal in his spare time and devoted only the last week of the contest entirely to subscription work. Mr. Johnson deserves a great deal of credit for his work and we feel that the \$100 cash he received as second prize was appreciated.

Mr. W. S. Manning, winner of the forty-sixth prize, writes as follows:

W. S. MANNING.

Winner of 46th prize on our 10th annual subscription offer.

June 27, 1909.

American Poultry Journal Publishing Company:

I received your two books, "Why Poultry Pays and How to Make it Pay" and "How to Build Poultry Houses," which I consider, in my judgment, a very profitable present, and thank you for same. I am a conductor on the B. & L. E. R. R. and I have been so busy this spring that I didn't have time to do much canvassing.

Thanking you for past favors, I remain, as ever,

W. S. Manning.

P. S.—I also wish to thank you for the nice comb and brush set. I consider we are more than repaid for all we done.

Yours respectfully,

Mrs. W. S. Manning.

Mr. Manning sent us only two lots of subscriptions, which he picked up in his spare time, of which he has very little, and we thank him for the inter-

est he has shown in American Poultry Journal, even when handicapped by time.

Mr. A. J. King, of Corunna, Mich., is another of our satisfied friends. He won ninth prize in the contest, which closed June 18th, and writes us under date of July 6th, as follows:

Corunna, Mich., July 6, 1909.

American Poultry Journal Publishing Company, Chicago, Ill.:

Gentlemen: Yours of the 21st to hand, and upon reading the same I was very much pleased to learn I was lucky enough to be placed as number nine in the hot contest of the American Poultry Journal for 1909, and on July 5th I received a fine \$22 Cyphers Incubator as reward and premium for my prize. The incubator arrived in good condition and very prompt after the contest closed.

I must say the American Poultry Journal has been very kind in every respect all through the contest and very prompt in all correspondence and has lived up to their agreement to the letter.

I shall continue to hustle for the American Poultry Journal subscriptions and am a firm believer in your fair dealings.

I will say I only devoted my spare time, and am sure I could have made it 400 instead of 182 if I could have devoted more time to taking subscriptions.

Again thanking you for your many past favors, I beg to remain,

Yours very truly,

A. J. King.

Mr. King is a breeder of fancy White Wyandottes, and has many winnings to

ARTHUR S. JOHNSON.

Winner of the 2nd prize on our 10th annual subscription offer.

his credit. He sent us the photograph of his White Wyandotte Cockerel, which won first prize at Saginaw, Mich., last winter, at which show he also won second on pullets.

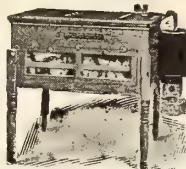

It is a pleasure to have such a breed-

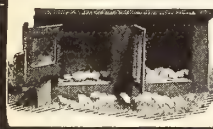

SINGLE-COMB BUFF LEGHORNS "Best General Purpose Fowl on Earth." Light Eaters, Healthy, Hardy, Large Winter Egg Producers, Choice Eating, Handsome, Attractive. **WINNERS—NEW YORK, CHICAGO, MILWAUKEE.** Ten Breeding Pairs—extra value—\$15; Fifteen Breeding Trios—extra value—\$10; Ten Breeding Trios—extra value—\$15; Ten Doz. Utility Females, per doz., \$15; Eggs, per Setting, \$2, \$3, and \$5. New Mating List on request. Handsome Catalog (colors), 6c post g., tells "how." **F. A. Tecktonius, Route 7, Racine, Wis.**

The Incubator YOU Want is the One that Hatches the Most "Livable" Chicks

It makes no difference to you on what principles a machine hatches—BUT it does make a difference how many "livable" chicks you get from each hatch. It is very discouraging to find at the end of the 21 days that from $\frac{1}{2}$ to $\frac{3}{4}$ of the chicks are "dead-in-the-shell" and a few days later to have "white diarrhoea" carry off $\frac{1}{2}$ the remainder. The trouble is **improper hatching**. What you and every other buyer of an incubator wants is a machine that hatches chicks that live. When we tell you we have that incubator we don't base our claim on theory or guess-work, but instead on actual, practical results already obtained by those who are operating our machines. For instance read Mr. Leon L. Hough's letter. We have hundreds just as strong:

Prairie State Incubators and Brooders

work on a different principle than any others. They copy nature almost to perfection. That's why they not only hatch more chicks and raise them, but why they hatch bigger, stronger chicks—chicks that live and incidentally they are the kind that bring you profit. You will be interested to learn how they do this so successfully. Our 1909 Catalog tells the whole story. It's free.

PRAIRIE STATE INCUBATOR CO.,
468 Main St., Homer City, Pa.

12,000 Big Strong Chicks

Were hatched by me in Prairie State Incubators during April, May and June this year. The hatches averaged better than 90 per cent and went as high as 98 percent. These chicks were shipped as far as 2,000 miles with only 7 reported dead in the whole 12,000. How is that for vigor? Leon L. Hough, Canisteo, N. Y.

IMPORTANT.

Have you read our Guarantee on the Editorial page? It has been there for years, and means all it says. We shall keep it there. We only ask that at all times when writing advertisements you make special mention that you saw this advertisement in the A. P. J. This credit is due us, and all interests can best be served in this way. After all it is only Fair Play.

er as Mr. King take subscriptions for American Poultry Journal, as it shows that he is a breeder who not only produces winners but who believes in "boosting" the poultry industry by devoting his spare time to the work of getting subscriptions to the oldest, largest and best poultry publication in the world—American Poultry Journal.

Now, Mr. Reader, you have read in the foregoing lines what our friends and promoters of the poultry industry write us. We have a large number of letters on the same order which space will not permit us to publish in this issue. Everyone who sent us subscriptions on the last contest were more than satisfied with the commission and premiums they received, and besides have the self-consciousness of having helped a good cause—the poultry industry.

We want you, Mr. Reader, to also contribute your spare time to the work. We want you to help us increase the fast growing poultry industry. We need more real poultry fanciers in this country and you can help the cause by soliciting subscriptions for American Poultry Journal in your spare time.

Remember our great fall contest will open next month and we give commissions and grand prizes to our agents.

Send your name today and get in on the ground floor of this great contest.

JUDGES' ASSOCIATION.

The larger majority of judges are agreed that this association is timely; that now is the most opportune time for their organization. There will be thirty-one more names proposed, to which the A. P. A. will grant license this month, these to be added to the 150-odd who now hold license. Another year no doubt will bring up as many more. Each and every one of these nearly 200 formulated a system of their own, in part, from the study of the Standard, observation of how others did it, as they interpreted the meaning of the Standard, many from a close study of what the best breeders have produced of the many varieties given recognition and brought to the exhibits at fall and winter shows; others by practical experience with numerous varieties. None are perfect in doing their work of judging all varieties, no matter what their natural or acquired ability. Consequently the annual fault-finding, just and unjust criticism by the knowing and ignorant, and sometimes by the short-sighted critic who is privileged to don the duster and hopes to boost himself by discrediting the work of another. The judges organized into an association is not going to eliminate these faults, or all the petty jealousies, spite and envious criticisms, but will minimize these expressions of weakness.

A fraternal spirit develops when two or more meet, and they exchange views and freely express themselves on all topics relating to the study of fowls, the interpretation of the law, which is the Standard; their individual views and interpretations of features of shapes and color met with in different specimens which are not mentioned in the Standard, yet must have judgment passed on them, that in as near a measure accords with what is a fair valua-

tion and a just cut. The uniform work of scoring will not and cannot come about by making a set of rules that each judge is to conform to like a machine cutting a stone, but there are many features mentioned on pages 29 and 30 of the Standard where "cutting for defects" could be much more uniformly done than now by the exchange of views of the fault under consideration, an annual conference with a sufficient number of Standard fowls to handle, score and discuss, would be of great educational value to old and new judges.

The poultry judge must be able to comprehend in the broadest sense all that the Standard contains as law between its covers, his display of knowledge of its contents is proven when practically put into operation in the show room; it is then that the experienced breeders judge the judge, which makes him or relegates him to a back seat as incompetent, hence his license (without a practical, logical and common-sense application when passing judgment on Standard poultry) will not keep him going forward, but compel him by close study and a cultivation of every developed and latent faculty of his mind to concentrate his efforts to learn all factors that make a successful and competent judge.

Judges are doing educational work on the value of which thousands invest their money from which to reap a reward in the showroom. The poultry fraternity has drawn into its ranks men and women from all walks and conditions of life. Brains, honesty and competent work are in demand; organization is the order of our times; hence a body of educators without proper organization stand in their own light and cannot promote the welfare of themselves individually or the fraternity, unless they do organize, and by united effort push their work on to higher platforms where more efficient work is accomplished and the confidence of the poultry public attained.

D. T. Heimlich.

S. T. CAMPBELL.

The newly elected secretary-treasurer of the American Poultry Association was born near Richmond, Va., a little more than fifty years ago. His grandfather, a native of Scotland and a cousin of Alexander Campbell, founder of the Christian church, came to the Old Dominion from Montrose, on the coast of the North Sea in Scotland. Alexander has been a familiar name in the Campbell family, having been carried down from many generations, the father and son of the new secretary bearing the name Alexander.

Dating back to the days of the Shanghai fowl S. T. Campbell has been a chicken fancier. He comes by this naturally, as his mother and father were both interested in and breeders of poultry. For the past dozen years Mr. Campbell has devoted all his time to poultry, having a small farm, most of which is located within the city limits of Mansfield, Ohio. Here comfortably located in a modern home, surrounded by shade, fruit trees and flowers and overlooking the city, may be found a well equipped poultry ranch which contains within its yards some of the choicest specimens of Rose Comb Minorcas and Columbian Wyandottes.

As three grand trunk lines of rail-

roads pass through this beautiful city of 25,000 people many travelers take advantage of the opportunity and stop over to visit Montrose, where they find at all times the latch string hanging on the outside.

Mr. Campbell joined the American Poultry Association at the Washington, D. C., meeting in 1896. Here he cast his first vote for George O. Brown for president and D. Lincoln Orr for secre-

S. T. CAMPBELL

tary-treasurer. At this meeting were present those mentioned and Sidney Conger, H. V. Crawford, J. H. Drevenstedt, James White, P. H. Jacobs, Theo. Hewes, H. A. Bridge, Sharp Butterfield, F. J. Marshall and others of the old guard.

Mr. Campbell has always taken a

Contrast a dried out, weather-worn strap from a harness ignorant of oil, with the soft, glove-like springy quality of leather oiled with

EUREKA Harness Oil

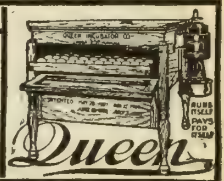

Think how much better the leather looks; how much easier it is for the horse; and how much longer it will wear. Nothing like "Eureka" Oil to make a harness soft and black. Ask your dealer.

Box C, Long Island City, New York

deep interest in A. P. A. affairs. At the Cincinnati meeting in 1906 he was a strong supporter of the measures leading to the adoption of the new constitution. After the resolution calling for the selection of the committee of fourteen was prepared Mr. Campbell was selected to offer this set of resolutions to the members present, and it was unanimously adopted. It was at this meeting that the A. P. A. took on new life and ever since has progressed.

It was at New York in January of the present year that many of the active members of the A. P. A. requested Mr. Campbell to stand for election to the office of secretary-treasurer. Mr. Campbell was not a candidate and did not until after mature deliberation consent to the use of his name.

Having served on the executive board, both under the old and the new constitution, he is familiar with the A. P. A. work and as proven in the past by his efforts will be active and progressive in the office to which he has been called.

Mr. Campbell at the present time holds the following positions of trust:

Member of executive board, American Poultry Association.

Member of executive board, Ohio Branch Poultry Association.

Member executive board, International Association of Instructors and Investigators in Poultry Husbandry.

Poultry Commissioner Alaska-Yukon-Pacific Exposition.

Instructor of poultry culture, Ohio State College of Agriculture.

Vice president National Columbian Wyandotte Club.

Member Rhode Island Red Club.

Mr. Campbell will assume his duties as secretary-treasurer of the American Poultry Association as soon as his election is approved by members of the A. P. A. at the meeting in Niagara Falls on the 10th of this month. We predict for him a successful administration during his term of office.

PROGRESS IN CUBA.

With the beginning of the present fiscal year the Republic of Cuba established a Bureau of Information, President Gomez appointing Leon J. Canova, an American newspaper man, who has resided in Cuba eleven years and has a wide acquaintance with the Island, as its director.

Parties wishing information of any nature concerning Cuba can obtain same, free of charge, by writing to Leon J. Canova, U. and I. Bureau, (Utility and Information Bureau,) Department of Agriculture, Commerce and Labor, Havana, Cuba.

Don't forget to register at the Tower Hotel, Niagara Falls, N. Y., when you attend the A. P. A. meeting this month.

G. M. King, 935 South Queen street, York, Pa., a well known breeder of Barred Plymouth Rocks, starts a yearly ad with us this month. Mr. King is without a new man to many of our readers, but is by no means a new advertiser, as he has been with us before and has been breeding fowls for many years. If you are looking for something good in Barred Rocks, you should correspond with him now, and secure the cream. When writing mention American Poultry Journal.

Mrs. H. E. Blatter, Solon, Iowa, breeder and judge, informs us that she has a few choice dates left and would be pleased to hear from show secretaries in need of a judge.

THOROUGHBRED GAME FOWLS.

An Old Breed That Wants a New Place
—The Several Standards and
Their History.

Written for A. P. J. by Dr. H. P. Clarke, Indianapolis

Several years ago there appeared in American Poultry Journal a little editorial on the misuse of the word "thoroughbred," showing that it was by no means synonymous with "pure bred" nor with "standard bred." Now permit me to call attention to the fact that the term is here properly applied to the fowl known in Great Britain as "Old English Game," that this noble bird of ancient lineage deserves a place in our Standard of Perfection, that it has fulfilled all constitutional requirements of the A. P. A. and that admission will be sought at the coming Niagara meeting.

The thoroughbred game is one of and comparison of ideas, participated in the most popular breeds at all British shows. It is quite a favorite in Canada, Australia, South Africa and other English-speaking countries. It is recognized by the Poultry Club of England and has a standard for judging, which standard is derived from and founded upon our own. But where is ours? We have no official standard, simply because the American Poultry Association is more than twenty years behind the times.

Let us look a little into history. The first attempt at a standard for judging thoroughbreds was made by myself in Game Fowl Monthly, June, 1886. After considerable criticism, many suggestions by B. N. Pierce of this city, T. B. Dorsey of Maryland (both since deceased),

and several other breeders, fanciers and judges, the standard was redrawn and published in Game Fowl Monthly, November, 1886. That was the standard which was furnished to John Barton, secretary of the Wigton show in March, 1887, and from it was drawn the first English standard by James

ORNAMENTAL GAME.

Henderson (Game Fowl Monthly, July, 1887), which later became the official standard of the Old English Game Fowl Club, though subsequent revision departed somewhat from the American original.

When the A. P. A. met here in 1888 the Thoroughbred Game was admitted and the above mentioned standard was adopted. Then, at the very last session

of the meeting, after the Thoroughbred Game men had gone home, Mr. A. C. Ficklin, a successful breeder of Ornamental Game in those days, moved to reconsider, persuaded the remaining members that the admission of the thoroughbred would be detrimental to the interests of his pets, and finally succeeded in throwing out the thoroughbreds entirely.

For twenty-one years the matter lay dormant. Now, after again taking it up and fulfilling all constitutional requirements on our part, we find that the secretary-treasurer forgets to send out the sixty-day notice as required by A. P. A. constitution, Article XI, Section 2, d. Wonder what will happen next?

Arthur Trethaway, Wilkes-Barre, Pa., the noted Black Minorca breeder, has gone to England to look over the Black Minorcas on the other side and see if they have improved during the past twenty years. They will certainly have to be good if he brings any back with him, as his Anthracite strain of Rose and Single Comb Black Minorcas are well up at the top.

The Tower Hotel, Niagara Falls, N. Y., has made special arrangements to accommodate members of the American Poultry Association and their friends during their stay at Niagara.

Residents of Oak Park complain that the suburb is being transformed into one vast poultry yard. What a fowl insinuation!—Chicago Record-Herald.

A good "motto" for the poultryman is "Do it now."

THOROUGHBRED GAME FOWLS.

(From plate by Ludlow.) Show reports of the United States and Canada indicate that in numbers exhibited Thoroughbred Games exceed Ornamental Games by at least five to one. The Ornamentals are in the Standard. Let us put the Thoroughbreds in too, at Niagara, August 10.—H. P. Clarke.

It pays to get eggs from birds that have been bred right.

Eggs now one-half price. Circular free. W. H. Wieleke, Box 348, Ft. Wayne, Ind.

"Birds of Quality"

The Gold Medal Strain of Buff Plymouth Rocks—Originated and Bred by S. D. Lapham, Dearborn, Michigan

On our way to Chicago to attend a meeting of all the representatives of the A. P. J. we stopped over one day at Dearborn, Mich., to spend one day with S. D. Lapham, to see his place and birds, and to renew a friendship of years standing, all of which we greatly enjoyed. There is much to see here to interest the fancier, the Buff Rocks, of course, being the feature, closely followed by the Pheasantry, and the 100 or more hives of bees on the place, a sight that was new to us.

The Buff Plymouth Rocks have years ago, through merit alone, won their place in the fancy, and as we find them today, pure in color, and breeding as true to shape as any variety, we don't wonder

have these ear-marks plainly stamped on them. The number of birds used varied from four to seven or eight. Individual merit alone regulated the number of females to the pen, and where we find this system used, as we did here, results are obtained.

We had the pleasure to see and handle most all of Mr. Lapham's noted winners, and also handled several of his breeders, the evenness of quality in all of these being very apparent. The head points of the males and females are a prominent feature, their average very high, and as good, we thought, as can be found on any flock of Plymouth Rocks.

Something over 1,000 young are here to be seen, from the tiny chick of a few days to the early hatched one of size and weight at from four to five pounds, birds that will prove the winners at the early shows, and, as Mr. Lapham stated, "I can supply winners from September to March—birds that will be at their best condition for any date of the show season."

Mr. Lapham is a Buff Rock specialist from every view-point, his real interests are in them. Still he has some other likes and fancies, all that is beautiful. He has lately completed a pheasantry, which we hope to illustrate shortly in the A. P. J. Here are bred seven varieties of pheasants, in the most approved natural way. Here are also found the beautiful Mexican quail, the first we have seen, a game bird of rare beauty, also a few varieties of ornamental Bantams. These Bantams belong to the boys, of whom there are two, with every promise of following their father in the fancy. A flock of White Holland Turkeys and a grand collection of Toulouse Geese are also here. We were surprised at the size of both old and young. Mr. Lapham has won well with these at Detroit, Chicago, etc.

The Dearborn Poultry Yards, as this place is known, comprises several acres of land. There are several large breeding houses, used mainly for winter quarters, and close to twenty double colony houses, set in line, and each has extra long and wide runs. These are well sodded and planted to berries and fruit. We could not improve on his arrangement if we tried to. All is complete and in the best possible condition. The engine house, with a 10 H.-P. engine and a 30 H.-P. boiler, with its cooking and grinding department, completes this plant. Another feature is the whitening and spraying outfit, arranged on trucks, with a gasoline engine and a barrel it is drawn from house to house. They are all white-washed several times a year and are sprayed every week. The value of cleanliness can be seen here.

Mr. Lapham has been one of "Our Folks" ever since he began breeding poultry, and for all the years we have known him, we have admired him both as a man and friend, and for all that he has done for Standard-bred poultry interests.

H. P. Schwab.

The prices are reasonable and the accommodations first-class at the Tower Hotel, Niagara Falls, N. Y. Bear this in mind when you attend the A. P. A. meeting on the 10th of this month.

The above is a correct likeness of Judge J. C. Johnston, of Petersburg, Ill., one of the new judges who has "made good" in the harness. Owing to his persistent study of the Standard and its requirements, and conscientious application of the same in making awards, he has been re-engaged at every place he has officiated. Mr. Johnston has some good dates open for the coming season, and would be pleased to hear from those desiring his services.

at the popularity they have attained, and that their future, with the combined quality of merit, and truthness in breeding, is most promising for them.

The black tails, so common in this variety only a few years ago, have been laid away; so have the chestnut tails. Sound color has superseded all color defects. The color of the Cochin has been attained, if not surpassed, and the result is a bird of wondrous beauty and merit combined, that will always find and hold favor.

Mr. Lapham, as stated, is one of the first breeders of the Buff Plymouth Rocks. His work for the variety has been long and earnest, and the success he has attained should be a great satisfaction to him. While at this time (July 12) several of the yards were broken to some extent, by broody hens, enough could be seen to assure us of their make-up, and the quality and care Mr. Lapham uses in all his matings. To produce quality is his one purpose, and all the matings here

Little Rays of Sunshine

By C. W. Zimmer, Fort Wayne, Indiana

AS THE PHOTOGRAPHER SAYS, "LOOK PLEASANT, PLEASE."

No doubt you have heard the story about the parrot who, after he had got a beating from his master, got out in the back yard and got hold of a chicken (a Barred Rock, I think) and, while choking it to death, said, "Smile, d—n you, smile." Anyway, it pays to look pleasant, have cheerful thoughts and you will see many more beautiful things in life. You will be happier and better yourself and you will make those you come in contact with happier. They in turn, because of you, will smile on others, making them happier. It is an endless chain. Do you realize how much power you have for doing good? Better begin today and you will have made this world better for your having lived. Isn't that a pleasant thought? You will leave this world better for your having lived. Begin today by being pleasant to all, especially those at home. It costs nothing and you will have the self-consciousness of "doing good."

* * *

That best portion of a good man's life is his little, nameless, unremembered acts of kindness and of love.

* * *

We sow an act and reap a habit. We sow a habit and reap a character. We sow a character and reap a destiny. Get the "habit" of "doing good."

—o—

WHAT WOULD THE VALUE OF ALL THE EGGS IN THE WORLD BE?

The people who raise poultry for eggs alone, principally the farmers' wives down in Marshall county, Oklahoma, receive \$400 per week for their eggs; this is \$20,800 per year that is brought into the county by the industrious hen for eggs alone, figured at only 13 cents per dozen.

Sounds pretty good, doesn't it?

But out around Petaluma, Cal., is to be found the most eggs of any one place in the world. The hens around there produce eggs to the value of \$475 every hour for ten hours a day; this amounts to \$33,250 per week, or \$1,328,201 in a year. These figures do not include any of the eggs used for hatching or consumed at home, but only those that are shipped. These eggs laid end to end in a direct line would reach from Petaluma to Chicago. Their combined weight amounts to 79,562,951 pounds, or 34,281 tons.

We are also informed the United Baking Company, of Buffalo, N. Y., use enough eggs every day that the shells which they have left weigh three tons. Think of it, three tons of egg shells per day! It is almost impossible to even imagine the quantity of eggs produced in the United States, and still we have to import lots of eggs. A lot of them come from China and some even from Japan.

Don't you think there is room for you and some of your friends to engage in the poultry business? Better suggest this to some of them.

It is light work, pleasant, and profitable if you like it and conduct it along practical lines, giving it the same care

ful attention any other successful business requires. You are sure of success. Others are succeeding, so can you.

PUT YOUR LIFE INTO YOUR WORK OR YOUR WORK WILL TAKE THE LIFE OUT OF YOU.

People buy the package as often as they do the contents, therefore see your egg packages and the coops you ship your stock in present a nice appearance. The first impression is lasting and goes a long way towards making the purchaser satisfied.

Good stationery, envelopes, etc., also go a long way towards landing the order for you, and your catalogue is your traveling salesman; be sure to send out a good representative. We can help you out in these lines. Let us submit a letter head design for you. We will surprise you at the small sum it will cost you to get something artistic and the money spent will come back tenfold in increased orders.

—o—

THINGS WORTH REMEMBERING.

NOTHING comes of nothing.

There is only one easy place—the grave.

The idler or dawdler cannot be a happy or a useful citizen.

When a man sits by the fire and loaf it is not difficult to foresee that the fire will soon be out and he will want for heat and a loaf to satisfy his hunger and warm his body.

Every victory that is worth while has been won at the price of a hard and continuous labor. Therefore, be up and doing.

Where you find great action there you will find a great heart.

There are more values in work than

simply the outward things it constructs. It is most useful in the secret character it builds, the continually growing ambitions and the honest striving to attain "ideals."

Do not be looking for the "soft snap," for leisure and idleness unearned are the very things that take away the joy of living and fill the mind with bitterness and jealousy.

I wish to inform the readers and advertisers in my territory, which is Indiana, Illinois, Ohio, Michigan and Wisconsin, that this page is open to all of them. If you have any little news item or any little instructive or pleasant thoughts, send them to me. Address: C. W. Zimmer, Ft. Wayne, Ind.

Meet me at Niagara.

C. W. ZIMMER, PRESIDENT OF THE NATIONAL SINGLE COMB RHODE ISLAND RED CLUB EXPRESSES HIS VIEWS ON THE PROPOSED CHANGES IN THE STANDARD FOR THE R. I. REDS.

Regarding the changes in the Standard for R. I. Reds will say I am in favor of leaving out the ticking in the hackel of the female, because it requires a double mating to produce this one little thing, and the males produced from this mating are culls. Furthermore the ticking has a tendency to crop out more and more in the male line, and we see many a fine male, except he has ticking in the hackel, and that spoils him.

In a very few years' breeding, one would not get any males or females showing any ticking whatever.

I know we can hold the black in the other sections as now described by the revision committee. The black in the wings is now described correctly, just as they breed. This is consistent with "nature's laws" and is correct. The old description asked for an unnatural and impossible coloring. The black as now described in the tail is also correct, as it is the way they breed. In all my years' breeding and in all my travels and handling thousands of Reds I never saw either a perfect wing or a perfect tail on any Red judging by the old Standard description, but I have seen some few specimens that would have a wing or a tail that would fit the word description as now proposed. But let me state right here the Red breeders will have plenty to do to breed them up to this Standard.

Don't let any one think that it is too easy. He will have plenty to do to produce the top-notchers.

There is only one thing in these proposed changes which I do not approve, that is the allowing a slight bluish bar below the web in the back of both male and female. I say I do not approve of this. Still my understanding is the new Standard will instruct us to "pay less attention to undercolor." This being the case, and the fact the wording is may have a slight bar of bluish slate below the web, qualifies this so much that it scarcely amounts to anything. Therefore I am willing it should stand as it is, and I heartily endorse all the other changes and am willing to stand for that.

I know the revision committee labored hard and long wading through lots and lots of evidence as to the wishes of the breeders of R. I. Reds all over the country, and I am sure after all this was thoroughly considered by them that they were in a better position to judge what the majority of the breeders wanted than any one individual is.

Therefore I say we should put aside our personal wishes and desires and hail the proposed changes with a "glad hand" and thank the revision committee for doing so well.

The prospects never were brighter for a good business in the poultry world. We personally know of several breeders who are planning on starting an active advertising campaign by using large space in our September number. Don't you think you had better do likewise? The early bird catches the worm, you know.

Poultry Farms For Sale

HERE ARE SOME BARGAINS

**No doubt you can find just what you are looking for
Write us for further information**

No. 10.—5½ acres in Indiana, sandy loam, 9 room house, good well, cement cistern, hay barn, carriage shed and barn for team; 2 poultry houses accommodate 150 hens; 1 brooder house 14x48, with 8 brooders and runway; 60 bearing fruit trees, 8 currant bushes, 6 gooseberry bushes, 36 black raspberries, 2 grape arbors, and misc. vegetables. Situated ½ mile from town, all town conveniences; new electric road near house. Price, \$1,600.

No. 12.—Near Tarrytown, Md.; an ideal poultry and fruit farm; contains 35 acres clear land, fully cultivated; nine-room living house, large barn and wagon shed; three hen houses and two nurseries; two wells of water, wind pump, telephone, good wagon road and good shipping accommodations to Philadelphia. Fruit in abundance, crop averages 100 bu. plums, 300 qts. cherries, 300 bu. wheat, 300 bu. corn, 20 tons hay. Price, \$8,400, half cash.

No. 13. Farm of 12 acres; rich black soil, well drained, all set in grass; much fruit of all kinds; house of 6 rooms, cellar, smoke house, barn for 4 horses, carriage house, cow stable for 3 cows, hog house and feeding floor, chicken house 12x45 ft., several colony houses, all in good condition, fenced, with nice shady grass runs for chickens. Now breeding pure bred "Ringlet" B. P. Rocks, with good trade established. Located south central Illinois, fifty miles due south of Springfield, Ill. All inside city limits of Litchfield, Ill., a thriving city of about 9,000 population, with the best of railroad facilities, four steam roads, one electric road; over 50 passenger trains daily; churches of all denominations, and our schools are second to none. Price, \$4,200 net, terms to suit. No trade considered.

No. 14.—Ten acres of rich loam soil in Whitewater, Wis. City water, electric lights and telephone; ½ mile from depot. 2 blocks from school house and church; fancy prices for eggs; good well, cistern with pump, six-room house, double plastered, cement cellar, good woodshed, 2 story brooder house, grainery 20x20 ft., brooder room 10x20, outside run 10x20; hen house 50x14, brick floors; one small hen house 12x6, with grassy yard 26x70 ft.; another small hen house 5x15 ft., with yard 63x33 ft.; also another near cow barn, 6x16 ft.; scratching shed 12x12 ft.; grass yd. 50x75 ft. Two-story house and carriage shed 32x14 ft.; cow barn, 2 story, 40x16 ft. Spring lake of about ½ acre in pasture well stocked with game fish. Fruit on place consists of ¼ acre strawberries, ½ acre raspberries, blackberries, currants and gooseberries. Vineyard in connection; plum, cherry and apple trees; all kinds of vegetables. All poultry appliances and over 100 head of fine Leghorns are included in the exceptionally low price of \$4,500. Better investigate this place. Owner is in ill health and must sell at once. Immediate possession.

No. 15.—In Alabama. 340 acres of Orangeburg loam land, 2 miles from

Whistler, 7 miles from Mobile; 6 room house, barn 24x40 ft., tool house 10x20 ft., three chicken houses 10x30, one 10x20, one brooder house 14x40, 5 poultry yds., 3 incubators and brooders. Plant will accommodate 600 head of poultry. Plenty of water, good pump, with shed, milk and bath rooms. Will sell improvements and 340 acres of land, \$7,800, \$1,500 cash, bal. time, or 40 acres of land and improvements for \$4,200, \$1,500 cash, balance time.

No. 16.—Omaha, Neb. 5 acres within the city limits. One 7-room modern house, city water, electric lights, etc. Entire land bearing fruit, consisting of peaches, apples, grapes, plums and berries of all varieties. Barn with good brick basement, one large laying house to care for 500 layers, one brooding house to accommodate 500 chicks; 10 minutes walk from car line. Price, \$6,250, including 200 S. C. White Leghorns.

No. 17.—Another one in Wisconsin, 2½ acres near Waukan, Wis., one mile from St. Paul Ry. station. 2 story modern house, hen house 12x20, three colony houses, 100 colonies of bees, good for 4 tons of comb honey; barn 20x20 ft., 18 ft. posts. Over 300 apple trees, 20 cherry and other trees, 600 blackberries, red raspberries, strawberries, etc., 10 acres barley and hay. Several acres of pasture, 1 cow, 21 head Lincolnshire sheep, and 50 Leghorns and Minorcas included in low price of \$3,200. Owner must go south.

No. 18.—Three miles from Bay City, Mich. 11 acres, large two-story house, good furnace and fireplace, water, cistern and pump; two tile wells; ice house, milk house and wood house in one building 14x30, 16 ft. posts; carriage house, 18x24, 16 ft. posts; hen house, 16x24, 12 ft. posts; barn, 30x36, 20 ft. posts; 300 bearing apple, pear, plum and cherry trees, 100 young apple trees due to bear in 3 yrs.; 1,000 grape. Farm borders on Cocker river, good fishing and hunting. A snap at \$3,150, worth double.

No. 19.—Business Opportunity. A good paying business in large city in northern Indiana, established 16 years and paying a large profit. Offered only because of owner's failing health. Large lot and factory, buildings and machinery, all for \$5,000. Any one can learn the business. Present owner would remain one year if necessary. Write quick.

No. 20.—Ideal acre place, inside corporate limits, 1¼ miles from heart of city of 6,500 people. Northern Indiana. Rich sandy loam soil, fine southern slope. Lots of fruit and berries. Telephone and mail service; convenient to car line, school, etc., etc.; large 7 room house, cellar, well, city water, 75 bbl. cistern, small barn, chicken houses and yards. Abundance of fruit trees and small fruit. Ideal home and a fine place to garden or raise chickens. Bargain price for quick sale, \$3,200.

If you have a place for sale you had better list it with us : :**

**AMERICAN POULTRY JOURNAL PUB. CO.
358 DEARBORN STREET : : : CHICAGO, ILLINOIS**

Western Jottings

By Amos Burhans, Waterville, Minnesota

Mr. Earl Henry, the prominent Minnesota Partridge 'Dotte' exhibitor and breeder, has just secured a small fruit farm close to Albert Lea and will enlarge his breeding business, as he has not been able to care for all the trade going his way.

Charley Rhodes was seen in Chicago recently briskly stepping along Dearborn.

The case of Poultry's editor vs. Farm Poultry's head scribe seems to have resolved itself into the pot calling the kettle black.

American Plymouth Rock Club is working at present in the West to formulate the various state branches and elect new officers. Secretary Smith is pushing things right along.

George D. Holden, one of the members of the A. P. A. auditing committee, reports good season's business. He will go to Boston during July to meet with A. P. A. Secretary Kimmey, D. A. Nichols and President Bryant on the auditing board, they going over the books of the secretary before the Niagara Falls meeting.

T. L. Ricksecker has secured the interest of his former partner, Mr. Lockhart, in the Red Lawn Farm of Kansas City, Kan., breeders of Rhode Island Reds.

Mrs. Mabeile Burbridge, editress of the Pacific Fancier, has sold her journal to Mrs. H. G. Barry, an experienced writer and newspaper woman. Mrs. Barry is mother of Richard Barry, the well known coast war correspondent and playwright.

Any number of breeders and fanciers in the states adjacent to Chicago are looking forward to the next show in this breezy city. They want to see what sort of a show Big Theo. can get up and will boost all they can in building up one of the three big poultry show events.

Robinson's quarterly, devoted to Barred Rocks, comes next. Chickendom and others also bid for honors.

AT NIAGARA FALLS.

Just what the A. P. A. annual meeting will do with all the amendments offered is more than we can say at this time. Some of the proposed amendments are about identical with certain ones offered last year. Here are a few of the many offered:

1. The separation of offices of the secretary and treasurer.
2. The election commissioner should hold no other office.
3. All membership applications to go through the branch association in which the applicant resides.
4. That the secretary-treasurer be elected by the executive board by two-thirds majority.
5. The salary of the secretary to be fixed by the executive board.

6. A plan by which the votes of members may not be identified.

7. The place of annual meeting to be voted upon every year rather than every three years.

8. A free copy of every new Standard for every member of the association.

9. An examining board to hold two differently located examinations for applicants for judges' licenses at some of the leading shows. Board to be composed of four men and a chairman.

10. That judges be made to pay a yearly fee of \$5 if they would be registered as A. P. A. adjudicators.

The names of the originators of the proposed amendments are not given this year. Much speculation is being indulged in by members. The entire work of the revision committee will be gone over and the proposed changes be given over to the meeting for it to do with as it desires. This and many other things will make a very interesting session. Every member who can afford the time and expense will be well repaid for the trip.

THE LITTLE SISSY.

This may seem almost incredible, but it is as true as there are stars in the sky that a Buff Cochin Bantam rooster belonging to myself has recently hatched out three chickens from five eggs.

For about three weeks he used to go on the nest and remain there for two or three hours daily and would also stay there some nights. At last he got so broody that he stayed there almost one whole week without hardly getting off to eat, drink, etc. Having set his mate, the little hen, Tuesday, June 8, seeing the rooster still persisted, at last decided to set him the following Wednesday on five white Plymouth Rock eggs, much to the satisfaction of the little fellow.

The first few days I watched him very closely but he still performed his duty. Day by day went by until the twentieth came, much to my astonishment and pleasure, out came three little chicks, while the little hen brought out four, making a small flock of seven. This pair having been raised together were very well acquainted with each other, so decided that I would let them remain together (as I know they were willing) and take care of the little fellows. So they are both together bringing up their little family and sitting side by side in the bright sun like two lovers on the rustic seat in the moonlight.

Anyone doubting this, would be pleased to hear from them at any time. Oveid B. Packard, Greenville, Me.

Don't overlook the fact that the Tower Hotel, Niagara Falls, N. Y., is making special preparations to accommodate the members of the American Poultry Association during the annual meeting this month.

Pure, cool water is quite as necessary for chicks as for yourself. See they have plenty at all times.

TO PARTRIDGE WYANDOTTE FANCIERS AND BREEDERS.

It will be interesting news for the breeds and fanciers of Partridge Wyandottes to know that a real live and up-to-date club has at last been organized for their benefit, for the sole purpose and object to further the interests of its members and to advance and hold our grand variety, the most beautiful of the Wyandotte family, to the front rank both in the show room for their much admired beauty and for the farmer, for their unexcelled utility qualities, justly termed the beauty fowl, a bird that fills a double purpose.

To those who breed them our beauties require no introduction, to those who in the past have not given them due consideration, watch our smoke and the big noise, in Wyandotte alley at the various shows throughout the country, the coming season. Why? Because we are going to do a few live stunts this season, that are bound to stir the boys to action by sending their best birds to the show room to carry off some of the good things that we are

going to offer as an inducement, for the benefit of our members.

Our first offering of interest will be at the great Alaska-Yukon-Pacific Exposition Poultry Show, at Seattle, Wash., from September 27 to October 6, 1909, where we are offering for the competition of our members a beautiful \$25 silver cup, to be awarded for the best pair, old or young, donated by the officers of the National Partridge Wyandotte Club. Mr. C. E. George, president; Earl Henry, first vice president; Otto B. Cannon, second vice president; William Erfurth, secretary-treasurer. In addition to the cup, the club is offering a set of beautiful special badges.

It has been decided to hold our first club show and meeting with the newly organized association, called the Great Mid-West Poultry and Pet Stock Association, of which Theo. Hewes, of Indianapolis, is the secretary who will hold their first annual show in the great Coliseum, Chicago, Ill., December 7-12, 1909. You can look for this show to be the largest and grandest ever held in Chicago. It is the awakening of a new era in poultrydom and may the promoters of this new enterprise meet

with every success. In addition to the liberal premiums offered by the Chicago Show Association, the National Partridge Wyandotte Club will offer silver cups, cash, special club badges, etc. The officers and the state directors will personally donate various kinds of merchandise, some will offer a good show cockerel, others a setting of their best eggs, etc., as premiums to be awarded as prizes at our first show at Chicago.

It is the aim of the promoters of this new Partridge Wyandotte Club, to gather as many worthy premiums together to award as prizes at our first meeting, to make it an object well worth the trouble to come many miles to compete for, and we will guarantee every one a fair and square deal, and may the best birds win on their true merits.

In the meantime the officers and state directors will not leave a stone unturned to get every wide-awake and honorable breeder of Partridge Wyandottes to join the National Partridge Wyandotte Club.

Any one desirous of joining our club will please communicate with the secretary, William Erfurth, South Chicago, Ill., who would be pleased to furnish them with an application blank, also with further information concerning the club, if desired. Come, brothers, join the club, and become one of the boosters. William Erfurth, secretary-treasurer, South Chicago, Ill.

SILVER LACED WYANDOTTE CLUB OF AMERICA.

The Silver Laced Wyandotte Club of America had an election of officers in May, for the year 1909. The election was conducted by mail and considerable interest was shown. The result was, the reelection of Henry Steinmesch, St. Louis, for president, and

FREE BOOK COUPON

Cut this ad out and send to us with your name and address—or just write us a postal. That's all it costs you to get our big 128-page book on poultry keeping for profit. It tells how big money is made by using **Ideal Incubators and Brooders**, and quotes my low direct factory prices on the best machines made. My many years experience will help you. Get my book NOW.

J. W. Miller, Pres., J. W. Miller Co., Box 56, Freeport, Ill.

THE U. S.

OFFERS THE GREATEST OPPORTUNITY

in the world to makers of industrial or denatured alcohol. Those who start this production now are bound to come to great rewards. The field is practically untouched, and by starting now you can have things very much your own way. **THE UTILIZATION OF WOOD WASTE BY DISTILLATION.** A general consideration of the NEW INDUSTRY, including a full description of the distilling apparatus used and the principle involved, also methods of chemical control and disposal of the products; first edition illustrated by seventy-four engravings, 156 pages. This book is cloth bound; it will be sent to any address, postpaid, on receipt of \$3.20. Every farm, ranch and merchant needs a 5-gallon tax-free denatured alcohol distillery apparatus, price \$125.00. A 100-gallon distilling apparatus costs \$700.00. May we have the pleasure of your early reply? We are sincerely yours,

Wood Waste Distilleries Co., Cleveland, Ohio

E. S. Tarbox, Yorkville, Ill., for secretary and treasurer, and seventeen vice presidents for sixteen states and Canada. The membership (all Silver Laced Wyandotte fanciers) is now the largest in the history of the club. The club has some wide-awake ideas for the winter shows 1909-1910. In the first place, the club ribbons will be the finest ever offered by any specialty club, and these ribbons will be offered by many shows, only, however, where the secretaries of the shows will ask for them, and have proper announcement made in their regular premium lists. In the second place, more than \$200 in cash and cups will be offered at some of the principal shows. All these specials, however, can only be competed for by members of the club. The cost of membership is \$10, and application should be made to E. S. Tarbox, Yorkville, Ill., who will also gladly send club catalog free to all who will write him.

NOTICE TO SHOW SECRETARIES.

The White Plymouth Rock Club will offer ribbons the coming season at such shows whose secretaries file the necessary requisition in time to have a full notice printed in their premium lists. These ribbons are to be competed for by club members only, whose dues are paid to July 1, 1910, three days before the date of show.

There must be two or more members competing to secure award of ribbons, which will be on order from the show secretary, in writing, sent to this office, verifying the winnings.

Where a state has twenty-five or more paid-up members a silver cup will be offered at the "state meeting," under similar conditions, excepting that there must be five or more members, belonging to that state, competing for the cup. Most points to win.

Members of other states may compete for ribbons, but not for state cup.

Charles H. Ward, Secy.-Treas.

Bethel, Conn.

AMERICAN BUFF PLYMOUTH ROCK CLUB.

The American Buff Plymouth Rock Club offers as special prizes at the Alaska-Yukon-Pacific Exposition, September 27 to October 6, a beautiful silver cup for best cock, hen, cockerel and pullet; also four handsome silk ribbons: One for best-shaped male, one for best-shaped female, one for best surface-colored male, one for best surface-colored female. Only members are eligible to compete for these specials. If you are not a member of the club join at once by sending the membership fee of \$1 to William A. Stoltz, secretary, R. R. No. 19, Indianapolis, Ind.

NATIONAL WHITE WYANDOTTE CLUB.

The vote of our membership for place of annual meeting being nearly unanimous in favor of Niagara Falls, N. Y., I herewith call the annual meeting of the National White Wyandotte Club for Wednesday, August 11, 1909, at 2 p. m., at Niagara Falls, N. Y. The hall will be bulletined at A. P. A. headquarters.

Charles D. Cleveland, President.

ASSOCIATIONS AND SHOWS

Secretaries are requested to send in news items of interest about their show for this department.

THE GREAT MID-WEST POULTRY AND PET STOCK ASSOCIATION.

Chicago, under new management, bids fair to rival the largest shows ever held in America. The new association is backed by business men that have a thorough knowledge of the wants of the poultry and pet stock breeders. They will offer liberal cash and special prizes and guarantee the payment of them.

America's leading judges have been engaged to award the prizes. The Coliseum building, one of the best show-rooms in America, has been leased and with the famous Empire coops with which to cage the show and a city of more than 2,000,000 people to patronize it, we look for one of the greatest shows ever pulled off in this country. The dates, December 7-12, 1909, are ideal for a good western exhibition and coming as it does, two weeks ahead of New York, gives the eastern breeders an opportunity to patronize both exhibitions. A glance at the list of stockholders will convince the most skeptical that this show will be run on down-to-date, broad-gauge principles and it is really gratifying to us to know that Chicago has at last taken its proper place at the head of the great mid-west poultry industry.

The show will be run on practically the same lines as New York and Boston. The premiums will be \$5 for first and \$3 for second in the single class with \$8 for first and \$7 for second on breeding pens. Following is a list of stockholders. For further information address the secretary.

Charles Buschman, Indianapolis, Ind.; Inland Poultry Journal, Indianapolis, Ind.; Henry Dipple, Indianapolis, Ind.; Reese V. Hicks, Topeka, Kan.; F. L. Kimmey, Morgan Park, Ill.; Dan Palmer, Yorkville, Ill.; E. E. Richards, Cedar Rapids, Iowa; Irving A. Sibley, South Bend, Ind.; A. and E. Tarbox, Yorkville, Ill.; C. S. Byers, Hazelrigg, Ind.; J. C. Dinsemore, Kramer, Ind.; Frank Hare, Quincy, Ill.; A. E. Martz, Arcadia, Ind.; Charles G. Pape, Fort Wayne, Ind.; George Rudy, Mattoon, Ill.; William A. Stolls, Indianapolis, Ind.; Ernest Kellerstrass, Kansas City, Mo. Theo. Hewes, Indianapolis, Ind., secretary.

OHIO BRANCH A. P. A.

Members of the Ohio Branch of the A. P. A.: Between the hours of 4 and 6 p. m., Thursday, week of the Ohio State Fair, special meeting of this branch will be held in the Administration building, on the grounds of the Fair Association. Many things of importance to all poultrymen will be considered at this meeting. Let us all turn our attention to Columbus for the present, for the time is close at hand when the great industry of poultry will be making some earnest demands, from the assemblies held in that city, which are but the people that have courted

our support to land them in the legislative halls. Ohio poultrymen are about ready to demand something from these representatives. All other branches of animal industries have been well looked after and cared for with a fair degree of liberality. But the poultry industry, notwithstanding "that more people are engaged in raising poultry, and more dollars are produced from this branch of animal industry than from either horses, cattle, sheep or swine," has received little consideration. We should be fair in our demands, and we should be positive in demanding fair and just consideration. Poultrymen, let this be the first notice to our representatives that we are on the road to Columbus, and that we are coming with numbers sufficient to awaken a new feeling of interest on the part of representatives, that heretofore has almost ignored the poultrymen. I. A. Freeman, secretary Ohio Branch of A. P. A.

OFFICERS OF THE SOUTH-WEST BRANCH OF THE A. P. A.

President, Henry Steinmesch, St. Louis, Mo.; vice president of Missouri, W. M. Beal, Kansas City, Mo.; vice president of Texas, Emmet Brown, Cleburne, Tex.; vice president of Louisiana, R. E. Bruce, Crescent, La.; vice president of Arkansas, J. F. Anderson, Waldron, Ark.; secretary and treasurer, E. L. Delventhal, Warrenton, Mo.; election commissioner, Otto B. Cannon, Elsberry, Mo.

NOTICE OF MEETING.

Prof. Plum has called a meeting of the Ohio State Poultry Association Co. at the State Fair grounds at 2:30 p. m., Thursday, Sept. 2. Place of meeting will be posted in the poultry building on Wednesday. Every poultryman in Ohio invited.

G. R. Haswell, Secretary.

EXTENSIVE POULTRY EXHIBIT AT COLORADO INTER-STATE FAIR.

Special.

Denver, Colo., July —At the last meeting of the Colorado Poultry Fanciers' Association held in Denver several important matters were determined upon. It was decided to give an extensive exhibit at the Second Annual Colorado Inter-State Fair and Exposition to be held in Denver the third week in September and to hold the association's own show in January during stock show week. Theo. Hewes, of Indianapolis, was engaged as judge. W. E. Valpon, the newly elected head of the experiment station at the Colorado Agricultural College at Fort Collins, was present and outlined the plans of this new department. Secretary Fuller of the Colorado Inter-State Fair, is doing everything possible in the way of cooperation with the poultrymen and the poultry department at the Agricultural College and as a result a record-breaking exhibit is expected. Secretary

FARM JOURNAL

1308 Race Street, Philadelphia, Pa.

Fuller's premium list in the poultry department at the fair is as complete as it is possible to make it, every variety having a chance to win honors. The Colorado poultry men have decided to donate the stock necessary to equip the Fort Collins experiment station, and Professor Valpon reserves the right to decline such stock as may not be available for the experimental purposes.

THE TRI-STATE POULTRY SHOW, MEMPHIS, TENN.

The premium list of the Tri-State Poultry Association show, to be held in connection with the Tri-State Fair, at Memphis, Tenn., Sept. 28 to October 9, has just been received. It is gotten up in a very tasty style and makes some very attractive offers, a summary of which follows: Regular cash prizes for every breed of standard poultry, turkeys, ducks and pigeons, amounting to \$2,000; sixty special prizes; thirty-eight cash prizes ranging from \$125 to \$5, amounting to \$525; fifteen cups and medals, valued from \$50 to \$10, amounting to \$400; two silver cups for amateurs (parties who have never exhibited before), valued at \$40; five juvenile premiums (exhibitors under 20 years of age), headed by scholarship in Nelson's Business College, worth \$50, and other valuable prizes valued at \$90, making a grand total of \$3,055.

Such liberal premiums offered by a new association and in an undeveloped territory should be of interest to our poultrymen, for it opens up great possibilities for those who take their birds to this show. The awards will be placed by Theo. Hewes, F. J. Marshall and S. T. Campbell, all judges of national reputation, who need no introduction to the poultrymen of this country. For premium list or other information address **R. C. Stockton**, superintendent, 10 North Second street, Memphis, Tenn.

LA CROSSE, WIS.

At the recent annual meeting of the Western Wisconsin Poultry Association, the following officers were elected: **George F. Jacobs**, president; **John E. Hawser**, vice president; **Joseph H. Pochling**, secretary and superintendent; **J. J. Frisch**, treasurer. The Western Wisconsin Poultry Association will hold its next annual meeting at La Crosse, Wis., December 21 to 27, 1909. **F. H. Shellabarger** has been engaged as judge.

The feature of the coming show will be the prizes and the large cash premiums offered.

For further particulars address **Joseph H. Pochling**, secretary, 1517 Farewell street, La Crosse, Wis.

NEW BRIGHTON, PA.

The Beaver Valley Poultry Association will hold its second annual show on January 19-22, 1910, at Junction Park Pavilion, New Brighton, Pa. This is one of the finest buildings in which to hold a poultry show in the state and is located in the center of a manufacturing and industrial district of 50,000 population. Silver cups will be given to the best exhibits in each of the leading standard varieties, the cash premiums are as large as those of any show and the Association will have the money ready to pay all premiums im-

Roofing

Before deciding on *any* roofing, for *any* purpose, send for this free book which will give you the inside facts about all roofings—shingle, tin, tar, iron—and prepared, or "ready" roofings.

This book is fair, frank, comprehensive. It tells all about the cost of each kind of roofing. It tells the advantages and the disadvantages of each. It is a veritable gold mine of roofing information.

The reason we send it free is because it tells too, about Ruberoid roofing.

Since Ruberoid roofing was invented nearly twenty years ago, there have sprung up more than 300 substitutes.

These substitutes, *before they are laid and exposed to the weather*, look like Ruberoid. But don't let that deceive you.

Ruberoid roofing is sun proof, rain proof, snow proof, cold proof, weather proof. It resists acids, gases and fumes.

RUBEROID

(REGISTERED IN U. S. PATENT OFFICE)

It is so nearly fireproof that if you drop live coals on a Ruberoid roof it will not burn.

The secret of these wonderful properties of Ruberoid roofing lies in the Ruberoid gum—our exclusive product.

No other maker can use this Ruberoid gum—that is why no other roofing can possibly be so good as Ruberoid.

Ruberoid is supplied in its natural color, also in shades—Red, Green, Brown—suitable for the finest homes. And the colors do not wear off or fade, because they are part of the roofing—impregnated by our exclusive process.

mediately at the close of the show. The Association owns their own Empire coops and expects one of the largest lists of entries of any show in Western Pennsylvania or Eastern Ohio. All birds will be in charge of a superintendent who has had many years of experience. A. F. Kummer, of Butler, Pa., has been secured to judge the show. This Association is composed of wide awake poultry fanciers and business men and anyone who intends to show their birds this season, should not miss this exhibition. Any further information will be cheerfully furnished by the secretary, J. Mays Ecoff, Beaver, Pa.

DAYTON, OHIO.

The second annual show of the Miami Valley Poultry and Pigeon Breeders' Association, of Dayton, Ohio, will be held December 28 to January 1, 1909 and 1910, inclusive. The association is pleased to announce that their first show last year was a grand success financially and otherwise, and judging from the interest already manifested by the breeders of fancy feathers, this will be one of the best shows in the Middle West. They are well equipped to handle a large exhibit, having their own coops and one of the best rooms in Dayton.

Dayton is a hustling town with a great number of fanciers and the local association have the support and assistance of the merchants and a goodly number of specials are assured. They have secured the services of W. C. Pierce, of Indianapolis, Ind., to place the awards.

The officers are A. G. Dross, president; E. M. Abbott, 1114 Superior avenue, secretary, with B. F. Hewitt and W. H. Smith assistants.

Bear the date of this good show in mind and be with us to win.

KNOXVILLE, TENN.

The East Tennessee Poultry Association will hold its fifth annual exhibition at Knoxville, Tenn., January 5, 6, 7 and 8, 1910. D. M. Owen, of Tennessee, and H. W. Blanks, of Louisiana, judges. The association will offer a line of handsome silver cups as special prizes on all leading varieties, in addition to its usual long list of cash and other specials. The "Industrious Hen's" silver loving cup, offered for the "Highest scoring pen of birds in show, all classes competing," will prove a popular feature. We invite exhibitors from all sections of the country to show with us. John E. Jennings, secretary-treasurer, 202 West Fifth avenue, Knoxville, Tenn.

NASHVILLE, TENN.

The poultry show season in the South opens with the great Tennessee State Fair Poultry Show at Nashville, Tenn., September 20-25, 1909. This is the South's greatest show, and for four years has been patronized by the leading breeders of America. Send for premium list and entry blanks. John A. Murkin, superintendent, Nashville, Tenn.

COLUMBUS, OHIO.

The Ohio State Poultry Association Company was incorporated with a capital stock of \$1,000 shares at \$2, and the following directors and officers have

been selected: Prof. C. S. Plumb, president; G. R. Haswell, secretary; Charles L. Stiles, treasurer; Charles L. Fischer, William E. Hague, Hugo B. Hark, G. R. Haswell, John T. Heizer, Oscar E. Miles, Charles S. Plumb, E. Earl Shedd, Jr., Charles L. Stiles. The first annual show will be held in Columbus, Ohio, January 10-16, 1910. G. R. Haswell, secretary.

FORT MORGAN, COLO.

The Eastern Colorado Poultry Association will hold its second annual show December 8-11, 1909. T. W. Southard, judge. Samuel H. Rathbone, secretary.

PERU, ILL.

The poultry fanciers of Peru, Ill., recently formed a poultry association and will hold their first annual show December 1-7, 1909. W. G. Warnock, judge. R. E. Marlett, secretary.

OCONOMOWOC, WIS.

The Oconomowoc Poultry and Pet Stock Association will hold their annual show December 15-20, 1909. James A. Tucker and H. Vanselow, judges. O. R. Eddy, secretary.

MARION, OHIO.

The Marion Fanciers' Company will hold its third annual exhibition November 30-December 3, 1909. Charles McClave, judge. M. G. Dickerson, secretary.

BRYAN, OHIO.

The United Poultry and Pet Stock Association will hold its annual show December 13-17, 1909. J. A. Tucker, judge. T. E. Schrider, secretary.

WOOSTER, OHIO.

The Wooster Poultry Association will hold its next show January 17-21, 1909. Charles McClave, judge. Phil U. Rice, secretary.

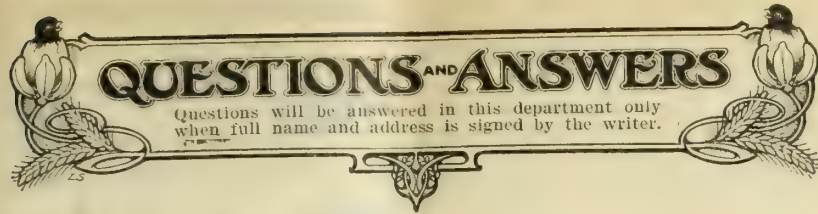

ALLEGAN, MICH.

The Allegan Poultry and Pet Stock Association will hold its annual show January 5-8, 1910. H. A. Emmel, judge. W. H. Warner, Jr., secretary.

The Indiana State Fair is offering very liberal premiums in poultry department this year. Send for one of their premium lists in which they offer nearly \$3,000 in cash on poultry alone. Sid Conger, Shelbyville, Ind., is superintendent of poultry and to whom you should write for premium list and other information. This fair is held at Indianapolis, Ind., September 6-10, 1909.

Out of bugs, worms, seeds and what it can pick and scratch from the waste of nature's laboratory the hen prepares the fair white egg—one of the most delicious morsels to the human palate and one to fill the heart of man with loving kindness.

If you get a chick that is only about one-half as large as its brothers and sisters, better cut its head off now. Ten to one it will never live long enough to even make a fry.

Questions will be answered in this department only when full name and address is signed by the writer.

Question: (1) Why do chickens swell and puff up? They seem to be healthy and eat well. I had lots like that last year, but only one this year. I usually pick it with a pin. (2) Which is my nearest state to send for some live leghorns? Not being acquainted with the states near here, I sent to Brodjen, Wis., last year, and had good stock, but the express charges were very high. C. V.

Grand Forks, B. C.

Answer—(1) The exact cause has never been discovered. They are called wind tumors, and can usually be cured by picking with a pin. (2) Washington or Oregon.

Question: (1) Is it common for S. C. White Leghorns to show black spots in the plumage? (2) Is it necessary for curtain to reach the floor when hung in front of roosts, when platform for the droppings are not used?

Benson, Minn. C. R. T.

Answer—(1) Yes. (2) Yes.

Question: (1) How early should machine be started to raise broilers for the winter to be continued until summer? (2) What size brooder house would be required to raise them to broiler size by having it so one 100-egg machine would come off each week, through seasons, and how many brooders would I need? (3) I have read of and heard a lot of talk about Indian Runner Ducks being such a greater fowl over the Pekin but have heard no one say that they make as early broilers as the Pekin. Are they as desirable?

Sharon Hill, Pa. G. L. B.

Answer—(1) First of September. (2) You would have to anticipate having room for at least 800 chicks and if using individual brooders would require at least 16. Space in this department will not permit us going into details as to the size building, etc., that would be required, but this information can all be obtained by writing any of the large incubators and brooder manufacturers. (3) The Pekin Duck is considered best for the market. The Indian Runners are great layers.

Question: (1) Are Buckeye chickens good winter layers? (2) Where can I get a book telling how to breed them? (3) Is alfalfa meal mixed with molasses good to feed laying hens? (4) Which would be the best way to feed it—once a day or in a hopper?

Collinsville, Ill. F. B.

Answer—(1) They are so considered. (2) The American Standard of Perfection will tell you what a Buckeye should be. Price, \$1.50. There is no other book on this variety that we know of. (3) Alfalfa meal is good for laying hens, but would suggest leaving out the molasses. (4) Good results can be obtained by feeding either way.

Question: What do you think about Irish potatoes (boiled) for fattening

broilers at this season of the year? Am feeding liberally once each day, giving all they will clean up. G. D. Jr.

Ozark, Ark.

Answer—We have never used potatoes in this manner, therefore we are unable to say; but have always been under the impression that potatoes would make good food for poultry if fed in the proper manner.

Question: (1) Is prepared meat meal just as good for poultry as fresh beef scraps? If so, how old should chicks be before feeding it to them, and how often should it be fed to laying hens? (2) What is the cause of eggs being watery? (3) What is the matter with a hen when she passes a long white worm, both ends pointed. (4) There are two of my hens have sores on the bottom of their feet. What is a remedy? (5) Are turnips better cooked or raw? C. E. O'B.

Columbus, Ohio.

Answer—(1) Prepared meat meal is considered very good for both fowls and chicks and can be kept before them at all times, from the time the chicks are two months old. (2) This is due to the fowls drinking too much water caused by eating too much dry feed. (3) Indication of intestinal worms. Dr. Salmon's book, "Diseases of Poultry," gives full information on this subject. Price is only 50 cents. For sale by us. (4) This is caused by the fowls jumping from a high perch onto a hard substance. See article on diseases in this issue. (5) Cooked.

Question: I have single comb White Leghorns, pure bred, that have been scratching in coal ashes until their feet and legs have turned to a pale white color. Will this have any effect in their winnings at shows, and will the natural color ever return?

Boonville, Ind.

R. S. K.

Answer—This will count against them in the show room, and we doubt very much if the natural color will ever return.

Question: (1) Do you think that the laying of R. I. Red hens takes away any of their color? (2) Do the white spots in small R. I. Reds disappear after a few months? (3) Do you think that keeping the young cockerels with pullets while they are developing, stunt either sex? (4) Is the 1909 Standard of Perfection going to disqualify R. I. Reds in next year's show? (5) How old should chicks be before they are allowed to work.

Buffalo, N. Y.

A. H. H.

Answer—(1) No. (2) Yes. (3) Yes. They should be separated as soon as the sex can be determined. (4) No. (5) Three to four months.

Question: Some of my two weeks' old chicks have swelled up; the skin is puffed out under the wings and on back of neck about the size of an egg. These swellings are soft. They seem

in good health. They are kept on the grass and fed chick-feed, and warm sweet milk to drink. We also feed them bread moistened with milk.

St. Paul, Minn.

W. L. E.

Answer—These are what is known as wind-tumors. The remedy is to prick the skin with a pin and allow the air to escape. If it again accumulates, cut out a small diamond-shaped piece of the skin with a pair of sharp scissors and anoint it with vaseline.

Question: Is there any method of producing an early and quick molt? Is there anything in withholding feed for twenty-four hours except water? Keene, Ohio. W. A. McM.

Answer—Some breeders claim to hasten molting by feeding the fowls extra heavy for two or three weeks and then suddenly put them on a starvation diet for about two weeks, at which time the feathers will rapidly fall out. It then becomes necessary to supply plenty of feed and grit to produce the new feathers in the shortest time possible. Sunflower seeds are excellent for growing feathers and putting a nice lustre on them.

Question: How can I get rid of the roup? Had it for six years. Kill all infected birds as soon as seen; good hen house, no drafts. Would it be a good plan to sell all the old hens and start with a new flock? How does it spread? Is there a universal remedy? Sherburn, Minn. P. B. H.

Answer—Dispose of all your stock, thoroughly disinfect your houses and runs, and start with new, healthy stock. Roup is spread through the flock by the well birds drinking from the same fountains that the sick birds do, and by using the same feed dishes. There is no universal remedy; but by keeping the fowls free from lice and giving proper feed and care, roup and all other diseases will be unknown.

Question: (1) What do you consider the best to feed small chicks that are two days old? (2) What is the cause of a hen crowing like a young rooster? I have one that crows sometimes. (3) I have one hen that has not laid an egg for two months; she is quite heavy, she eats as much as the rest, does not look sick, only has her mouth open most of the time, as though she were gasping for breath. Can you tell me what is the trouble with this hen, and if anything can be done for it? (4) Some time ago one of my hens died; was only sick one day, that I could see. Her crop was as large as a cup and chuck full of corn and oats. It seemed as if the food would not move out of her crop. What was the trouble with this hen, and what can be done in such a case? (5) What is the cause of chickens eating feathers from each other? Every winter my chickens do that. Sometimes they are entirely bare except the wing and tail feathers, when spring comes. M. E. C.

Chisholm, Minn.

Answer—(1) Hard boiled eggs and bread crumbs or any of the prepared chick feeds advertised in these columns. (2) We are unable to say. (3) This hen has probably become too fat and as she is unprofitable better kill her for table use. (4) Crop bound, and had no doubt been ailing for some time before you noticed her being sick. Dr. Salmon's book, "Diseases of Poul"

LOCK BOX 5651 : : PITTSFIELD, MAINE

try," will give you detailed information on this and all other subjects pertaining to poultry diseases, and the price is only 50 cents; for sale by us. (5) Feather-eating is caused by lack of exercise. During confinement fowls must be kept busy or they will get into mischief, either feather or egg-eating. By giving them plenty of litter to scratch in many of these vices can be avoided.

Question: I have bought some eggs to set and they are said to be from R. I. Reds, and they are not the same color. Are they supposed to be the same color? A. S.

Aurora, Ill.
Answer—R. I. Red chicks do not as a rule hatch uniform in color; but usually feather out well as they approach maturity.

Question: (1) How do Anconas do in the South compared with the North? (2) Is there a poultry journal published in the South? R. H. G.

Marion, Ohio.
Answer—(1) Anconas will do equally as well in the South as in the North. (2) Yes. Southern Poultry Journal, Dallas, Tex.; Industrious Hen, Knoxville, Tenn.; Southern Poultry Magazine, Nashville, Tenn.; The Southern Fancier, Atlanta, Ga.; The Southern Poultryman, Dallas, Tex.

Dr. Schaff, Zell, Mo., in reply to J. B. F. in our July issue says: Have kept Belgian Hares in my poultry house for the past ten years and the result has been my coops and fowls are free of lice and vermin.

Question: (1) Will turnips do as a green food for chickens in winter, and how should they be fed? (2) How many chickens can I keep with good results in a yard 32x45 feet.

Palmyra, Pa. E. M.
Answer—(1) Turnips may be used as a green food in winter, and should be cooked and mixed in the mash feed; but they are not as good as cabbage and sugar beets, which may be fed raw. (2) About one hundred.

Gapes in fowls are caused by a round red worm attached to the inside of the windpipe. This worm generally appears to be forked, but a magnifying glass shows that it is really composed of two worms, a male and a female, permanently united. The disease is most common in July and August and originates from swallowing the embryos of the worms in the dew or in impure water; sometimes it comes from worms coughed up by other fowls. Gape is a rare disease, but often proves fatal. If the disease has run for some time and the fowl easily handled, remove the worm with a timothy head with nearly all of the seeds rubbed off. At the inception of the trouble when the fowl is observed to gape at intervals put some turpentine in their feed and one teaspoonful of carbolic acid in one gallon of water about twice a week.

Provide artificial shade over the drink vessels that the water may be kept cool. Microbes develop rapidly in warm water.

Give special attention to feeding now. We are apt to overfeed, and a fat hen's egg never hatches well.

Amatite
ROOFING

Free Sample

THERE are two important points to be remembered in connection with Amatite Ready Roofing.

- 1st. It has a real mineral surface.
- 2nd. It is waterproofed with Coal Tar Pitch.

The mineral surface makes painting absolutely unnecessary, and the Coal Tar Pitch waterproofing is the greatest known enemy to water. You are sure of the very best protection at the lowest possible cost, when you buy Amatite.

Send for free sample and booklet.

SET IN HER WAY.

Sweet Mary Jane sat fourteen days and wouldn't deign to rise, Although her folks tried every way to make her realize That it was quite unladylike to sit all day and night, And never change her attitude or rouse her appetite. They coaxed and teased and threatened her, and still she would not stand, And when they tried to raise her up she bit them on the hand. They didn't want to do her harm or call in the police, And yet they sorrowed at the thought of Mary Jane's decease. But Mary Jane knew what was best, she wiser was than men, She sat until she'd had her set, for Mary was a hen.

—St. Louis Republic.

MODERN MARINE MARVEL.

New D. & C. Line Steamer City of Cleveland Now in Regular Service.

"Modern Marine Marvel," by what better phrase can you characterize a steamer that has 500 staterooms, washed air ventilation, passenger elevator, convention hall, and a Venetian garden.

The new D. & C. steamer has all these features and then some. This boat cost \$1,250,000, is 444 feet long, is seven decks high and has 8,000 horsepower engines.

Write for pamphlet containing detailed description of the new boat. Send two cent stamp to

D. & C. Navigation Co., Passenger Department, Detroit, Mich.

I have just bought a small farm, but haven't had much experience at farming. Can you tell me what sort of implements will enable me to do quick work without making it too hard for me?—John D.

The Planet Jr. Combination Garden Hand-Implement, and the Planet Jr. Horse-Hoe and Cultivator should fix you up just about right. They are wonderful labor-savers, and as to time—they do in about one-sixth the time what it would take a man to do according to old methods. These implements, ingenious as they are, are strong and durable. They are one of the best investments a farmer can make. S. L. Allen & Co., Box 1107T, Philadelphia, Pa., the makers, issue a free illustrated catalogue.

Dansville, N. Y., April 3rd, 1909. Chicago House Wrecking Co., Chicago, Ills.

Gentlemen: Your letter received in due time and also the car of lumber and other things, and everything was in fine condition. I am more than pleased with everything, and every person that has seen my lumber thinks it is all right. I am doing all I can for you and I think you will hear from other Dansville parties.

Thanking you very much for past favors, I beg to remain,

Yours truly,

(Signed) L. A. Pfuntner.

Elsewhere in this issue will be found a special announcement from T. A. Faulds, London, Ont., Canada, the well known breeder of Rose and Single Comb Black Minorcas. Owing to poor health Mr. Faulds has decided to dispose of his entire flock of Minorcas, including all his grand prize winners. This is a grand opportunity for some progressive breeder to get started right. Look up his ad and write him now. Mention A. P. J.

We are pleased to announce to our readers that Miss Alice M. Hedges, Pana, Ill., is again advertising her well known strain of White Plymouth Rocks in our columns. If you want something good for the early fall and winter shows, better write her today for prices and particulars. She treats her customers right. Mention American Poultry Journal.

**FLY REMOVER Saved \$75.00**

In Milk for a Customer who used it

Kills and keeps off animals; Flies, Mosquitoes, Ticks, Lice and Insects. Cows give 25 per cent more milk, as they are protected and feed quietly all day. Horses work and drive better. Hogs and poultry are free from lice. Used for years by same dairyman. No Gad Flies or Warbles if it is used.

1 gal. \$1.00, 5 gal. \$2.75, 5 gal. \$4.25, 10 gal. \$3.00, 25 gal. \$18.00, 50 gal. \$32.00. Hand sprayer to apply it, 65c. 4 gal. compressed air sprayer and whitewasher for applying in large dairies, \$5.00. 1 cal. will protect 200 cows. Money returned if animals are not protected. Terms Cash. Booklet Free.

Ripley Mfg. Co., Dept. 27, Grafton, Ill.

Simplest Cream Separator

This picture shows the extreme simplicity, lightness and durability of the sanitary Sharples Dairy Tubular Cream Separator bowl. Easily washed thoroughly in three minutes. In the right hand is the bowl—as smooth inside as out. On the little finger is the dividing wall, the only piece used inside the Dairy Tubular bowl. The other piece is the bowl bottom. Tubular Cream Separator sales exceed most, if not all, others combined. World's biggest separator factory. Branch factories in Canada and Germany. Write for Catalog No. 205.

CONKEY'S ROUP CURE

fails to cure Roup, Colds or Canker in Domestic Fowls or Pigeons. This wonderful powder is given in the drinking water. C. W. Fowler, breeder of Buff Plymouth Rocks, Smyrna, Georgia, writes: "I believe that every 50c package of your Roup Cure saves me \$50 in birds." It Kills the Germs! An absolute preventive! A splendid tonic. If your dealer cannot supply you we will! Prices, 50c and \$1.00, post-paid. We make one remedy for each disease. "The Conkey Book" (Price 25c) sent FREE if you give name of your poultry supply dealer and enclose 4c postage. Address G. E. CONKEY CO., Dept. F, Conkey Laboratories, CLEVELAND, O.

CLASSIFIED ADS

UNDER this heading ads will be inserted for six cents per word each month for less than three months, and **four cents per word each insertion for three months or longer.** Changes in copy allowed every three months. Numbers and initials count as words. All ads will be inserted under **classified headings.** No ads accepted at less than an average of fifty cents per insertion. Terms, cash with each ad. Count the words carefully to avoid delay in publishing. Write your copy plainly, as upon this the correctness of your ad largely depends. When placing your ads remember that advertisers of Classified Ads get better returns from AMERICAN POULTRY JOURNAL than from any other poultry journal—none excepted. On writing any of these advertisers mention A. P. J.

ALL COPY FOR CLASSIFIED ADS MUST REACH US BY THE 19th OF THE MONTH PRECEDING DATE OF ISSUE

ORPINGTONS.

LOOK! 300 JANUARY HATCHED White Orpingtons, now ready to lay, \$5 per trio. Cockerels, sons of pullet that layed 113 eggs before year old, \$2.50 each. Show pullets and cockerels ready for state fairs, \$5 each. We breed scientifically for eggs as well as show points. In Buifs we imported Frank Sisson's two best pen-hens weighing up to 12 pounds each, with wonderful soft even color and under-color, immense bone. We sell eggs from these wonderful birds at half price now. Here is opportunity for people living north of Ohio river. We hatch all summer; why not you? In Blacks our best pens remain intact and eggs are now half price. We have bred and sold such Blacks as Nabob 1st that won first at Madison Square, Boston, Cleveland, and we have better birds now than we ever sold. Remember our cheapest pens are headed by show cocks. No plant in America operates on closer margin of expense—no big salaries, no brass band—just quality. You will pay some breeders \$10 per sitting for poorer eggs than we sell at \$3. Our highest priced eggs cannot be duplicated at any price. Our catalog and bargain sale leaflet tell more and are free. Brown & Coleman, Station L, Cincinnati, Ohio. 6-3

ORPINGTONS SACRIFICED, including this spring's hatches. Magnificent Cook Tennyson-Fawkes Black cockerels cheap. Elmdale, Box 573, Oklahoma City, Oklahoma. 6-3

T. CADWALLADER, Box 952, SALEM, OHIO

WE PAY FOR NAMES

Send us names and addresses of five farmers and ten cents and we will send you for six months the Farmer's Call, weekly, 1000 pages a year, and having very prominent Women's and Children's Departments. In the Women's Department are illustrated each week the latest styles, and we sell the patterns for these to our subscribers for only five cents each—same patterns you pay ten cents for elsewhere. During the six months you will thus probably save several times the cost of the Farmer's Call. We refer to the publishers of this paper as to our reliability.

Illinois Farmer Co., 11 Jackson Park Sta., Chicago, Ill.

PAT POINTS ON POULTRY RAISING

Just what you're asking for. Pithy articles by long experienced poultry raisers. Answers to your questions. Complete show reports. A Department for every breed. Four complete poultry books during coming year—all in that wide-awake, bustling "Poultry Gazette," 40 to 80 pages

monthly, overflowing with the very facts you need to pull more money out of your poultry. Send 25 cents for a year's trial subscription. You'll be pleased.

The Poultry Gazette
Box 10, Fremont, Nebr.

What
E. H.
Harriman
has to say of
"The
Only
Way"

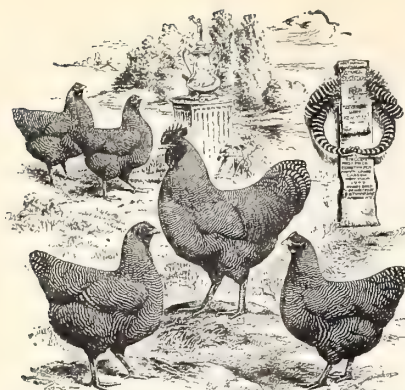

"The 'Alton' is today the best railroad physically in the state of Illinois; the service it renders is far ahead of most of the railroads in the state. It has been made 200 per cent better for two-thirds of its original cost; it is a perfect physical property, wisely managed and run in the way to give the people the best possible service. You may quote me in this respect."

"Ringlet" First Prize Exhibition Pen and Winners of Sweepstakes Silver Cup at Madison Square Garden, New York, 1909

For more than twenty years at New York my "Ringlet" victories have been complete. Exhibited by me personally they have won a grand total of 127 prizes, 69 of these being firsts and specials, being more first and special prizes than won by any competitor in the history of the show. These include the \$100 Champion Challenge Trophy, won three times; the \$100 Association Cup, won three times; the \$100 Sweepstakes Cup offered by the President for best Plymouth Rock cock, cockerel, hen and pullet, any variety.

The "Ringlet" world's record at New York four years in succession is a page of history. The "Ringlet" record of first on exhibition pen three years in succession is the undisputed Champion. My Clean Sweep of FIRST, SECOND, THIRD, FOURTH AND FIFTH PRIZES on pullets has never been approached in Madison Square Garden, and stands alone and unequalled.

One thousand grand breeding cockerels for sale; elegant hens and pullets in any number. Show birds fit to win in any competition. Richly illustrated 50-page catalogue upon request; it is full of original pictures of New York winners from life. EGGS from the world's finest exhibition matings, one setting \$6; two settings \$11; three settings \$15; four settings \$18. Address

E. B. THOMPSON

Lock Box 510, AMENIA, N. Y.

"RINGLETS" STAND ALONE, VICTORS OF THE FIELD . . .

At America's Imperial Show, Madison Square Garden, New York, Winters of 1908-1909 . . .

E. B. THOMPSON'S BARRED P. ROCKS

As usual win the leading prizes and achieve the highest honors that can come to any breed. First prize on cockerel, first prize on cock, the Great National Silver Cup presented by the American Plymouth Rock Club for best cock, cockerel, hen and pullet. Double the number first prizes of any competitor. Special for best shaped male, special for best headed male, special on hen, special on pullet, the Sweepstakes Special in Gold for best Plymouth Rock on exhibition of either sex and any variety. The Imperial prize of the show, special for champion male.

At the 1909 New York Show my 1st Prize Sweepstakes Cup Exhibition Pen was Declared by Expert Opinion to be the Finest Ever Exhibited. A Paragon of Perfection. The Sun Never Before Shone on Such a Masterful Exhibit.

I must have room and am really pricing \$10 birds for \$4 and \$5. There is still time to get breeding service from this grand offering. First come, get the best.

Amos Burhans : Box A : Waterville, Minnesota

OWEN FARMS

WE ARE READY ARE YOU?

It is with great satisfaction that we take this early opportunity in August to inform you that never in the history of our farm have we reared so many early chicks that are fully prepared for the early fall shows. We have wished to arrive at the position which we now have attained for the three years last passed, and we will be most glad to take up your early inquiry and give you definite knowledge and descriptions of birds and prices that will do for you what you ask of them. In writing please be particular to give us the proper information so as to save time, telling us the show at which you wish to exhibit the birds and the approximate price you wish to pay, and we will give you clear and definite information. Always remember that if we can do what we think you require we will say so, and if we do not think we can give you the quality we know you are anticipating at the price, we will be equally frank and tell you so. This avoids all disappointment and accomplishes for Owen Farms what they more than anything else wish to accomplish, namely, the entire satisfaction of their customer.

White Wyandottes We predicted in our catalogue and mating list that never were such pens mated as we had this year, and we are even now sure of it. The chicks are growing fast, showing enormous promise and that we are going to be able to furnish the best White Wyandottes that this country ever saw this year, we have no hesitation in affirming. Anyone and everyone who is interested in the White Wyandotte should write us.

White Rocks We have birds at the time of writing this communication, near the middle of July, that weigh 6½ to 7½ pounds. They are a grand lot of early birds and will surely furnish you with winners for either the early shows or the later shows. As you know, our White Rocks are marvelous for their pure white color, their practically perfect type, with broad, low tails and fine heads, both in male and female. It is a pleasure to give you full detailed information when you ask it.

Buff Orpingtons We know there are many who even yet do not realize how far in advance Owen Farms are over all other breeders in America in this particular breed. We have won as many 1sts at New York as all other people combined during the last five years. We dare to say that we have made far more progress than any one in securing freedom from white and dark absolutely good surface color, and in remarkable under color, particularly in hackle and at the base of tail where so many birds fail. We are prepared to give you definite description and prices that for quality will be satisfactory to you.

Barred Rocks To all of those interested in this great American breed we feel that it is almost impossible to impress you strongly enough with the quality that we have in cockerel bred males and females, as well as pullet bred males and females. The show stock for this year bids fair to be far ahead of anything ever yet shown. We are most enthusiastic about it, because the type is as near perfect as it is ever found; long, broad backs, well spread tails, bright red eyes, with magnificent heads, and particularly good color in shank, while the barring is clear and distinct, very narrow, and altogether making exhibition birds of wonderful quality. Surely it will be advisable for you to write us concerning our Barred Rocks.

Early Orders Do you really know what it means to you to place your orders early? We have a large number of birds and we are constantly selecting and growing and conditioning birds for the fall and winter shows, and if we have your order placed with us for future delivery we select the birds and handle them, train them and get them absolutely fit for the time when they are to be sent you. On all early orders for future delivery 25 per cent only of the amount to be paid is required in advance, the balance to be paid just before shipment. I ask each interested reader: "If you receive an order to be executed in advance, can you not give better satisfaction, and do you not consider it an advantage to the buyer?" If you answer "yes," are we wrong, then, in urging you to enter into correspondence with us at once to find out what we will do, and place your order early? Catalogues sent with full information free. Please be particular to always indicate the breed you wish, and we would also thank you to always give credit to the journal in which you see our advertisement appear. Always address

Our Greatest Merchandise Sale!

Of all our Wonderful Sales of the past none approaches the one we are advertising today. We propose to give the great buying public the benefit of our wonderful operations. No other concern on earth can meet the prices we place

CHICAGO HOUSE WRECKING CO.

on our goods. We are offering the most staple merchandise at prices which in most instances do not represent the original cost of manufacture. If you fail to take advantage of this offer you are certainly overlooking an opportunity which may never again occur.

Sheriffs', Receivers' & Manufacturers' Sales!

Our WONDERFUL CATALOG

We have published a BRAND NEW CATALOG, different than any other previously issued by us. It is twice as big; it gives the history of our business and tells all about our WONDERFUL OPERATIONS; contains over 50,000 BARGAIN OFFERS in every line. Gives illustrations true to the articles described. It contains 16 pages in natural color reproductions showing all articles true to life in every detail. It describes more fully, the various articles offered in this advertisement. It is a book such as every BARGAIN SEEKING MAN OR WOMAN must have in his or her possession. If you fail to secure a copy you will make a mistake. It is FREE if you'll follow directions in this advertisement.

How to Answer This Advertisement

The best way to answer this advertisement is to FILL OUT THE COUPON in the lower left-hand corner. Tear the page out and place a cross mark on such articles as interest you most. We will then MAIL YOU OUR LITERATURE pertaining to the articles in question, as well as send you a copy of our MAMMOTH CATALOG; in addition we will describe more fully such articles as most interest you. If, however, you do not wish to mutilate this page, write us on a POST CARD, telling us WHERE YOU HAVE SEEN THIS ADVERTISEMENT, and just what articles interest you most. If your wants be in a general way only, then merely fill out the coupon in the lower left-hand corner, and we will MAIL YOU OUR GENERAL CATALOG.

Furniture

Over \$300,000.00 of high-grade, brand new furniture, carpets, rugs and linoleum; everything needed to furnish your home complete. No shoddy furniture in our stock. It is the best that can be manufactured. It is built for the taste of people who know what quality. Our goods are bought at Sheriffs', Receivers' and Manufacturers' Sales. That gives us a big advantage over any possible competition and the public gets the benefit of our buying operations. Write for prices on any article you may require. Our general catalog shows all our wonderful furniture stock. When in Chicago visit our monster furniture sales rooms, the largest in America.

Steel Roofing

100,000 sqs. of New Steel Roofing, which we are selling at the following prices: Flat \$1.50, Corrugated \$1.75, Crimped or Standing Seam \$1.85. At these prices we prepay the freight to all points east of Colorado except Oklahoma and Texas; quotations to these points on application. Our high grade Galvanized Rust Proof Roofing prices ranging from \$3.00 per square up. Write today for Free Sample.

OUR BINDING GUARANTEE

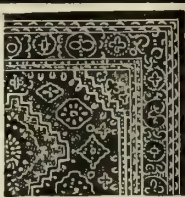

We GUARANTEE that every article you purchase from us will be EXACTLY AS REPRESENTED in every way. If you secure any merchandise from us not exactly as represented, we'll TAKE IT BACK at our FREIGHT EXPENSE and REFUND YOUR MONEY in full. We will in every instance "MAKE GOOD." We know full well the value of a SATISFIED CUSTOMER, and we will try our utmost to PLEASE YOU. We number over 100,000 customers who are regularly sending us their orders for general supplies, and we earnestly solicit just an opportunity to prove the virtue of our business for your INDIVIDUAL PURPOSE.

In every line of SUPPLIES and MERCHANDISE we can SAVE YOU MONEY, and BACKED BY OUR BINDING GUARANTEE you cannot "GO WRONG." Our CAPITAL STOCK and SURPLUS is over \$1,000,000.00. We refer you to any bank or banker anywhere; to any express company; to the mercantile agencies; to the publisher of this or any other periodical; or you can write direct to our Depository, THE DROVERS' DEPOSIT NATIONAL BANK, UNION STOCK YARDS, CHICAGO.

We will ship ANY ARTICLE shown in this advertisement C. O. D., with PRIVILEGE OF EXAMINATION, provided you send us a deposit of 25% on account as evidence of good faith, the balance after material reaches destination and you have had an opportunity to examine and see that you have secured the articles that you have ordered. If the goods are not what you expected WE WILL REFUND your purchase price, bringing goods back to Chicago at OUR EXPENSE. You are SAFE at all times in dealing with us. We would advise that you send us an order at once selected from this advertisement.

RUGS

"RINGLET" BARGAIN SALE

For 1909 steps fresh and fair into the foreground, sure of its usual welcome

My *Special Sale List* is now ready for mailing; the selections are from the *finest and largest collection of Barred Plymouth Rocks in the world today*. In this booklet, from *cover to cover*, are listed the *rarest bargains ever offered* thus far in the *history of Barred Plymouth Rocks* and at *prices surprisingly low*. The book *tells the story of the greatest values ever printed*; the birds are now in my matings, and many are

New York winners and sons and daughters of New York winners

This *Special Sale List* covers bargains in single birds, pairs, trios, pens and lots to meet the needs of all, whether wanted for **breeding** or **exhibition in the strongest competition**. They are **mated by me personally**, which insures the best results.

Customers the world over are making money with

E. B. Thompson's "Ringlets"

the most popular strain of Barred Rocks in the public mind today. The "Ringlets" will sell when no others will by reason of their matchless quality; they're known in every land and play their part in the commerce of the world.

The "Ringlets" are to Barred Rocks what the U. S. Government stamp is on a piece of gold—a Guarantee of worth and value

It will be to your interest to have this *Special Sale List* and take advantage of this *extraordinary opportunity* to buy now at the *cut down bargain prices*. It is *sound business judgment* to buy what you want when offered for *dollars less than it is worth*. It is *justice to yourself, and economy*. In short, whatever may be your wants in *Barred Rocks*, you will find it in my *Special Sale List at Bargain figures*. The List will be *mailed promptly* upon request.

Eggs from the World's best exhibition matings. *Elegant 50-page catalogue* upon application.

WAIT JUST A MOMENT

Are you in doubt about where to buy your show or breeding birds? Let us reason with you regarding the matter. First, remember we have proven all our claims, both by winning in strongest competition at largest shows and by our satisfied customers all over the land. Our

White Wyandottes

are noted for being large, pure white, grand in shape and true to the new Standard, which will be the guide in the future. We cannot afford to injure our reputation by sending out inferior stock, and we do not intend to lose by dishonest methods what we have been years in building up. If you could see the birds, both young and old, we are offering in our

Annual Sale List

you would not hesitate to send us your order. Remember our winnings at such shows as Chicago, Cleveland, St. Louis, Springfield, Great St. Louis World's Fair, Nashville, Indianapolis, Cincinnati and other large shows time after time, proves our claim of having

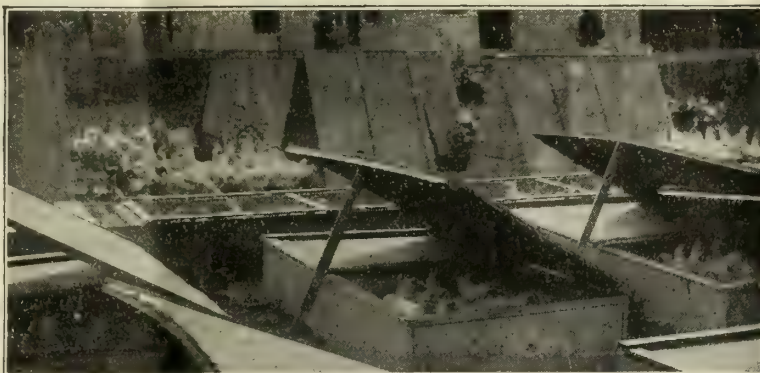

The World's Best

Our customers get the benefit of our years of labor and experience as breeders. Send us a dime for our catalog and sale list which is full of bargains you should take advantage of. Send for it today—don't wait.

THE PHILO SYSTEM

IS ESPECIALLY VALUABLE TO THE FARMER AS WELL AS THE CITY OR VILLAGE FANCIER AND IS ADAPTED TO ALL CLIMATES, ALL THE BREEDS AND PEOPLE

The Philo System is Unlike all other Ways of Keeping Poultry

and in many respects it is just the reverse, accomplishing things in poultry work that have always been considered impossible and getting unheard of results that are hard to believe without seeing. However, the facts remain the same and we can prove to you every word of the above statement.

The New System Covers All Branches of the Work Necessary for Success

From selecting the breeders to marketing the product. It tells how to get eggs that will hatch, how to hatch nearly every egg, and how to raise nearly all the chicks hatched. It gives complete plans in detail how to make everything necessary to run the business and at less than half the cost required to handle the poultry business in any other manner. There is nothing complicated about the work and any man, woman or child that can handle a saw and hammer can do the work.

Two Pound Broilers in Eight Weeks

are raised in a space of less than a square foot to the broiler without any loss and the broilers are of the very best quality, bringing, here, three cents per pound above the highest market price.

Our Six-Month-Old Pullets Are Laying at the Rate of 24 Eggs Each Per Month

in a space of two square feet for each bird. No green cut bone or meat of any description is fed, and the food is inexpensive as compared with food others are using.

Our new book, THE PHILO SYSTEM OF PROGRESSIVE POULTRY KEEPING, gives full particulars regarding these wonderful discoveries, with simple, easy-to-understand directions that are right to the point, and fifteen pages of illustrations showing all branches of the work from start to finish. It also tells how to make a brooder for twenty-five cents that will automatically keep all lice off the chickens or kill any that may be on them when in the brooders.

Our New Brooder Saves Two Cents on Each Chicken No lamp is required. No danger of chilling, overheating or burning up the chickens with the brooders using lamps or any kind of fire. They also keep all lice off the chickens automatically, or kill any that may be on them when placed in the brooder. Our book gives full plans and the right to make and use them. One can be easily made in an hour at a cost of from 25 to 50 cents.

A Few Testimonials

It was my privilege to spend a week in Elmira during August, during which time I saw the practical working of the Philo System of Keeping Poultry and was surprised at the result accomplished in a small corner of a city yard. Seeing is believing, they say, and if I had not seen, it would have been hard to believe that such results could have followed so small an outlay of space, time and money.

P. S.—A year's observation, and some experience of my own, confirm me in what I wrote Sept. 5, 1907. The System has been

tried so long and by so many, that there can be no doubt as to its worth and adaptability. It is especially valuable to parties having but a small place for chickens; seven feet square is plenty for a flock of seven.

(Rev.) W. W. COX.
Ransomville, N. Y., Dec. 5, 1908.

Dear Sir:—Last spring we purchased your book entitled the "Philo System," and used your heatless brooders last spring and summer. The same has been a great help to us in raising the chicks in the health and mortality, the chicks being stronger and healthier than those raised in the brooders with supplied heat. We believe this brooder is the best thing out yet for raising chicks successfully. We put 25,000 chicks through your heatless brooders this last season and expect to use it more completely this coming season. We have had some of the most noted poultrymen from all over the U. S. here, also a large amount of visitors who came daily to our plant, and without any exception they pronounce our stock the finest and healthiest they have seen anywhere this year.

Respectfully yours,

W. R. CURTISS & COMPANY.

Are They Worth Saving? Don't Let the Chicks Die in the Shell

One of our secrets of success is to save all the chickens that are fully developed at hatching time, whether they can crack the shell or not. It is a simple trick, and believed to be the secret of the Ancient Egyptians and Chinese which enabled them to sell the chicks at 10 cents a dozen. It takes but a minute to save a chick and no skill required.

Note What Others Say of This "Trick of the Trade"

Ringwood, Ont., Can., May 6, 1908.

Dear Sir:—Some time ago I got the Philo System and must say it is the best book I ever read on Poultry. I have tried the "Trick of the Trade" and saved twenty-two chickens which otherwise would have died.

Yours truly,

ROY MOYER.

Bethlehem, Pa., April 25, 1908.

Dear Sir:—Your book safely to hand, and have derived great benefit from it, especially "A Trick of the Trade."

Respectfully yours,

G. H. STANFORTH.

Potomac, Ill., May, 1908.

Dear Sir:—I am using your System of Progressive Poultry Keeping and consider it the best work on Poultry Raising I ever read. In my last hatch I saved twenty-three chickens by following the article, "A Trick of the Trade."

Yours truly,

FRED JANISON.

Send \$1.00 and a copy of the latest revised edition of the book will be sent you by return mail. Address

Extraordinary Clubbing Offer

\$1.50 for 75c

How to save money on poultry literature for 1909. Three of the best poultry publications, practically supplying the entire needs of a poultryman, furnished for one-half the regular price. ❀ ❀ ❀ ❀ ❀

Our Big "3" Combination

American Poultry Journal } All Three for
Western Poultry Journal } 75c
Farm-Poultry }
Regular price \$1.50

Farm-Poultry, published at Boston, Mass., is one of the oldest and best poultry magazines published in the East, and is now in its 20th volume. This magazine is always full of valuable information pertaining to thoroughbred poultry, and covers the Eastern field in a most thorough manner.

Western Poultry Journal, published at Cedar Rapids, Iowa, is also in its 20th volume, and is one of the most up-to-date poultry magazines published in the West. The two, together with the old reliable American Poultry Journal, now in its 40th volume, thoroughly covers the entire field of poultry literature, and make a poultry library in themselves.

This is the Greatest Combination Ever Offered by a Poultry Paper

and is especially so when you take into consideration the fact that American Poultry Journal will during the coming season, publish one more of those handsome colored plates of poultry, which alone is worth the price of a year's subscription to any one interested in thoroughbred fowls. This offer is for both new and renewal subscriptions. Cut out the coupon and send in your order today. Address all orders to

Twelve Months' Work in the Poultry Yard

By W. Theo. Wittman

Acknowledged by all to be one of America's Foremost Authorities and Judges

Starts you in January, and takes you clear through the year—telling you just what to do to successfully handle your fowls in the safest and most economical way that is consistent with good business methods, to make the largest success possible with your fowls.

It does not tell you how to make two-hundred dollars from twenty hens

but, it gives you a short, boiled down, and up-to-date treatise on lines that are practical and can be executed with safety. The contents of this book are intensely practicable, and to teach a method of poultry keeping, exactly opposite to that which is complicated and unnecessary. On the other hand, Twelve Months' Work has been purposely chosen to emphasize the fact that the successful poultryman will find work to do, twelve months in the year. For regularity and attention to small details, all of these, and in season, are prime factors of success in the business. Price 25 cents.

The Poultry Item The largest Eastern poultry journal, 68 to 140 pages monthly. Special breed numbers start in September and continue until May, 1910. Full and complete show awards. All the news of the poultry world, fresh and crisp.

A Year's Subscription to the Poultry Item and Twelve Months' Work in the Poultry Yard, only 50c

The Poultry Item : : Sellersville, Pennsylvania

Flower Offers Without Cost to You

Five Beautiful Roses (Order as No. 101) **Five Fragrant Carnations** (Order as No. 109)

Many of these roses when in bloom sell for \$4.00 to \$6.00 per dozen at a florist's. You get all these five varieties—Climbing Meteor, bright red, yellow Rambler, bright pink, pure white.

The carnation was President McKinley's favorite flower. This collection contains five different colors—one rich scarlet, one deep pink, one light pink, one white, one white striped with scarlet.

Four Elegant Ferns (Order as No. 104)

This collection consists of the leading varieties—Boston, Emerald, Fountain, Asparagus. These varieties frequently sell for 50 cents each.

Six Magnificent Chrysanthemums (Order as No. 102)

We will send in this collection six of the large, showery Japanese varieties, as follows—one pure white, one deep yellow, one light yellow, one light pink, one deep pink, one beautiful red.

OUR OFFERS

No. 1—Send us only 35 cents and we will send you FARM AND FIRESIDE for the rest of 1909—20 numbers—and any one collection of flowers above, prepaid.

No. 2—Send us only two subscriptions to FARM AND FIRESIDE at 25 cents each, to run for the rest of 1909—20 numbers—and we will send you any one collection of flowers above, prepaid.

These collections if purchased from a flower dealer at retail would cost you from 50 cents to \$1.00 each. (Be sure to state which month you will want your flowers sent to you.)

Our Guarantee—These plants will be large, healthy and well rooted, and will bloom this season of 1909. They are exactly as described or money refunded.

Farm and Fireside comes twice a month, and stops when your time is up. It is for the farmer and his whole family. There is no other farm paper quite as interesting, helpful or valuable. FARM AND FIRESIDE prints and circulates each month more copies than any other farm paper. That shows how well it is liked! Send your order promptly to FARM AND FIRESIDE, Dept. D, Springfield, Ohio

**GREYSTONE WHITE ROCKS**

Champions at Madison Square Garden means champions of the world; four out of six champions at last three shows. Eggs now one-half price. Grand breeders and show birds for sale.

Greystone Poultry Farm, F. H. Davey, Mgr., Yonkers, N. Y.

REGAL WHITE WYANDOTTES

Do you want the ideal Wyandotte type? The bird all curves, with well spread tail, snow white plumage and yellow legs. The Regal Strain will give you these and record laying qualities as well.

Do you want STATE FAIR WINNERS? During the past three years I have furnished more blue ribbon winners at the six largest state fairs than all my competitors combined. My own record at the New York state fair in the keenest competition; 1906: 6 firsts, 2 seconds, 2 thirds. 1907: 5 firsts, 3 seconds, 6 thirds. 1908: 6 firsts, 6 seconds, 6 thirds. Seventeen out of a possible eighteen blue ribbons in three years is a record which has never been approached by any other breeder.

At present I have 1,000 splendid chicks on free range, and was never in better shape to supply your needs.

Free: Beautifully illustrated booklet, giving description and prices of stock.

Brown & Coleman, Cheviot Poultry Farm, Cincinnati, Ohio

Blanchard's White Leghorns

are no experiment, having been carefully selected and bred for over twenty years. No labor or expense has been spared in building up and perfecting this strain, and while the production of large, pure white, fancy market eggs has been the main object, standard qualities have not been neglected. They are large, vigorous, active and handsome. Good winter layers and keep at it all summer. Unexcelled as foundation stock or for introducing new blood. Stock for sale. Eggs for hatching from my regular matings at \$2 per 15, \$3.75 per 30, \$5 per 45, \$10 per 100; from exhibition matings, \$3 per 15, \$5 per 30. Illustrated circular free.

POULTRY MEN!

GET THE BUSINESS! The poultry, poultry supply and egg business is dependent upon clever advertising methods for success. What you say and how you say it is paramount. My ads for poultrymen bring quick cash orders; they open the pocketbook and bring back cash orders by mail. They won't let go without receiving attention; they'll stick in the mind of the reader and laugh at the waste-basket. You'll get orders where you used to get talk, and you'll pull business away from the biggest breeders by means of my literature. Charges reasonable. Particulars free.

D. A. deLima, Special Ad-Writing Service for Poultrymen, P. O. Box 1615, N. Y.

Canada's Best R. C. & S. C. Black Minorcas All To Be Sold

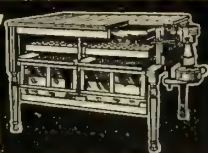

Owing to ill health we have decided to dispose of our entire flock of R. C. and S. C. Black Minorcas without reserve. All of our grand prize winners at New York, Boston and Guelph included. We believe we have the choicest flock of Black Minorcas on the Continent today, and to sell quickly we quote the following low prices: 10 grand R. C. cocks; (several of them as good as the R. C. Cock 1 paid Mr. Northup \$1,300 for.) 7 grand S. C. cocks. 50 each of R. C. and S. C. hens at \$3 to \$10 each. These hens were all used in our breeding pens the past season. 150 March and April S. C. pullets (grand lot) at \$3 each. 75 March and Apr. R. C. pullets (best we ever saw) at \$3 each. 100 March and April R. & S. C. chicks, best we ever raised, \$3 to \$10.

T. A. Faulds : Proprietor Canada's Best R. C. : London, Ont.
and S. C. Black Minorcas : :

RECORD BOOK *FREE*

It will show you how many eggs were laid today, how many chickens you are hatching, how many you raise and sell, and just what each hatch nets. Men who are succeeding in other lines of business keep such records. Why should not you, when we start you free?

Ertel's Poultry Diary has hundreds of money making pointers for the poultry man—how to have eggs and broilers to sell when prices are high—how to raise the heaviest fowls—how to take care of the flock—how to feed—how to treat sickness. The Diary tells about our new side regulators. They leave the top of the incubator entirely clear. Other improvements follow the suggestions of U. S. Department of Agriculture experts. We make low prices. We pay the freight. Get Ertel's Poultry Diary and watch the progress in incubator construction. It costs only a postal and may save you a mistake in purchasing an out of date machine. Better write us today. **GEO. ERTEL CO., Quincy, Ill.** Established 1867.

HOT? COMPETITION? NEW YORK SHOW

It was the hottest competition ever brought together in WHITE WYANDOTTES, but that is what my birds want and why I won the big end of it. They have the habit! That's a feature you want in your flock, so as to be in the firing line, challenging all comers. I shall dispose of some fine breeders this summer and shall have for the fall fairs the choicest stock I ever had. If you want to be "in it" better take up the matter now. It is none too early to get a line on the best. Stock for sale at all prices.

Write your wants to the breeder who has made possible the world's best flocks. Catalogue sent for 10 cents.

Arthur G. Duston : Box 1020 : South Framingham, Mass.

Make Money Growing Fruit

The scientific growing of fruit offers today the finest opening in the entire line of farming operations to one who wants to get ahead in the world financially, and at the same time build a home and have surroundings which will make life worth the living. The growing of fruit has now become a science and success will surely crown the efforts of one who enters this field, makes a careful study of the industry and follows teachings of many growers who make big money on fruits.

THE FRUIT-GROWER ST. JOSEPH, MISSOURI

is the leading magazine devoted to horticulture. It contains monthly as high as eighty pages of up-to-date illustrated matter, which places its readers in position to earn maximum profits on fruit. In some sections orchard land owned by Fruit-Grower readers is sold as high as \$4,000.00 per acre, and in many sections it is being sold at one thousand to two thousand dollars per acre. In no other branch of farming can land values be made so high. The lands mentioned above are worth the money, as they pay interest on the amount.

FREE LAND INFORMATION

Among the many departments in the interest of our readers is "The Fruit-Grower Land and Colony Department." It is our aim to give complete, authentic information in regard to lands in any section of the country where our readers may contemplate purchasing. This advice will be worth thousands of dollars to anyone who figures on buying land for investment or for a home. The editor of The Fruit-Grower has personally inspected many fruit-growing sections, and we are in position through our subscribers to secure reliable data regarding any section on the continent.

For several years we have been trying to secure a fine tract of land to be colonized by members of The Fruit-Grower Family. Numerous tracts have been offered us, but after sending experts to examine each in regard to soil, climatic conditions, etc., they did not come up to our standard of excellence. We will not use anything but the very best possible location for this colony, and we hope to secure the proper one in a short time. If you are interested in purchasing land either for a home or for investment, fill out blanks below and send in with our special trial coupon.

WESTERN REPRESENTATIVE
AMERICAN POULTRY JOURNAL

During the fall and winter I will be among the western fanciers and breeders in the interest of the American and can help many of you to plan your advertising and selling campaigns. The American pays its western advertisers because it covers the field. Shall be glad to hear from any breeders who are wanting to enlarge their business this season and will call on you at the leading shows or your yards, where we can confer. I have helped more western breeders to successful advertising than any other man and no matter how small your business it can be enlarged if you can supply the trade. Where it is not possible for you to get good photos I can generally do this for you at your yards or the big western shows. My trips among the breeders will be given in the American and you should write me early if you care to be included. Let me know at what shows you intend exhibiting this winter and at what state fairs you will be able to see me. The interests of the American Poultry Journal are yours and I shall uphold the past standards set by this the oldest and best of poultry journals.

POULTRY AND TRUCK FARMS

All sizes. Terms to suit. Where the little chicks can run in clover the whole year around. Have kale, cabbage, spinach, onions, radishes, lettuce, etc., out all winter and summer. Summers are long and pleasant—no prostrations. Winters are short and mild. We raise fine berries, grapes, all kinds of fruits, grains and grasses. For further particulars send 25c for a yearly subscription to the

Virginia Farmer, Dept. BB, Emporia, Va.

The Incubator YOU Want is the One that Hatches the Most "Livable" Chicks

It makes no difference to you on what principles a machine hatches—BUT it does make a difference how many "livable" chicks you get from each hatch. It is very discouraging to find at the end of the 21 days that from $\frac{1}{2}$ to $\frac{3}{4}$ of the chicks are "dead-in-the-shell" and a few days later to have "white diarrhoea" carry off $\frac{1}{2}$ the remainder. The trouble is improper hatching. What you and every other buyer of an incubator wants is a machine that hatches chicks that live. When we tell you we have that incubator we don't base our claim on theory or guesswork, but instead on actual, practical results already obtained by those who are operating our machines. For instance read Mr. Leon L. Hough's letter. We have hundreds just as strong.

Prairie State Incubators and Brooders

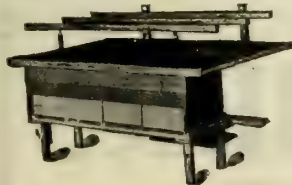

work on a different principle than any others. They copy nature almost to perfection. That's why they not only hatch more chicks and raise them, but why they hatch bigger, stronger chicks—chicks that live and incidentally they are the kind that bring you profit. You will be interested to learn how they do this so successfully. Our 1909 Catalog tells the whole story. It's free. **PRAIRIE STATE INCUBATOR CO.,** 468 Main St., Homer City, Pa.

12,000 Big Strong Chicks ● Were hatched by me in Prairie State Incubators during April, May and June this year. The hatches averaged better than 90 per cent and went as high as 98 percent. These chicks were shipped as far as 5,000 miles with only 7 reported dead in the whole 12,000. How is that for vigor? Leon L. Hough, Canisteo, N.Y.

DON'T BUILD!

that new hen house or fix up the old one until you get our large new 100 pp. catalog (over 100 illustrations) telling all about Potter Poultry House Fixtures, Perfection Feed Hoppers, Simplex Trap Nests, feeds and supplies of all kinds. Potter Fixtures have been on the market over 8 years and are used by thousands of poultry keepers. They are complete, convenient and sanitary; made in 3 styles and 12 sizes to fit any hen house.

We now make the complete line of PORTABLE (K.D.) HOUSES, BROOD COOPS, PIGEON LOFTS, etc., formerly made by the Morgan Sanitary House Co., of Lemont, Ills. These are made in 20 different styles and sizes, and if you want a complete, up-to-date and cheap house or coop of any kind you

should not fail to send for large illustrated catalog telling all about these goods.

DON'T KILL or sell your laying hens; use the POTTER SYSTEM and pick out the layers from the loafers and keep only healthy laying hens. The Potter System is the greatest discovery of the century in the poultry world and is used by over 25,000 poultry keepers. You can save dollars every year by using our system, because you keep only layers.

Our new 100 pp. book entitled "Don't Kill the Laying Hen" is a revelation to poultry raisers on the subject of laying and non-laying hens and egg production.

Potter Poultry products are for Particular Poultry People, and if you are particular and want to make more money on your flock you will write today sending 2 red stamps to cover postage on our large catalogs and circulars.

METAL MOTHERS

OUR NEW DISCOVERIES MAKE

POULTRY KEEPING EASY AND PROFITS SURE

OUR MACHINES were used exclusively in the original Philo System plant where over \$1500 FROM 60 HENS IN TEN MONTHS. has been cleared from the sale of eggs, baby chicks and fowls raised on a city lot 40 feet square. One of the largest hatching plants in America saved over \$700 this year by using our System of brooding. We sell the best brooder ver made for only \$2.50.

One party hatched and raised \$500 worth of poultry last year with four Metal Mothers, and hundreds of others are delighted with our machines and our new way of raising poultry. Our combined machine hatches and broods perfectly at the same time with only one lamp and one-fifth the oil used in other machines. Once filling the lamp completes the hatch. It runs as steady as a clock in any room from cellar to garrett, and our Long Burning Safety Lamp runs on for weeks without attention. It is the only machine that airs the eggs in the natural way and applies the heat to the chickens like the mother hen.

THE BROODER-HATCHER

OUR 1909 PATTERN METAL MOTHERS

are the perfected results of the latest discoveries in artificial incubation. They will hatch hens, ducks, turkey and goose eggs equally well and at the same time. Regulation of moisture and heat entirely automatic. One Metal Mother complete \$7.50; two, \$14; four, \$24. One Hatcher complete \$5; two, \$9; four, \$17; six, \$24. Catalogue free.

The Cycle Hatcher Co., Elmira, N. Y.

Dear Sirs:—As per your letter I will send you an order for six machines in a few weeks. Am hatching with the one I now have. Got 47 chicks from 50 eggs. Have abandoned all my 200-egg machines. Am practicing in my store with a view to starting my 40-acre poultry plant near town here. Think I can sell a lot of these machines next year.

H. W. White, 311 Ada St., Yankton, S. D.

The Cycle Hatcher Co., Elmira, N. Y.

Gentlemen:—The hatcher we bought of you last May is all right. We took off two batches with it; one of 43 chicks and one of 46 chicks. All good ones.

Yours respectfully, G. W. Simpson, Austin, Pa.

The Cycle Hatcher Co., Elmira, N. Y.

Sirs:—You people may be interested to know what an experiment with one of your Metal Mothers has done for us. On the 17th of Oct. we put 40 eggs in your machine, 38 of them being fertile, and when hatching time came we were surprised to find 38 chicks from our 38 eggs. This we think an excellent record, for the machine had been placed out in the open weather, the only protection being an old tin covered box. Yours respectfully,

J. P. & L. L. Hollinger, R. I. Red Farm, Witner, Pa.

IMPORTANT FACTS ABOUT CHICKEN RAISING

Healthy Parent Stock the First Essential to Success—The Different Feeds and How to Feed Them—Early Hatched Pullets Necessary if Early Layers Are Desired—Disinfecting the Incubator After Each Hatch

Written for American Poultry Journal by S. M. Dickinson, Granville, Ohio

IN THE interest of some of your many readers that have in the past, and possibly are at the present time, perplexed in regard to the non-success they are having with their poultry, I take this opportunity of trying to set forth a few important facts relative to the general management and care of poultry, in order to best explain, and to start those of your readers that really care to take something from one that has studied the business I can best explain by telling them as near as I possibly can how I started and do now conduct my plant. From a youngster I realized the great stumbling block

concerning poultry, namely, the great mortality. Here I wish to write just a little of what one reads in the average poultry journals. One Mr. So and So writes, "Do not feed chicks and chickens wet mashes." Next comes another claiming they must have certain kinds of grit. Some go even so far as to say (and supposedly very learned men) one necessary spark is there, all the high priced foods, incubators, brooders, fine poultry houses, money or lack of money, experience or lack of experience, this man's strain or that one's strain, you will find it is all of no avail, for a well hatched chick from healthy parentage is about as husky a thing as anything that draws breath. Therefore I say first, last and for all time to come look to the parent stock. Now you can start your feeding and care. I try to keep my birds reasonably free from lice. As a general thing I keep all coops and houses clean. Do not feed all hard grains. Mashes, such as vegetables with bran, shorts, cornmeal, clovers, small amount of commercial beef scrap, is a good feed and keeps fowls in healthy condition. Grains should be fed at all seasons in deep litter. If you have not natural grit you should supply it in some form. Make your chickens work. This is the keynote to good health. I am convinced that the grain ration will give you no better results than all soft foods, for I have this season made careful inquiry concerning different breeders' success, not only locally but in other states, and I find those feeding some mash and some grain are the ones getting the desired results. In short, variety is what our fowls need. Now it just took me one short season originally to learn that hens do not lay during the winter months, namely, November, December and January, for eggs in these months come from early hatched pullets. Why don't my pullets lay? Why don't my hens lay? is a question. I get constantly during these months. To them I say, the average hen does not lay during these months, or your pullets are too young. "Why," some say, "my pullets were hatched in April

May and June." Now, I am not the king bee in the poultry world, but I dare say I've hatched more chickens in my time than many others that are better known, and right here I make the assertion that where there is one pullet of any breed hatched during April, May and June that lays before February or March there are thousands that do not. No, it takes the January, February and March hatched pullets to give us the eggs in November, December and January. Now some will ask, "You say hens do not lay during these months; why is it?" Well, fellow fancier, a pullet starts to lay in the fall or early winter. She lays during all these months and into summer. Nature then demands of her to take a rest. She does so through moulting. She does so during the hot days of July, August and September. As a general thing she grows her new plumage as she sheds the old, which often takes her until late December until she has entire new coat of feathers. She then enjoys a little rest and generally will commence laying in February. Knowing this from years of experience, I have my chicks hatched during January, February and March. Breeds such as the Americans should never be hatched after March to be profitable from all sources. I always watch those chicks hatched early and give them special attention. Those pullets showing best development are placed in my breeding pens and bred from during January, February and March. This method after a number of years has given me a good egg yield during the winter months, and again it is that that has made me well known as a breeder of big White Plymouth Rocks. But, my friend, it is not enough that you should hatch early. Remember always that early chicks need constant attention. Keep them growing. Feed sparingly for the first month. After that it is rather a questionable matter if you can feed too much. Heavy feeding will unquestionably stunt your chicks the first four weeks. I feed chicks at start egg and bread crumbs, then pinhead oatmeal and cracked wheat with a very small portion of cracked corn, generally mixed in a little chick size charcoal. Don't forget small grit. I never put over thirty chicks in brooder or colony house, and get them to roost as early as possible. Crooked breast bones mostly come from squatting on hard floors. The theory with me is when a chicken is on a roost it is compelled to grip the roost with its claws, therefore it holds its weight from its breast, although it is possible for a chick to inherit it. I have proven this to my own satisfaction. In hatching with incubators I never immediately reset a machine until I have thoroughly disinfected it and aired it for several days. I have seen many wonder why all their chicks would die after having a splendid hatch. I have examined machines and on entering hatching place knew the reason at once. Machine had become foul; not that the machines were necessarily in dirty condition, but the fumes and gases had so thoroughly penetrated every portion, crack and crevice of the machine that it was impossible to hatch a healthy chick. I do not yard my pullets until sixty days before wishing to use their eggs, keeping them on free range until that time. I am very careful never to use an unhealthy bird in breeding yards. In conclusion I will say, hatch early, feed sparingly for first four weeks, then feed liberally. Keep as few chicks together as possible. Get them to roost early. Give free range as long as possible. Under no circumstances use a bird that does not show vigor. Do not try to force if your birds don't lay just as soon as you think they should. Feed a variety. Make your fowls hustle. Learn to breed good birds before you advertise heavily, then use a good pulling journal such as the American Poultry Journal. Be just and reasonable and demand the same from others.

Thirty-fourth Annual Meeting of the AMERICAN POULTRY ASSOCIATION

NIAGARA FALLS

AUGUST 10-12-09

The Largest and Most Representative Meeting Held to Date. The Complete Revision of the Standard of Perfection. The Adoption of an Association Emblem, and the Adoption of the Half-Tone Illustrations. The Most Important Work Accomplished.

Written by H. P. Schwab, Eastern Representative A. P. J.

THERE are just two great American birds. The American eagle, our bird of pride and of national sentiment. Long years ago, from a bird of war, he has been transformed into one of peace, and his only shriek is one of good will to all nations, and the people thereof. May he ever remain so, is our fondest wish and hope. With his talons fastened on the peaks of the Alleghanies in the east, the other on the giant Rockies of the west, he stands gloriously nibbling at our northern boundary, while his tail basks in the sunlight of the Guelph and Panama. His spreading wings fan the breezes of Manila Bay and of Porto Rico. Truly he is a great bird, and in his mission which has brought to him respect we can live content.

The other great

bird is the American Hen, whose part in our commercial success cannot be over-estimated. She also is the bird of our pride, and the success of thousands upon thousands of our people. Both these birds are to our advantage, both are a necessity. Without sentiment, we as a people would have a poor excuse for living, and without the standard bred hen, no excuse whatever for existing.

The Government experts tell us that the value of eggs and poultry last year amounted to over \$400,000,000. Can we now, and at this time, without drawing comparisons, fully understand the magnitude of these figures, and the value of the same in comparison with the value of our other products? This in itself would require several pages, and as we have the events of the meeting to chronicle at this time, the meeting representing all the poultry interests, so we will for now pass this over and leave it for the reader to comprehend the value and importance of the poultry industry in our country.

As stated, the meeting of poultrymen gathered at the Falls truly represented the poultry interests. The American Poultry Association is the official representative of these mammoth interests. For thirty-four years its one object has been to improve the value of poultry from every viewpoint. That it has succeeded is attested by the

attendance and the interest displayed at its meetings. Breeders from all sections came, something over 130 strong, and, taken all in all, it was not only the largest meeting to date, but the classiest as well. The members came from 25 States and Provinces. From Ontario and Quebec to Texas, and from Rhode Island to Kansas. The number of ladies attending was a feature, and if we enumerated these, we could well say that over 200 interested persons attended.

The most important business to come before this meeting was the revision of the Standard of Perfection. The committee on revision, Messrs. Kimmey, Russell, Smith, Hewes, Denny and Butterfield, had labored long and hard at Chicago last spring, and their recommendations were here presented in a proper form, and in a way, that when we consider the kind and amount of work given them, we gladly admit, they did well and deserve due credit for their splendid efforts. Next in importance was the question of illustrations. Half-Tones vs. Line Drawings. Here was an opportunity for oratory on both sides. Mr. Hare's eloquent plea for the line-drawings was only defeated by what had been seen and displayed by Artists Schilling, Stahmer and Burgess in their beautiful half-tone models. The half-tones won the day.

Before going further and touching upon the meeting proper, we want to in this public manner pay our compliments to the presiding officer. President C. M. Bryant deserves great credit for his work. He had the meeting under splendid control at all times. Often being placed in a position to rule on important questions of law and policy, he was never found wanting. Always affable and impartial. The meetings gathered early each day, and from then to midnight and often after, he was always there, untiring in his efforts, and when the end came the convention voted its thanks to Mr. Bryant in such a whole-souled manner that we are assured that our sentiments are entertained by all.

The Falls of Niagara.

Niagara Falls may well be called the Convention City. It is always in holiday attire. Here it is estimated that yearly over 1,000,000 people come from every corner of the earth to see one of nature's grandest wonders. Once to see is never to forget, and each time seen, it produces new desires to visit it again.

From our room at the Tower House, on the edge of the reservation, and but 600 feet from the falls, we could hear the roar of the mighty cataract, as the waters madly swept over on their way to the sea. Our desires to again view the Falls led us there early on Tuesday morning, and we sat long, looking, thinking and listening, while the words of the poet came vividly to us:

"Like a dronney wind in pine woods,
Like a mighty roaring sea."

This expressed our thoughts as well as words could, and we then became interested in some figures relating to this, the grandest and most famed water falls on earth. The fall in the river from Lake Erie to Ontario is 326 feet. The Falls are 167 feet high and the rest is accounted for in the rapids, both above and below. The average depth of the river is 180 feet. Fifteen million cubic feet of water pass over every minute. This would equal a cubic mile of water a week. It is estimated that it has taken the river 75,000 years to cut away the stone and form the gorge that extends to Lewiston, seven miles away. So much for now. We may give more in future as through the kindness of our friend, George Urban, Jr., of Buffalo, we had the pleasure to be one of the several parties to enjoy a trip to all places of interest and to visit some of the power houses where Niagara's power is utilized for the direct benefit of mankind.

Ontario Well Represented.

One of the pleasant features of the meeting was the large attendance of members from Canada, and judging from all we heard they had a royal time. Both our retiring and newly elected vice-presidents came over, and President Bryant wisely gave both an opportunity to preside. The veteran, William McNeil, and the near veteran, Dick Oak, were both there, and were heard. Sharp Butterfield was busy all the time, still he found time to tell the writer much that happened at the first meeting of the American Poultry Association in 1874 at Buffalo, N. Y., during the show there, at which he was one of the judges.

The Executive Committee Meetings.

The executive board held several meetings before and during the regular meeting. At the Monday morning session two members were expelled and one was suspended for a year from membership. In the case of Ross C. H. Hallock, who was expelled, I believe our readers are posted, and that the action taken will meet popular approval. In regard to the two other cases we prefer to wait for the official report of the Executive Board, as it would hardly be fair to all concerned to make

special mention until we have the official facts before us. The action taken by the committee appeared to meet with approval. Other questions, notably that of judges' licenses, received proper attention, and in our opinion the present system has been greatly improved upon. In future the applicant and the persons that recommend them will have a regular form to fill out pertaining to the qualities and experience of the applicant. The adoption of a design for an association emblem was also their work. While a very pretty one was selected, it is still our opinion that this question should have come before the meeting and that all should have had their say in this.

The Revision Committee.

The revision committee held several sessions daily, as well as nightly, and as a rule had all matters promptly in shape as called for. The breeders, as will be shown, were not quite ready to eliminate the color disqualifications from the standard as presented in their report, and if memory serves us correctly, the new standard will contain more causes to disqualify than the old one did.

The Meeting.

The meeting was called to order by President Bryant at 9:30 on Tuesday morning, August 10. The following members answered the roll call.

Connecticut—David A. Nichols, R. C. Tuttle, F. H. Stoneburn, W. H. Card.

District of Columbia—Robert R. Slocum, Miss Sophie Pitchlynn.

Illinois—Miller Purvis, F. C. Hare, Frank Heck, George H. Rudy, Louis A. Stehmer, J. W. Bell, Fred L. Kimmey.

Indiana—W. C. Pierce, C. W. Zimmer, A. E. Martz, Charles I. Fishel, J. C. Dinsmore, Theo. Hewes, Irving A. Sibley, Frank Churchill Sibley, J. C. Fishel, U. R. Fishel, C. S. Byers.

Iowa—W. S. Russell, E. E. Richards, Thomas F. Rigg, H. C. Pierce, D. W. Rich.

Kansas—N. R. Nye, A. G. Philips, R. V. Hicks, W. A. Doolittle.

Maine—George P. Coffin.

Maryland—O. E. Remsen.

Massachusetts—John H. Robinson, W. B. Atherton, Maurice F. Delano, A. C. Smith, Lester Tompkins, C. H. Latham, Victor W. Bradley, Charles M. Bryant.

Michigan—Earl Hemenway, Frank W. Traviss, J. S. Crawford, George F. Barnes.

Minnesota—H. A. Nourse, J. D. Holden.

Missouri—Henry Steinmesch, T. E. Quisenberry.

Nebraska—H. P. Rankin.

New Jersey—H. V. Crawford, Charles D. Cleveland, Charles Nixon, J. H. Wilson, E. E. Cooley, J. H. Wolsieffer.

New York—Mrs. Allen, Buchanan Burr, J. H. Drevenstedt, C. C. Depew, W. C. Denny, J. P. Miller, W. G. Krum, W. F. Brace, E. M. Green, A. O. Schilling, George H. Burgott, F. H. Davey, M. S. Gardner, Henry Trafford, E. L. Andrews, F. W. Corey, E. M. Santee, E. B. Thompson, J. F. Knox, James E. Rice, W. F. Briggs, H. P. Schwab, Grant M. Curtis, Henry J. Haight.

Ohio—Phil Feil, Charles McClave, Eugene Sites, F. S. Hahn, H. W. Jackson, George Johnson, Thomas S. Falkner, C. E. Cram, I. A. Freeman, S. T. Campbell, George Johnson, L. C. Taylor, Alfred G. Clark, C. Howard McClave, C. L. Stiles.

Oklahoma—W. P. Smalley.

Pennsylvania—H. D. Roth, J. W. Morrow, A. F. Kummer, J. D. Koons, T. F. McGrew, George F. Foster, H. L. Watson, W. H. Moore, F. W. DeLancy, J. L. Purple, Howard L. Davis, F. G. Weil, J. W. Poley, J. L. Nix.

Rhode Island—D. J. Lambert.

Texas—C. P. Van Winkle.

Virginia—C. K. Graham.

West Virginia—Thomas S. Meek, Horace Atwood.

Wisconsin—R. W. Burgess.

Ontario—George Robertson, Joseph Russell, J. A. Bennett, I. K. Miller, L. H. Baldwin, W. R. Graham, H. B. Donovan, H. A. McAller, Newton Cosh, Richard Oke, S. Butterfield, William McNeil, J. J. Hare, A. Hockin, J. S. Martin, S. Henderson, Quebec—F. C. L. Ford.

The report of the Secretary-Treasurer was adopted as read.

The repeals and amendments to the Constitution and By-Laws were then taken up and with very few exceptions were dropped in the waste basket. The article relating to Secretary-Treasurer was changed and now calls for a Secretary and a Treasurer, the latter to be appointed by the Executive Board.

Each year freak amendments crop in, and this year was no exception. The call this year was in each case for the father of such and as most of them were disowned they went quickly by the board, although most of the first day was spent with this work.

The report of the Election Commissioner (which has been printed in the poultry papers), the election of the Board of

review, the appointment of Credential Committee, the report of the Secretary-Treasurer, the report of the Financial Committee and the reports of each branch association came in rapid succession and were approved.

The evening session was given over to the reading of a paper from I. K. Felch, an able address by J. H. Robinson on "The Poultry Show Problem," and by T. S. Meek on "The Poultry Institute Problem."

The Revision Begins.

Wednesday came in beautiful and with it the revision work began in earnest. The score card as presented was adopted with the exception that the section for wings was moved up next to neck section, as it should be.

The disqualifying weight clause remains just as it was December 1, instead of November 1, as the committee suggested.

Messrs. D. J. Lambert and J. H. Robinson spoke in favor of the decimal score card, wishing to have it adopted and giving to the associations the privilege to choose between the two cards. Their efforts were defeated by a vote of 61 to 30.

The question of handicapping the solid colored birds, when competing for Sweepstake prizes, was the beginning for a long debate. The wisdom of W. E. Russell finally prevailed and his motion to handicap the white birds 2 points, the black $1\frac{1}{2}$ points and the buff 1 point was adopted.

Side sprigs, feathers on toes and legs, more or less than the required number of toes, color of legs and toes, crooked back, and in the American class any specimen over 2 pounds under weight will disqualify.

The standard weight of the Plymouth Rock pullet was changed from $6\frac{1}{2}$ pounds to 6 pounds for the future. The carriage of the tail of all the American varieties in males was placed at 45 degrees from horizontal, and in the female at 35 degrees. This is lowering the tails 5 degrees. Some insisted upon a further reduction, but the great majority of members thought this the correct angle and it was so adopted.

Down between the toes of all American varieties will also disqualify. We were particularly pleased to see this pass, for it removes the last question of doubt and gives no argument a chance as to what is, and what is not down.

The color disqualifications in Barred, White and Buff Plymouth Rocks are the same as before. In the S. P. Rocks white in ear-lobes, and shanks other than yellow or dumky-yellow will disqualify.

Wyandottes.

The Wyandotte question was another that tested the endurance of the breeders present. The color of eye in particular received special attention. The final outcome was that the eye should be red or reddish-bay, in all except the blacks; theirs was unchanged.

Another question that was long drawn out was the question of white in ear-lobes. The new rule is that more than one-quarter enamel white in the ear-lobe, or shanks not yellow, will disqualify. We think this in regard to white in the lobes is an injustice to the breed. Believing them to be beyond the experimental stage, we can't see why they should ask and be granted special legislation. The past spring I had the pleasure of visiting several of the largest breeders of the East, including Mr. Cleveland and Mr. Duston, and I don't recall of seeing at either place a bird that required any easy terms used in regard to their lobes. I am positive of this in particular as regards their great winners and all their best mated pens.

The question of "Deck Feathers" was relegated to the rear in every case, and in its stead the words "Two top tail feathers" adopted.

Some slight changes were made in regard to the description of the breeds and in the main in this respect the report of the Revision Committee was adopted. The color disqualifications remain as before.

Rhode Island Reds.

The unexpected happened in the case of the Reds. Here is where the great battle was expected to be fought. Decks were cleared for action and President Bryant called upon Vice-President Donovan to take the chair, so that he, too, could enter the fray if need be. The Revision Committee made its report, not the one they had adopted at the Chicago meeting, but one agreed on with the committee of the Red Club, and it went through a-flying. The ticking remains in the hackle of the female, and there was real rejoicing in the Red camp that night. With these three varieties settled, the future looked rosy to us all. A long day of three sessions had been devoted to this work, and with but one more remaining day, the members retired determined to be on hand early, and to work for the completion of the great work they had set out to accomplish.

The shape of the Leghorn male and female was adopted, as reported and printed by the Revision Committee. Their color description also met with approval. Here again the convention set upon the mention of deck feathers and in its place will

use the words "Two top tail feathers." The disqualifications for the Leghorns remain as before.

The only change of note made in this entire family, was in the Silver Duckwing Leghorns, which in future will be known as Silver Leghorns.

At this time S. T. Campbell was installed as Secretary and read his inaugural address. Mr. Campbell expressed himself forcibly on several very important matters, and his efforts received the generous applause due. We have requested a copy of his address and hope to give it in our next issue.

President Bryant also before the noon adjournment announced the standing committees as follows:

Revision Committee—Messrs. G. M. Curtis, Theodore Hewes and William McNeil.

Finance Committee—Messrs. C. M. Bryant, D. A. Nichols and G. D. Holden.

New business being next in order, according to program, the revision work was tabled and the convention proceeded to elect an Election Commissioner. F. L. Kimmey being nominated, he received the entire vote cast. A compliment well earned, and one we are assured will meet the approval of every member of the association.

Mr. Hare offered a resolution relating to future amendments to the Constitution and By-Laws of the Association, which was quickly adopted. This will take the joker out of this part of the proceedings in future and compel the author's name to be printed with the proposed amendment.

Charles D. Cleveland offered resolutions of respect and well-wishes for the speedy recovery of F. L. Sewell. After their adoption G. M. Curtis read a letter he had just received from Mrs. Sewell reporting the improved condition.

W. B. Atherton reported resolutions on the death of Messrs. Philander Williams and Henry S. Ball, while Mr. McGrew offered same for A. P. Grove, also that suitable resolutions be spread on the minutes for the death of B. E. Pierce. All these resolutions were adopted with a rising vote.

C. D. Cleveland's motion for a committee of three to investigate and report at the next meeting, regarding probable action to be taken to insure better rates and better care in the shipping of poultry, eggs and baby chicks, was adopted and the chair appointed Messrs. C. D. Cleveland, W. R. Curtis and A. G. Clark. This committee asks for the cooperation of every member. We believe much can be accomplished in this line, and trust that every member will make it a special point to aid the committee in every possible way.

On motion of G. M. Curtis the editing committee for the new Standard be Messrs. Kimmey, Bryant, Nichols, Denny and Sewell, and that they receive \$5 per day and traveling and hotel expenses, was adopted.

At this time Vice-President L. H. Baldwin was introduced and delivered his inaugural address, after which we had the pleasure of seeing him in action as presiding officer. He, as well as his predecessor, Mr. Donovan, are capable men and a credit to the fancy.

Back to the Revision Work Again.

New business being finished, it was back to the drill again, the short respite had been enjoyed, and as the end drew in sight the final effort was made to complete the work that day as had been planned.

The committee's report on Minorcas was read and adopted with little discussion. Either red or white in the plumage of the Black will disqualify. The usual color disqualifications remain in the White variety.

The Buckeye standard was left very similar to the old one. Medium was added to comb and wattles, and in future red on the outside of the legs will not be considered a defect.

Silkie and Sultans were taken from the miscellaneous class and placed in the Bantam class.

In regard to the Orpingtons, the Red Caps, Indian Games, Sumatras, Crevecœurs, La Fleche, the Standard was adopted as printed in the report of the Revision Committee, also the Malays and the Malay Bantams.

Several new breeds were proposed for admittance to the Standard, and but one, the White Laced Red Cornish fowls were admitted. The Partridge and Columbian Plymouth Rocks and the Buff Orpington Ducks failed of entry on account that the Association rules had not been fully complied with.

The breeders of these varieties have themselves to blame. They must know the rules, and they should be willing to comply. The Partridge Rocks we have seen in the shows for several years, and have noted the improvement made in them, and for this reason we were very anxious to have them admitted. In cutting for defects, where foreign color disqualifies when feathers are broken, the cut will be from 1 to 3 points. The over-weight clause was also eliminated from the Standard.

This really finished the revision work, and all hearts were glad. Here a motion was made for a committee of three with

the Secretary as chairman to attempt to get a reliable poultry census. This committee consists of the Secretary and Messrs. H. G. Pierce and Prof. Rice.

The question of half-tones vs. line drawings to illustrate the new Standard was next in order and promised to again keep up till midnight. The debate was rather warm as it appeared to be a boxed-up job to many. Those taking the leading parts were Hare, Smith, Delano, McGrew, Curtis, Fishel, Bearman, Sibley, Sculling, Stahmer, Denny, etc. The half-tones won out regardless of cost. It was also voted to have five color plates of feathers in the Standard in their natural colors.

The half-tones will be first submitted to the officers of the specialty clubs for approval or alteration before the next meeting.

After a cheering vote of thanks to the President, the motion to adjourn was carried.

Seen and Heard at the Convention.

One of the features greatly enjoyed was the course of lectures held daily. Mr. Robinson's paper was a strong effort, containing much valuable advice for reference. We hope to give this in full in our next. Prof. C. K. Graham's talk and figures also proved interesting in showing the progress made in educational lines, will refer to this again. Secretary Campbell's address should be published in every paper. There is much in this to think over. We have just received copy for our next, in which we also wish to comment.

The press was grandly represented at the meeting; in fact, it was a round-up of all the scribes. Mr. James W. Bell, wife and daughter, and Messrs. Stahmer and Zimmer represented the American Poultry Journal; W. B. Atherton and Drevenstedt of the Stockkeeper; J. H. Robinson Farm-Poultry; G. M. Curtis and Schilling the R. P. J.; then there was Miller Purvis, F. C. Hare, Frank Heck, Theodore Hewes, E. E. Richards, R. V. Hicks, George S. Barnes, H. A. Nourse, H. D. Rankin, C. C. Depew, E. M. Green, Henry Trafford, C. E. Cram, F. W. Delancy, J. L. Purple and H. B. Donovan.

The "Ringlet" auto, a 48-H. P. 3-cylinder Winton touring car, arrived at 2 P. M. on Tuesday, with E. B. Thompson, his nephew, two sons and a friend aboard. Leaving Amenia, their run of 450 miles across the State was made without a mishap. Mr. Thompson and party greatly enjoyed the trip, passing as they did through the entire length of the State. That the "Ringlets" still soar was very evident to all. Mr. Thompson reports a most satisfactory trade and a grand lot of youngsters coming along rapidly.

Some years have passed since we have met U. R. Fishel. I believe he is like his chickens, and improves with time. Time surely sets lightly on him. Mrs. Fishel and a niece accompanied him. Mr. Fishel expressed himself as pleased with the new Standard, accepting it as a betterment for the breed. He reports plenty of early birds for the early shows, and promises quality better than ever.

The Honorable David A. Nichols is bound that the place he calls home won't be forgotten right away. He came loaded for home-seekers with a trunk full of wooden nutmegs. The Senator is now interested in a new variety called Kik-A-Poo-Sag-Waughns. Their chief characteristics are they are boneless and dry-pick very nicely.

The Owen farms were represented by Supt. M. F. Delano and Newton Cosh. Mr. Delano was heard to advantage several times during the meeting, the outcome of which met his approval. The few changes made in Barred and White Rocks, White Wyandottes and Buff and Black Orpingtons suited him to a T. These are the Owen Farm's varieties that promise better than ever before. They now have cockerels weighing 7½ pounds, and in both quality and quantity are most satisfactory.

Charles G. Pape and wife, of Fort Wayne, Ind., came as far as Cleveland by auto, and then by boat to Buffalo. Mr. Pape breeds Single Comb Black Minorcas that are generally known this country over. He reports a splendid season and a choice lot of young.

Invitations for the next meeting came from Detroit, Buffalo, St. Louis, Toledo and Niagara Falls. Our own Henry Steinmesch promises 100 new members if the meeting is held in St. Louis. If Henry will insure us a comfortable week along with so many new members, it would seem as if he has baited his hook about right. Buffalo also has claims on us that must be considered.

There are nigh onto a million of Smiths. But only one A. C. Smith. Arthur was on the jump all the time. He was the

Mass. Delegate, member of the Executive Board and the Revision Committee, Delegate and secretary-treasurer of the American Plymouth Rock Club, and we also learn from Mr. Bright, at odd times manages the Grove Hill Poultry Yards. Whatever time he does give to the Grove Hill Barred Rocks and Single Comb Brown Leghorns must be well spent, for they have a reputation and name that is respected.

M. E. Corey and wife (Rock Hill Poultry Yards) were old friends we were again glad to meet. Mr. Corey has during the past few years brought his birds to a most prominent position by his New York and Boston winnings. He has a large flock of early hatched birds in White and Columbian Wyandottes, Single Comb White Leghorns and S. Plymouth Rocks.

This was our first meeting with J. C. Fishel, the White Wyandotte specialist of Hope, Ind. He appeared to us as contented with the world, his chickens and the new Standard, and enjoyed his visit greatly.

R. C. Tuttle, the Red man from Connecticut, had a busy week, his efforts told strongly at the meeting. All the Red men stood as one and received their full measure of due.

Irving A. Sibley and F. C. Sibley were heard to advantage. They are both Red men, and all is not told yet. The progress this variety has made within the few years of their life is one, to be proud of.

C. S. Byers, of Hazelrigg, Ind., one of the leading Orpington breeders of the west as well as an Orpington judge, was there to meet the boys. His winnings at the last Chicago show are well known to our readers. His special sales list can be had for the asking.

Lester Thompkins, Concord, Mass., one of the original Redmen of the East, carried his usual smile and wore the inseparable red tie. Mr. Thompkins has made his reputation not only as a breeder, but as a judge as well. His work at the New York show has received most favorable comment.

Victor W. Bradley, of Bradley Bros., Lee, Mass., attended. Their recent fire only consumed their barns, and none of their hen houses or stock was burned. They have over 1,400 youngsters, which look particularly good at this time. The past season proved their banner year. Our readers are pretty well informed with this line. Bradley Bros. are favorably known wherever Barred Rocks are bred.

The sage of "Sunny Brook," C. D. Cleveland, of White and Columbian Wyandotte fame, was busy looking to the interests of his favorites. At the time of our visit to his home early last spring he had a large lot of young, and it is needless to say at this time that his quality is right. He had the matings that were sure to produce improvement.

J. W. Poley, the Buff Rock man of Pennsylvania, enjoyed himself, we believe, as much as any one there. His smile of complete satisfaction was of the kind that don't come off. He is fully contented with his birds and the world in general. He carries the New York Blues home very regularly.

Among other Pennsylvania members we found J. D. Koons, breeder of Buff Wyandottes. This variety when seen at its best is one of our beauties; they also combine quality that will always endear them to the fancier.

From Port Dover, Ont., came John S. Martin. His White Wyandottes have been shown over here at some of our best shows for years. He reports a grand lot of chicks, and we hope ere the season closes we will again find him competing at our shows.

Joseph Russell, of Toronto, passed the week with us. He breeds White Wyandottes and Rhode Island Reds. We have met him at Ontario and at New York and Boston. I believe Joe will be over again to try conclusions with our best.

C. H. Latham, after getting over the effects of the water, fully enjoyed himself. Charlie reports the usual amount of young stock and that they look most promising. Business has been very satisfactory.

There were many more of "Our Folks" there, but time and space forbid further mention at this time. We hope to include all in our next.

WHO'S WHO IN HENDOM

I N mulling over the various states that have produced Who's Who folks in usual and unusual numbers, we stumble onto the Minnesota-Nebraska territory, where they grow on fence pickets and the true fancier's enthusiasm runs from the foot of ever hill. Think not, gentle reader, that I am over-careless in stating that these things be so. They are true, so there's an end on it! No states have made greater strides in the numbers and quality of their fanciers and breeders during the past ten years than have these gems set in the great bread-basket of these United States.

With the henists out there, it is chicken, chicken all the time. They have the largest memberships of any county associations and their shows are some of the biggest and best in quality of any county shows anywhere.

Meetings?

Well, I should say they do meet!

They have monthly meetings to keep things alive during the summer, and when show time approaches they hold them twice a month to weekly. A few days before their shows they hold meetings daily; in fact, a meeting of the association can be called anywhere there are two members at one and the same time. This is what counts for the enthusiasm.

Not long since I helped place the ribbons in a county show that had a name big enough to kill it dead—stone dead. It was their first attempt. We had out four hundred birds; and the weather being fine, I scored these birds in two days and had some thirty hours to spare before I planned to depart. The next day was devoted to a lecture for the fanciers and breeders. We had a full house. Everybody in the country who knew a chicken from a duck, and all the farmers' wives who knew enough to shut up their geese in camp-meeting time, were out for the gabfest, for everything was informal and the question box had its lid pried off and burned up. We were all there to get as much good from the meeting as was possible.

During the talk I noticed that the secretary was not present, but thought nothing of it, as the work was being cared for in his office. He was in his office the last I saw of him. The next morning he came to tell me (over at the Transit House) that there were forty loads of chickens from the farmers' wives, that had come in late but nevertheless were to be scored! Well, they had purchased our time and had a right to it, so we waded into the fuss and feathers.

The idea I am trying to bring out is that the westerners knew where they stood. They knew that chicken judges cost money and they saw that I had the time and was a right smart willing, so they added some shekels to their treasury without the least expense. During the gabfest the secretary had been at the telephone calling up all the farmers' wives who had pure-bred chickens and getting them to promise they would bring them in the day following to be scored at 15 cents each! That secretary was re-elected. He had a head on the top of his frame that was working every minute. And his enthusiasm only goes to show that the whole bunch of chicken cranks out there are alive to the opportunity and know their chicken X, Y, Zs.

Let's take a whack at Nebraska and have done with her.

She is a great state from her fertile prairies and rolling ground in her eastern half to her stately sandhills and parched creek beds of her farthest west. Everybody out there raises chickens. Grain is abundant, alfalfa grows in the streets and in the alleys, the all-sheltering dome of the blue and starry heavens furnishes sufficient housing—for some chicken raisers. In the fields and pastures one sees the white faced doddies, the supple-jointed young things that all boast pure breeding; swine of the royal blood that verily make friends with the Hebrew.

Get on any of the trains going through the state and you will see the best lot of farm fowls you ever beheld. They are of pure breeding and live in good houses during the little inclement weather they have out there, for Nebraska is a sunshine state. Some one told me once that they had three hundred sunny days a year. I never counted them while I lived there, but could say there is at least a grain of truth in the statement.

Years ago, before the state association was able to gets its appropriation, they had all the "judges of national reputation" out there to score the birds, and even now there are shows in the state, lots of them, that employ judges who cost big money, be-

cause they want the best things judgewise. I recollect the day when the names of Hewes, Felch, Lambert, and suchlike were on the tongues of all the Nebraska fans. When Casper Dice, Dr. Gaiser, Donisthorpe et al. were the wheelers on the bus when the foundation of the present excellence was being laid. Then came along Frank Tipton, lover of White Dottes and beautiful roses; T. L. Norval, fancier of Rocks; L. P. Ludden, M. M. Johnson and Irvin, putting their shoulders to the wheel to keep things up to the standard attained.

Today there are a few of the old-timers still left. They are giving ballast to the fancy in the state. Feldman, Day, Palmer, Sr., E. E. Smith, A. H. Smith, Bowers, Lake, Pegler, Holcomb, Bushell, Hurst, Barks, Ford, Varney, Gaines, White, Campbell, Mrs. Doon, King, Ahlquist, George Lee, Metzger, Binkley, the two brothers Brehm, Henning, Tiffany, Kelley, Mitchell, Rankin, Strandberg, Mrs. Wells, Feuerstein, Wagner, Hensler, Lundstrum, Wolfe, Wortendyke, Barret, Bob White, Ross, Campbell, Burnham and Foster—all these and more that we can recall are making the fancy what it is in the state.

There was a man by the name of Charley Green in the fancy out there once. He was breeding Buff Rocks; but along comes a fellow by the name of Fulmer, with a roll as big as the ones Divinia or Bill Russell carry, and bought him out, making him sign a paper to the effect that he would never breed Buff Rocks as long as he (Green) lived; so Green withers up and becomes sear and yellow from sighs for the love he sold away, as they say in the down-on-the-farm melodramas. But though Green has the blues when it comes to chickens, we have hopes for him. He may be induced to take up the Barreds some spring, as the gentle murmurs of the brook and the listless zephyrs steal through his soul of souls, drying up the fading love and creating a new.

E. A. Pegler once had a chicken love, too. The majesty of the Brahma made him a worshiper. His love for them has ne'er grown cold, though he has ceased to breed them because of the interference of business.

The name Strandberg stands for Rocks. Mrs. Perry Strandberg is the chicken end of the enterprise. She rears about seven hundred birds annually and is always seen among the winners at the state fairs and shows. One can count on her exhibit just the same as he can count on the sun rising tomorrow. Mr. Strandberg, or Perry, as all who know him call him, is the proprietor of some hundreds of acres of that good land that produces heavily of fat cattle, carloads of pork that tops the market, and fruit by the wagon load.

Most of the exhibitors of the Nebraska shows are farmers, and every one of them, it will be admitted by the competition, is the keenest showman in the business. They have the range and the feed and the requisite skill in breeding to make them hard contestants for the prizes. It is something of a hobby with them to grow good stock of all kinds, and especially fowls.

Nebraska fanciers stand for the best there is in chickens and they tolerate no questionable actions on the part of their

fanciers. They hold, and rightly, that the state appropriation they receive and the prominence that the poultry industry has attained in the state demand absolute squareness on the part of all fanciers who are doing a poultry business with the public. It was not many years ago that a couple of crooks crept into their midst, only to be forthwith ousted as bodily as could be. The spirit of fairness and equity exists among the Nebraska fanciers in deed and in truth.

But the Minnesota fanciers are waiting for their grilling, so let us pay our respects to them. Whether they need the grilling or the respects, we will not wait to consider. This state takes the lemons along with the plums that are handed her, so it goes without saying she will accept what we see fit to toss into her lap. And speaking of tossing, did you notice that the legislature of the state tossed ten thousand into the lap of the fanciers and breeders to found a school of poultry keeping in connection with the state agricultural school? When they get this school going they will have something to point to with pride as a great step in advancement of the poultry industry of the state.

Chicken shows and associations are a-plenty in Minnesota. Of course there is a lot of fertile ground to be devoted to poultry in Minnesota yet, but everything points to an industry ten times as large ten years from now. There are settlements constantly being opened up and developed in the part

ping the color from it by night, and when you have finished putting two dollars' worth of feed in him he will be worth forty cents on the scales of Armour & Co.

They will tell you in Minnesota that the whitest bird that grows is raised in its confines. They might admit that a few of the summer resort climates of the Atlantic coast might grow just as good birds, but they never do. No, sir. They say of a Scotchman that it is necessary to agree with him or else kill him, and this might be said of a Minnesotan. They are very jealous of the quality of the birds they grow, and have every right to be, for they are breeding them as good as crow and cackle and lay eggs.

In the southern part of the state are some of the best chicken towns in the land. There is Rochester, for instance, where they hold grand shows every year. Owatonna is a hotbed of henists just the same as Paterson, N. J., is the seat of the red flags. Albert Lea draws out a show of from seven hundred to twelve hundred birds, while Austin comes in to be ranked among the top-liners. Winona must be reckoned with as one of the towns that makes good hens, too. Minneapolis and St. Paul are the heaviest weights in Minnesota hendom, however.

The state show at Minneapolis is a pretty good indication of the status of the fancy. On visiting it you will see uniform cooping and systematic feeding and watering and

SCENE ON THE LAKEWOOD FARMS, LAKEWOOD, N. J.

of the state not thoroughly cultivated as yet, and this means a steady addition to the poultry business of a class of breeders and consumers that are valuable.

No, it is not all shoveling snow in Minnesota.

From the southernmost Minnesota farms to a portion of the state in which St. Cloud may be located, there is plenty of open weather in winter, and climate that makes for hardy fowls from chickhood. There is a common fallacy abroad that Minnesota is a cold state. The weather gets cold everywhere once in a while, the same as it does there; and I can name parts of New England and New York that are colder than Minnesota, yet where more fowls are kept for winter profits than anywhere else.

Talk to a Minnesota fancier half an hour, if you be from the territory not close to him, and he will spring the coolness of the nights; that balmy summer weather; the clearness of her ten thousand lakes; her fertile acres of rolling and prairie land—all these conducive to growth of the finest meated and smoothest plumaged chicken of extreme hardiness and vigor. The color of a bird may largely depend on the shade and the coolness of the nights, so Minnesotans declare. And there is a lot in it. Put a bird out where he will have to grow among the cockleburrs, with the wind and sun and rain beating his plumage by day and the heat sap-

cleaning that will make you wish you were an exhibitor. They do things right at this state show. About three thousand birds are cooped and penned and puddled, for the waterfowl have real water and a realish looking sort of setting for the miniature lake they disport themselves in. The attendance is about all that could be desired, and as a selling show, those who constantly exhibit tell me that it is a leader.

The pillars that the fancy rests on in Minnesota are sound as adamant. There are Leslie Parlin, Ralph Whitney, Hess, Cole, Bodie, Raddue, Benjamin, Cook, Johnson, Fiegel, Austinson, Symes, King, Benson, Kruse, Hill, Ellison, Hall, Holden, Hintermister, Tubbs, Caneday, Swaggert, Nelson and Neitz. Some hundreds of others also make a good list of blocks in the foundation. Space forbids giving names of them all—and, then, our memory is short.

Minnesotans have been very busy in the cause of more and better poultry as exemplified in the worth of the northwest branch of the A. P. A. It has been largely through the influence of the members of this branch that the nice appropriation for the poultry plant at the state agricultural school has been secured. At the farmers' institutes during the winter and spring months, there are lecturers who devote a major portion of their time to poultry topics.

PRIZE ARTICLE DEPARTMENT

We would like to have all of our readers compete for the prizes offered each month in this department. Send as many articles each month as you desire. For the best article we will pay \$3.00 and for the second best \$2.00. Make your communications about a column in length, which is about 600 words. They should be timely and appropriate to the season. Articles describing appliances and houses and accompanied by rough drawings are especially desirable. All the communications must be accompanied by a letter stating that they have been sent in for competition in the Prize Article Department. All articles must be written on one side of the paper only. Articles received after the 15th of the month will be too late for competition in the month following, but will be entered the next month. No manuscript will be returned, but all who send meritorious articles will be given a year's subscription to AMERICAN POULTRY JOURNAL, whether the article is published or not.

The first prize in the contest this month has been awarded to Stephen Innes, Los Angeles, Cal., and the second prize to A. F. Almendinger, Buffalo, N. Y.

TWO VARIETIES.

HERE are different kinds of poultrymen in the world. There are poultrymen, and then again there are poultrymen.

I have lately come across a shining illustration of this trite fact, and, as the lesson was worth a great deal to me, I want to do what I can to pass it on.

Two men came from the city some time during the past year and a half, and each one bought a well-equipped little poultry ranch near my own farm on the outskirts of Los Angeles, California.

The two ranches, as it happened, were very much alike in every respect, and the two men had had some little experience in poultry in their back yards in the city.

They both came to the country believing that it was possible to build up a live, growing, poultry business, and hoping that little by little they could depend on it entirely, and so get away from their business in the city, which they wished to do.

So far the men were alike.

But the poultry business is a pretty big thing, and both of the men, when they took it up on a large scale in the country, began to find difficulties which they had not experienced in their back yards in the city. And at first neither of them was successful in the new venture.

It is just here that the difference in the men, the divergence in their character and methods, began to appear.

From now on we shall have to call one of them Mr. Pessimist, and the other, Mr. Optimist.

Mr. Pessimist became very much disgruntled and went moping around his ranch, enlarging the difficulties in his own mind, and discouraging everybody else. "I'm sorry I ever made the trial," he repeatedly exclaimed. "The difficulties are too great to overcome. I don't know whether to go on or not."

He had bought the place, however, and there was so much involved that he finally decided not to throw it over. But his efforts were so enshrouded in gloom, and so half-hearted, that at last he gave up in despair and went back to the city—a beaten man.

That was one kind of poultryman.

Mr. Optimist, on the other hand, although at first finding the same difficulties that crushed his neighbor, seemed almost to get pleasure out of his failures. He rubbed his hands and smiled. "It's experience," he said; "and experience is itself worth a whole lot of money." Then he

got down to work, and tackled everything vigorously, determined to win.

His experienced neighbors, too, seeing his spirit, were constantly calling on him and dropping valuable hints to help him along in his determination. It is always a pleasure and an uplift to come in contact with a cheerful, hopeful man.

Pretty soon his difficulties began to vanish and a few months ago Mr. Optimist was compelled to buy more land for his growing business. Recently he has given up his clerkship in the city, and now has a valuable and immensely promising poultry business of his own, and has made, and is making, a great and noteworthy success.

He is a living illustration of the other kind of poultryman.

A few days ago I asked Mr. Optimist for some of the secrets of his success, some of the things that would be helpful to other prospective poultrymen who might be contemplating such a step as he himself has so successfully taken. His valuable reply I shall have to embody in some future article, as this one has already reached the word limit.

I only want to say here that in giving the reasons for his success he made no mention of optimism. Stephen Innes.

Los Angeles, Cal.

A SURE AND QUICK CURE FOR FEATHER AND EGG EATING.

AT THE Buffalo Show, 1907, I stood in front of the coop that contained my first prize pullet. I saw that she was about to lay and I waited so as to remove the egg. She dropped the egg and before I could open the door she had turned round and eaten more than half of it. I have had egg eaters before and have made false bottom nests with a slit in the upper bottom for the egg to fall through into the space below. With me they have never worked well, as I found the hens did not like that kind of a nest, and they would lay in the litter on the floor instead. So I put on my thinking cap to find some way of breaking up this pullet. What was it my wife put on the thumbs of our baby to stop her from sucking them? Ah! I had it! Bitter aloes. I got some and asked my wife to save all the egg shells from the eggs used for cooking and for the table, and to break the eggs as near the middle as possible so that they would be in halves. I mixed up a thick paste of flour and water, also stirring in an egg, and then stirred in a good liberal dose of bitter aloes. I lined the inside of the egg shells with this paste and stuck two of the halves together, making it look like a perfect egg. I prepared a lot of them and then rolled one in to the pullet. In about two minutes it was gone. I gave her another one, which disappeared in like manner. I think she took five or six of them before she was satisfied, and then left one in her coop, but she had had enough to last her a lifetime, and did not want any more. I left the egg in her coop about a week, but she never went back to the bad habit again. I want to say right here that there are a number of people who claim that the feed a hen eats does not affect the flavor of her eggs. Let these same people feed one of their hens with these bitter aloes paste eggs and then try and eat the eggs she lays for the next three or four days. It will not be a theory but facts that will confront them. Last spring I had a pen of six pullets from which I was getting only one and

sometimes two eggs a day, although they appeared to be in just the pink of condition for laying. I could never catch one of them eating their eggs, but to make sure I put an egg on the floor of their pen and found four of them were egg eaters. I prepared about twenty of these doctored eggs and fed them to them, one at a time. It took them just about thirty minutes to get all that they wanted. I then gave them a fresh egg (not broken), but they had no use for it. The next day I got six eggs from that pen and had no further trouble with them, getting five and six eggs a day from them. If any of your readers are not getting the number of eggs from their hens which they would naturally expect, let them test their hens, once in a while, by giving them an egg and then watch them to see what they do with it. If there are any egg eaters they will know it in about two seconds.

In the spring of 1908 I had a pen of cockerels that got to pulling and eating feathers. I took some vaseline and mixed a liberal quantity of bitter aloes with it and smeared the mixture on the feathers, around the spots where they had been pulling, including the bare spots. I put the cockerels back in the pen and watched them. They made three or four attempts to pull feathers, but the feathers did not look good to them and they would not succeed in getting them out. I had no further trouble with them. One application was enough in this case. I also found the mixture good to apply to cocks which had been fighting and had their combs and wattles torn. I would wash the blood off and then apply the mixture to the sore places. I would then put them back in their pens with the hens and found the hens would not pick at him as they would otherwise do. I am breeding Leghorns and if these active busybodies can be cured of these bad habits in about thirty minutes I think there is no question about the other breeds being cured.

Buffalo, N. Y.

THE VALUE OF PROPER FEEDING

Difference Between Feeding and Forcing—Method of Obtaining Growth—Soft Food in Abundance is Detrimental—Feeding for Growth of the Bone Structure—Feeding to Induce Early Maturity

Written for American Poultry Journal by Rev. C. E. Petersen, Bridgton, Maine

IT WOULD seem that if there are any points in the proper handling of poultry that need continuous elucidation it is the subject on which we are now dealing, for with all there has been written on the subject there are more annual losses from improper diet than from any other source, including all the new ailments said to be caused by faulty and continuous artificial incubation, which last statement is by no means conclusive, in spite of what some isolated experiments may say to the contrary. We are firmly convinced in our own mind that improper diet has more to do with the large mortality of incubator chickens than any other factor, for the feeding and care is delegated to the poultryman in the place of the hen, and perhaps his faulty methods are more to be blamed than faulty incubation, which is only at the most one factor to be dealt with in the successful rearing of chickens.

We have lived through the most progressive years of modern poultry culture, as from boyhood we have been interested in the study of it, and we have noticed the evolution of poultry feeding and all other details connected with it, and from some of the earliest files of American Poultry Journal could gather information about so-called new methods of today that after all is not new, but have been tried, set aside as not wholly satisfactory, picked up again and heralded far and near as some wonderful discovery when it is really the same old method in a slightly different garb.

We have raised our chickens as well on one kind of food as another, and have had no more mortality from moist food than we have had from dry food, and we have fed ever so often during the day and have had it before them all the time, and in each case there has been partly success and partly failure, and it has only been when we so combined both methods that the best features of all were utilized that we got the best success and the minimum of mortality among our chicks and our own experience is backed up by every poultryman who is enough interested in his own welfare and the chickens to go by experience rather than by fads, which

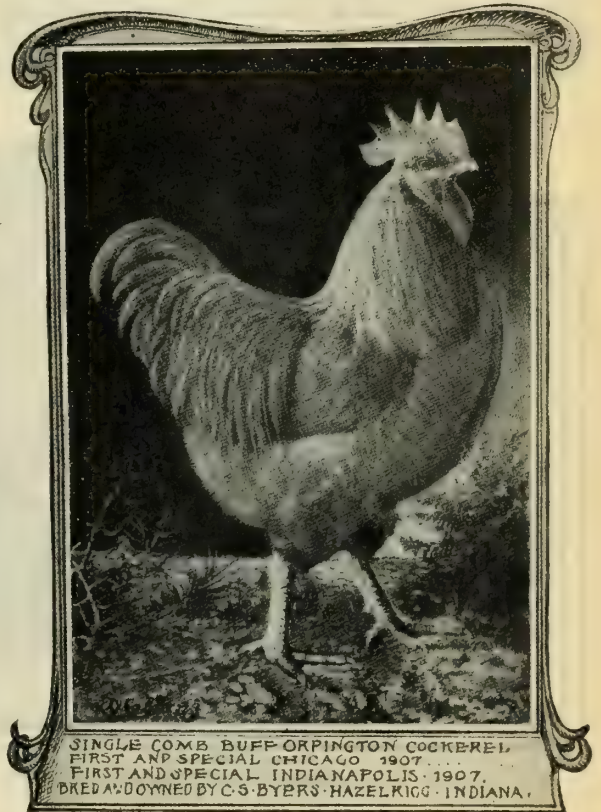

seems now-a-days to be the rule rather than the exception in most everything pertaining to poultry culture.

There seems to be a misunderstanding among beginners, and I am sorry to say even among those who ought to know better how to differentiate between feeding and forcing, and until a right comprehension of the two systems are obtained there always will be more or less loss among the breeders of fancy poultry.

Forcing for growth needs expert handling by competent poultrymen who are in the business to get the maximum growth on broilers and roasters in the shortest possible time, as it is said to make a finer grade of flesh and, of course, reduce expenses to the minimum in making them ready for the market.

Feeding fancy poultry is also a method of obtaining growth, but not in the shortest possible time, but by judicious blending of the foodstuffs used obtain stamina, a large frame and a system which is normal in all its inner functional organs.

In the last case soft food should be fed sparingly, or the consequences will inevitably result in an enlarged liver which is the beginning of other functional troubles which in the

end proves disastrous to the birds if they manage to live until mature.

We don't believe in using soft food in abundance to stock that is to be used for breeding purposes; we do not want them fat and plump, but large in frame and rangy, robust birds that can run and roam and are entirely free from the wobbly gyrations of the overfed dyspeptic chick that all over carries the same appearance as does an illy-nourished child.

Any chick will eat till surfeited if they get the chance and work around all day with extended crops till finally appetite is lost and then comes the drooping state and the inactive season that in most cases winds up with the loss of the chicken.

I believe in continuous change of diet, and never feed to repletion till the evening meal, when I want them to have their crop full, but during the day little and often has given me the very best results during my experience with fancy poultry.

All the other methods advocated have never proven successful with me, and I have given them a fair trial, and though some of them may put money in the coffers of the grain merchant they will certainly result in loss to the poultryman, not always, however, in the first season, as the bad work is generally hidden and working against a strong, robust constitution, but if continued in it will finally undermine even the best constitution and then the trouble begins

with the chicks which are produced by parent stock whose functional organs have been disordered by improper feeding methods, which in the beginning seemed all right, but in the end proved anything but right.

It is usual to speak of, and to treat, the common fowl as graminivorous, and the general belief that it is so has led to more than half the losses and disappointments of those who have tried to keep them in situations where the birds had not an opportunity to correct, by their own foraging, the mistakes of their owners. There are few animals that could be described so correctly as essentially omnivorous.

The fowl is not only omnivorous, but, unlike many other omnivorous creatures, it cannot keep in anything approaching good health on any one kind of food. The pig will flourish on any kind of grain alone, on peaches and grass and even almost entirely on meat. The fowl will not keep in health either on grain, or grass, or on meat alone, but must have all three, and some minerals as well. When very much pressed with hunger or kept short of gravel, it will swallow stones as large as a bean, not only without injury, but with the best effect upon its health and appearance, whatever else the fadist has to say just now on the question of gravel not being necessary whatever, but only a bad habit contracted by the birds, but when kept on any one description of food it droops, looks unhealthy and is certain to prove unprofitable.

One noted writer says: "For the past fifty years it has

could never pass through the alimentary canal, and could therefore never give up their nourishment to the dog's blood.

"When sufficient sawdust was mixed with these clammy substances, all his chemical theories proved as empty and fallacious, though by no means as mischievous, as John Brown's bleeding and brandy cures, and the dogs lived and thrived with or without azote.

"By those who will really look into nature, and read there for themselves, instead of riding away on learned hobbies, facts will be seen every day to show that human beings and animals can be, and often are, starved to death like Magendie's dogs, by the excessively nutritious character of their food."

Other experiments of the same kind and of modern date go to show that we are entirely correct in the position we have always taken that the inordinate supply of concentrated foodstuff will do much more harm than good and that bulk must be given in an abundant manner to obtain the very best success.

It has frequently been stated that the birds will balance their own rations, but I never put much confidence in this statement, for observation has taught me to the contrary

MEMBERS OF AMERICAN POULTRY ASSOCIATION IN ATTENDANCE AT THE

been very fashionable to parade chemical discoveries as to the constituents of food, as they were the ultimate authority that rendered all records of experience unnecessary, and to treat as a matter little worthy of notice the demands of each animal machine to have that nourishment presented to it in such combination as shall be consistent with the design for which that machine was constructed. We all understand that 5 per cent too much oxygen in the air we breathe would be just as fatal to us as 5 per cent too little, while the conducting nitrogen is well understood to be as essential to life as the vitalizing oxygen, but, even our ablest physiologists have shown reluctance to recognize the equal importance of a conducting medium in combination with the nourishing elements of our food."

"When Magendie found that dogs would die in about a month fed exclusively on water and sugar, or oil, or gum, or butter, or white bread, he at once harassed his brain to find out some chemical cause for their death, and, taking it for granted that it must be in consequence of deficiency of nourishing property, he came at length to learned conclusion that dogs died because all these substances were deficient in azote. With all his accurate knowledge of the construction of the alimentary canal of these dogs, it seems never to have dawned on his chemical brain that a physical barrier stood in the way of the dogs' getting any nourishment from such food, whatever it might contain. He seems never to have thought of the sufficiently obvious fact that such substances

there are some kinds of grain that they prefer and will in every instance where free access can be had to it, fill themselves with it and leave all the other grain untouched except when the more palatable supply is gone, they will then eat the rest because there is nothing else to get.

Feeding for growth of the bone structures, feeding for quick development up to the broiler stage, feeding for eggs, feeding for strong fertility of eggs, and feeding for strongly hatchable eggs in connection with the last, all takes different feeding methods and what will do for one will not do for another.

In the breeding of fancy fowls which are invariably bred to feather for exhibition purposes, forcing must not be employed, and such feeding materials should be given as will prolong the time before the first egg is laid.

We cannot induce early maturity, and expect a full development of the more desirable features in an exhibition fowl, for it will take fully six months and seven to eight in some of the larger breeds before the growing period is completed, and this period will invariably come to a close if the feeding has been conducted on a base of getting eggs as quickly as possible.

In the case of growing fowls up to a strong, robust condition of health and activity and large-framed birds representative of their breed exercise, plenty rough feed such as cabbage, cut clover, roots of any kinds and dry, hard grain is all that is necessary, providing the chickens were hatched

in time, and some of the grain should be so placed that it will furnish exercise for the birds, such treatment will not only produce strongly fertile eggs, but eggs that are hatchable and that will produce strong livable chickens.

Where range can be given to the birds to such an extent that they can furnish themselves with the green food the above is, of course, not necessary, but where this cannot be given it must be supplied to them.

Tough, hard grass late in the season does not suffice, and for that reason it is well to cut it frequently, which will start up a new supply of more palatable food in this line.

DOES IT PAY TO BUY EGGS FOR HATCHING?

Dr. H. F. Ballard.

Being two sides to nearly every question, I would like to give a little experience on the above topic, but not with the idea of settling it.

I have bought this season 415 eggs for hatching from seven different breeders of Cochins and Polish, and paying from \$2 to \$5 per setting for them—no cheap stuff by the hundred. Out of this number nearly one-half were tested and

Out of the 415 eggs, and with fifty-five more yet to hear from, I have just fifty-two chicks left. To get first cost out of the eggs, I have got to get over \$2 each for the chicks. I only have one more hope to fall back on, and that is that the quality will make up for the quantity.

Most of the infertile eggs in the above experiment were Polish. I cannot understand it, because when I bred Polish a few years ago they were more fertile than the Cochins. My Cochins this year at home tested out from none to three infertile eggs to the setting. I do not believe that shipping an egg makes it infertile. Eggs that I shipped were not in a single case reported tested at all. They all waited until the eggs hatched and then reported the number of live chicks they had left. There is nothing fair in that to the seller; he can guarantee nothing but the fertility of the eggs; then if they fail to hatch it is the fault of the hen. Whenever a customer reports to me that he has only three chicks, the balance of the eggs being rotten, he has no recourse on me. Nurr leiche on a rotten egg! It is not just to the egg, and the result is—disagreeable, anyhow.

In my opinion whenever a breeder has a pen of fowls that are only fertilizing one-third of their eggs, something should be done; an investigation will generally result in the discovery that all the infertile eggs are laid by certain hens, and when such is the case these hens should be removed and tried with another male bird; if the eggs continue infertile,

THIRTY-FOURTH ANNUAL MEETING, NIAGARA FALLS, N. Y., AUGUST 10-12, 1909.

infertile on the eighth day of incubation. I never wait until the eggs hatch to make my report to the seller. Two settings out of the number tested ten eggs per setting as infertile. Out of the balance about one-third rotted. These, of course, were fertile, or they would not have rotted. About one-fourth of the balance failed to get out of the shell. All those that were helped out died, so that doesn't pay. Only a very few were mashed in the nest. Some hens will take care of fifteen or sixteen chicks in a nest and never crush one; others will mash half or more. I aim to give the chicks to the hens with the most sense. I do not use an incubator.

About twenty-five chicks were killed by two hens after they were placed out in the yard, pecking them to death; not their own, but other hens' chicks that would wander over to them. These were White Wyandotte hens that I bought of a neighbor to set. I would not have another Wyandotte hen on the place; they are the meanest, most spiteful things I ever saw. Some people think that a hen that fights everything that comes near is a good mother, but I don't see it that way; the best hens to raise chicks on earth and the ones that will take all you give them and come nearer raising every one are the Cochins. I bought ten hens to set—Plymouth Rocks, Wyandottes and mongrels—because my Cochin hens persisted in laying all spring and I could not get hens enough to set. This shows that the idea that the Cochin is a persistent setter and good for nothing else is a mistake.

I should eat that hen, eggs and all; she is a disgrace to the pen and a criminal in the sight of the man who buys her eggs.

What are the causes of so many infertile eggs? First, the male bird; but if a part of the eggs hatch it is not all his fault. He may have too many hens with him in the pen. When fowls are shut up in small pens with little or no range, four to six hens are enough; the feed must be plenty, but not bulky, not concentrated, and must have all the elements necessary to make eggs, in vegetable, animal and mineral, or grit. Then he must be vigorous and strong; if he is not, he will get few chicks and they will be weak. The hens must be active and good scratchers; a hen that stands around and will not scratch nor dust herself is no good as a breeder; such a hen is either lousy, too fat, fed too much, or sick.

We like to cull out our poorest hens in quality and save all the fine ones, but sometimes the fine ones are only fit to show and will not breed, while the poorest in quality will lay like flies in summer; in fact, I don't know but that it is the rule for the 85-point hen to lay twice as many eggs as the 95 one. They seem to take a delight in proving their superiority in laying to the aristocratic show bird who only sits around and plumes her feathers.

But, then, most breeders are not charging more than half what fertile eggs from thoroughbred stock are worth, so I suppose we can expect infertile eggs to make up for what they lack in price.

per each month.

AMERICAN POULTRY JOURNAL is the oldest
poultry paper in America. It has a national
and world-wide circulation. The best writers
on poultry matters contribute to its columns. It
receives the patronage and endorsement of the
foremost representative breeders of standard
poultry and manufacturers of poultry appliances
in the country.

Advertising rates are sent upon request.

60,000 A. P. J.'s for September, 1909.

State of Illinois, County of Cook, ss.

J. G. Budde, secretary and treasurer of Regan
Printing House, Chicago, being duly sworn, cer-
tifies that the American Poultry Journal has
contracted for printing and binding sixty thou-
sand copies of the September, 1909, issue.

J. G. BUDDE,

OUR GUARANTEE.

We guarantee our subscribers against loss
due to fraudulent misrepresentation in any
display advertisement appearing in the
American Poultry Journal, providing the
subscriber when ordering the fowls or mer-
chandise states that the advertisement was
seen in the American Poultry Journal, and
places the order during the month or months
in which the ad is inserted in our columns
and notifies us of the fraudulent misrepresen-
tation of the advertiser, giving full par-
ticulars, as soon as it occurs.

The A. P. A. Convention

The meeting of the A. P. A. just
closed brought out plainly and strongly
several facts that to our mind insures
greater progress in the standard bred
poultry world.

The one feature most noticeable was
the perfect harmony of all interests for
the general success. In debate the pros
and cons were eloquently stated, and
the pleas made in many cases were of
a character to give color to their mean-
ing. In every case with the vote taken,
the scars of battle were erased, and the
contestants were stronger friends than
before. This is as it should be, and
to our mind one of the most promising

signs of the real value of proper organ-
ization. It plainly shows the trust of
members, and the respect for opinions
which can't be questioned.

This convention clearly showed that
the breeders were not ready to eliminate
color disqualifications; what the future
has in store in this regard is a long
case of chance at best. That this judg-
ment is sound, and as the breeders see it,
in the interests of better poultry, can't
now be questioned. The changes pro-
posed were rather radical and sweeping,
as we have before remarked. Time will
arrange all this properly and satisfac-
torily.

Time will also have other matters to
adjust, if some of the mention we heard
freely made during the convention is car-
ried up. The question of delegates is
one of these. At this convention one
member had forty-four votes to cast as
a delegate, another had twenty-three, and
another had seventeen, while others had
from five to seven each. It is also a
question with us if this is just right;
it looks very much like a combine, or the
makings of one. These delegates, as we
understand, are NOT instructed how to
vote on the different questions, and by
the number of votes they control it must
be evident that two or three of these
could combine and control the entire
meeting.

The poultrymen that have the interests
of the association at heart will attend
if that be possible, and vote as they
think best. While those that do not at-
tend should at least have the privilege of
knowing who will vote for them, and
the opportunity of expressing themselves
if they so desire, on any and all ques-
tions.

This question, when properly under-
stood, is very apt to diminish interest
in our meetings. The member can well
ask, "Why" should I go? My one vote
is a very small matter to go for when
others there will have from twenty to
forty votes each. This is a question, or
rather condition, that should not exist.
We must keep aloof from all possible
combines and chances for same. Every
member has a vote; he should by all
means try to attend, and all should stand
on an equal, with equal rights and power.

We shall most probably refer to this
question again, for it is one that sooner
or later will have to be dealt with. In
the meantime we would like to hear from
other members. The A. P. J. will donate
the space to thrash out this question of
Equal Rights. H. P. Schwab.

Quisenberry Re-elected—Hobbs Ap-
pointed

We have already recorded in these col-
umns how the state of Missouri went
to the front by passing a law that made
it possible for the governor to appoint a
state poultry board on the same wise plan
as the state board of horticulture and
dairying. The appropriation for the
board and its secretary is ten thousand
biennially. The secretary is to devote
his entire time to the work of caring
for the annual state show and in insti-
tute work, issuing bulletins and helping
the breeders and fanciers and farmers
of the state in their poultry work.

Tom, as everyone knows him, and
T. E. Quisenberry, to those who do not,
was secretary of the last two or three
state shows and held the first office of
secretary under the new poultry board
which was created a couple of years
ago. He went down to Jefferson City

the past winter and did his best to
convince the lawmakers that there was
need for more than a two thousand dol-
lar appropriation, and stayed there till
the new law was passed, and signed.
Tom did as much or more work than
any man who helped push the bill, as it
needed pushing before the house. After
the law was passed and signed he had
every breeder in the state behind him in
the effort to make him secretary of the
more powerful board, and we hear that
he has been successful in securing the
new secretaryship, which is just right
and shows that Missouri poultrymen
know a worker when they see one and
appreciate the past efforts of this man,
who has done more than he had ever
been recompensed for.

We may expect to hear some good
reports of poultry work in that state
hereafter. Quisenberry is the man who
will get them out and get them up in a
way to demand attention. He knows
chickens from A to Z. The state show
of Missouri, which has the reputation
of being the best state show in the
country, will move ahead further now
that it has increased facilities. Just
where the 1909 event will be held has
not as yet been decided by the board,
but we shall know more about it soon.

Missouri poultrymen will not be dis-
appointed in their man Quisenberry,
and we may hear of still higher honors
and greater responsibilities heaped upon
him. Getting the new work under way
will be task enough for a time.

Governor Hadley has appointed Vic-
tor O. Hobbs, of Trenton, to the poultry
board, which appointment meets gen-
eral approval in all quarters.

Needed—Knowledge on Feeding

One of the unique things that we find
in the journals for August is the re-
port of the laying tests conducted by
the president of the National Poultry
Association as they are given in the
Poultry Monthly. This contemporary
tells us that Mr. Townsend assumed
that every hen requires a certain
amount of food to make her egg, and
that all hens require the same amount
and that if they consume more than
this they are putting that food to flesh
or wasting it. Each pen of fowls; in
the short time test, received the same
amount of food. No matter what the
results may have been, we cannot pass
over this idea without some comment
on it.

Let us take the two extremes of egg
layers as examples, the Light Brahmas
and White Leghorns. Ten years ago
we kept these two breeds side by side
and fed them from the same pail, and
wanting to know how they were lay-
ing we also used two calendars, oppo-
site the dates on which we set the
number of eggs collected from the two
pens. The Leghorns were very light
eaters. Every breeder who has kept
them side by side with heavier breeds
will say the same thing. The Brahmas
ate about as much or more than any
breed we ever knew much about, and
we have kept Partridge Cochins too.
The amount of grain fed whole was
measured to each pen. It was fed from
a pint measure and the amount of
Brahma food in excess of the Leghorns'
feed was about the same as the differ-
ence in the amount of mash feed that
each pen of five females received.

The Leghorns were slightly in the
lead as layers and laid nearly two eggs

for the amount of feed that was fed to the Brahmas to produce one. The Brahmas had a greater amount of flesh to carry and to afford new tissues for and their extra food consumption would be but natural. They laid larger eggs than the Leghorns and it is not more than fair to assume that the amount of elements in their eggs required more material to make, owing to the fact that they were larger. What we need to hear more of from the experiment stations is the amount of food it requires to make eggs from the various breeds. The relative qualities of the breeds is pretty well understood when it comes to their egg laying abilities.

Breeders of dairy cows have discovered these long years since that larger cows required more feed to make the same amount of butter fat than smaller ones. They know and have proven that a given amount of weight in an animal requires a certain amount of food of a certain nature to sustain it, whether the animal is making milk or not. There is no branch of poultry management that so soon shows the beginner his lack of knowledge in caring for his birds as the proper feeding of them.

A Similarity of Breeds

The fanciers of Great Britain have in their Light Sussex fowl a bird that greatly resembles the Columbian Plymouth Rock of this country. In the issue of July 14 the London Feathered Life had a very striking illustration of a Light Sussex hen which at first sight gave one the impression of the well bred Columbian Rock. The outline and color of the two different breeds of females are wonderfully similar, and the only shade of difference that we could see was the slightly larger comb of the Sussex than that of the Rock. Note that the color term used to designate the Light Sussex was taken from the Brahma, and rightfully. Here is what a very conservative admirer of the Light Sussex has to say of them:

"Every fancier has his particular fancy, I suppose. Although he may breed some few different varieties, there is generally one which is singled out as the specialty, and in my own case the favor goes to the Light Sussex.

"I will first give my reasons for being particularly fond of the 'Light Sussex.' After testing their egg-producing powers and other points for some years, against many well known strains and good breeds, I find their utility qualities to be far above the average. As winter layers they are excellent, not being so susceptible to changeable weather as some other breeds. They lay a good-sized egg, being, on an average, 27½ ounces per dozen. The egg, although not brown, is of a good tint, but inclined to be somewhat uneven in color. However, it is a good, salable egg.

"If moulted out early in the season the birds will lay through the depth of winter, and I often say a farmer might have eggs every day of the year by keeping two varieties of fowls only—viz., Light Sussex for autumn and winter laying, and White Leghorn for spring and summer work.

"This variety has been bred in the north of England, and, although far away from its native country, it has quickly become acclimated, and proved

itself to be a good egg producer, and the chickens have been found easy to rear.

"The Light Sussex is called by some who have not known it many years a 'new breed,' but this is quite a mistaken idea, for it can be traced back a great number of years as being bred in Kent and Sussex for its useful properties as egg producer and table fowl. It is mentioned by the late Mr. Harrison Weir and also by the late Mr. Lewis Wright."

Oil-Soaked Poultry Houses

An enterprising English maker of portable poultry houses says that at last he has discovered a plan whereby he may be able to make a wood house that will last a lifetime at very reasonable figures, in fact at no excess cost over what he has already been selling them. The lumber from which these houses are made is dried thoroughly in the kilns and then backed on a small car into a huge tank, from which tank the air is pumped completely, making a perfect vacuum. The vacuum is then replaced with an oil spray that goes into every small hole in the wood. Each house of the average size takes up about ten gallons of oil right in the wood. Then when the building is painted it is absolutely impervious to the weather. There is no doubt but that the scheme is a good one, and if it is as well done as the description of the job, then the house would be just what the breeder is looking for. Constant painting of wooden buildings will have to be done from period to period as it is needed, but this manufacturer says that painting will be but half as frequent in preparing the houses he is now building to be weatherproof. This of itself would make a great difference in the cost of repairs and upkeep where there are a large number of colony houses used. In time we will hear of more prepared lumber for building in this country, though at the present time we have preparations that are designed for keeping out dampness and making paint serve its purpose more perfectly.

More Light Needed

W. J. Spillman, of the Department of Agriculture, says in an article in the last issue of Poultry that barred females do not transmit their barring to their offspring. He does not tell us why this is, but leaves us under the impression that it is nevertheless true, and that there is an explanation for it, but space did not permit of its lengthy details. Let us quote a paragraph or two:

"Now for the reason why female Barred Rocks are darker than males of the same breeding. Female Barred Rocks cannot transmit barring to their female offspring. They do transmit barring to their male offspring. We know why this is true, but it would take too much space to explain it here. I must, therefore, ask my readers to accept this statement on faith.

"On the other hand, Barred males, if pure bred, transmit barring to all their offspring. A barred male therefore inherits barring from both parents, while Barred females inherit it only from their sires. The males, therefore, have twice as much tendency to barring as do the females. The males are there-

fore more barred than females and hence are lighter in color."

What Professor Spillman owes to the fancy is an explanation of the reasons he withholds. We know a breeder who last year bred from a very peculiarly barred hen of certain anatomical characteristics. This hen was very finely barred in the sense that there were about 50 per cent more bars to the feather than any of her sisters or half-sisters possessed. None of her relatives were formed like her. She was mated to a cockerel of the medium type of barring. There were two differently bred sisters (not related to the first female) also mated to him. From the first female all the chicks closely resembled their dam even in the peculiar character of formation and also in the barring. A stranger to the flock could pick out this hen's female chicks, now in their adult shape and plumage resembling the dam. Not one of them had a characteristic that could be laid to the impress of their sire. A stranger to the flock remarked that the hen and two of her chicks were sisters.

The two females that were also mated to the cockerel did not impress their likeness on any of their chicks, as they all resembled in more or less exaggerated form the faults of the sire, bad eyes, legs and other characteristics which it was thought the male would not be able to transmit inasmuch as the females were strongly bred. These are breeding facts. The sire of the females and females themselves are alive and substantiate the fact, but unfortunately their dam is dead.

English Breeders Importing

The Australian fanciers have been great buyers of stock from away from home and the "Tight Little Isle" has received the lion's share of her patronage, but we note that since the laying tests in that island of the southern seas the English breeders who are working for greater laying qualities in their flocks have gone so far as to import some Australian birds and add these to their breeding pens.

In connection it will not be out of place to mention that some of the enterprising English fanciers have been importing some Silver Wyandottes from this side of the pond, and we are ready to congratulate the American fanciers who made the good impression that English journals are now recording. As yet we have seen no discussions about the comparative merits of the two strains of Silvers, but sooner or later we expect it. The American bird, a photo of which is reproduced in the leading English journals, is very cleverly marked from beak to toe and tail in her manner of lacing. Her hackle is quite good and her shape excellent. The width of her lacing is not appreciably narrower than that of the best specimens at our leading shows, but altogether she is a very good example of what we are producing along Silver lines.

Minnesota's Appropriation

The poultry department of the state of Minnesota has recently been given ten thousand dollars for the establishment of a poultry plant that would be more of a credit to the institution, thus giving better practical instruction than has heretofore been afforded the classes

WHAT'S the matter? Why, there's a poor lubricant on the axles, and the wagon drags, the horse pulls hard, and the driver is annoyed.

MICA Axle Grease

will end such conditions. It's all the difference between easy riding and hard going. It's like ball bearings in the wheels, or a push behind, or a double team on a one-horse rig.

It's the lubricant that ends axle troubles and it's *best* for all wagons, light or heavy.

Ask your dealer for Mica Axle Grease and prove it.

Pays for one year's subscription to American Poultry Journal and a copy of "How to Build Poultry Houses"—A 64-page book on poultry house construction.

in poultry culture. This appropriation is for the first two years of the building of the plant. There is some little friction between the members of the faculty and the men who worked for the appropriation and at the present time there has been nothing definitely arrived at in the settlement of the manner in which the money is to be used. It is thought important by the majority of the men behind the building up of the poultry plant at the state experiment station to see that the initial appropriation is used wisely and well and that there be something to show the next legislature for the money.

Our Oldest Advertiser Discontinues

In the first issue of American Poultry Journal, in 1874, appeared the advertisement of P. Newcomb, Cedar Rapids, Iowa, and Mr. Newcomb has never missed having an ad in our columns since that time until this issue. On August 3 we received the following letter from him:

Cedar Rapids, Iowa, August 2, 1909.
Editor American Poultry Journal.

Enclosed find payment for my ad for July and August. After August you will please discontinue my ad, as I expect to go to the Coast and be gone an indefinite period. On my return if I have any birds left I shall again give you an ad, as I have been selling off my birds recently and have not many left. We will not be home to answer letters or ship any stock in case of sales. Wishing the American Poultry Journal abundant success, and which I consider the best medium in the United States for poultry advertisers for constant results which I have had since the first number was issued by Brother Ward in Cedar Rapids, Iowa, I remain yours truly,
P. Newcomb.

Charles Nixon, Washington, N. J., the well-known eastern breeder of White Wyandottes, was granted a judge's license for the American classes at the late meeting of the American Poultry Association. Mr. Nixon has been breeding fancy fowls for the past sixteen years and we know of no one who is better qualified to judge fowls than he is. We have known Mr. Nixon personally for several years and cannot speak too highly of him, both as a breeder and a gentleman.

Mr. John Gormly, 1711 North Twenty-ninth street, Philadelphia, Pa., recently purchased an 83-acre farm and desires to stock same with Quail, Pheasants, Indian Runner Ducks, Guineaes, etc. Any of our patrons who can supply his wants should communicate with him at once.

The poultrymen are still offering special sale prices on the birds they have to offer. And ere it is too late we again caution our readers to look to their wants and order before it is too late. These opportunities come but once a year, and at this time choice breeding and exhibition birds can be had for less than half price and value.

Did you read that "Important" notice on page 734 in the last issue? That is "Fair Play" for all Our Folks. All interests can be best served by the simple mention when writing advertisers, that their ad was seen in the A. P. J.

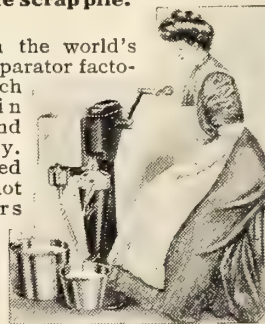

Knocks Out 7

Dairy Tubular Cream Separators are entirely different from all others—are simple, sanitary, satisfactory.

Mr. St. John Backus, of Sloan, Iowa, writes:—"I bought a Tubular 'A' No. 6. Before buying this separator, I tried seven makes. None was satisfactory, so decided to try your Tubular. I found it more than satisfactory and could I not have returned the other makes, as I did, I would have consigned them to the scrap pile."

Made in the world's greatest separator factory. Branch factories in Canada and Germany. Sales exceed most, if not all, others combined.

CHICK CHATS

by H. P. Schwab

By H. P. Schwab, Irondequoit, N. Y.

How did you like our efforts last month? We wish to make this department newsy and up to date, and ask our friends to send us items of interest to the poultry world.

* * *

Intentions, like eggs, soon spoil unless hatched.

* * *

We have real good news to chronicle in the improved condition of Mr. F. L. Sewell. Here is hoping for his complete and speedy recovery.

* * *

Join the Specialty Clubs. We believe the general interests demand this. The A. P. J. will publish the complete list of clubs as often as seems necessary, also such notes of interest as are sent in.

* * *

Before another year rolls around the A. P. J. will have, it is hoped, 100,000 subscribers. This will mean half a million readers each month. A high aim, it is true, still we have that much confidence in "Our Folks" to believe this can and will be attained.

* * *

Tell your friends and neighbors of the good old A. P. J. Their interests in poultry are enough to get them to subscribe, and they will consider this a favor. The general success is the important factor in all business, and in this in particular.

* * *

No industry is represented by a press equal to that of poultry. To educate those who have the opportunity to breed poultry along standard lines, and thereby to improve their condition as well as their incomes, is the work simply told that the poultry papers have been doing for years. In the case of the A. P. J. for over forty years.

* * *

*Let's not burden our remembrance
With a heaviness that's gone.*

* * *

Experience is the cream of advertising.

The dates for the New York show are December 28, 1909, to January 1, 1910. The contract for Madison Square Garden was lately signed, and once again the old Garden will echo with the cackle and crow that has for years created an enthusiasm throughout the poultry world.

* * *

The many friends of Mr. John H. Hallock will be pleased to know that he has fully recovered from his illness. We have no doubt but that he is now recuperating at his Pine Top farm.

* * *

Secretary Crawford is to be congratulated on again securing the Garden, considering the conditions imposed. It costs a lot of money to run the New York

show, and it requires men of sterling quality to back the fancy and take the chance the New York management does. That they have succeeded is to their credit and of unlimited value to the fancy.

* * *

There are rumors of a new poultry paper making its appearance at Buffalo, N. Y., this fall, called the Poultry World. The information we have is that Mr. Grant M. Curtis will be the owner and Messrs. Woods, Drevendstedt and Denny as editors, with Mr. Burgess as the artist. There is room for more, and with these gentlemen to guide it, the paper should make good. We extend our best wishes.

* * *

The Canadian Poultry Review has a big feature in its "Jerrylets." We have met Jerry and hope to again see him at the "Ontario" in December.

* * *

Speaking of the "Ontario," to be held at Guelph December 7 to 11, 1909, reminds me that I have called our readers' attention to this show before. It is

HALL'S MAMMOTH INCUBATORS AND BROODERS

Are a practical working success under all conditions. Read this letter of results from rigorous Maine.

PITTSFIELD POULTRY FARM CO.
BREEDERS OF BARRED PLYMOUTH ROCKS

Pittsfield, Me., June 15, 1909

Hall Mammoth Incubator Co.
So. Columbia, N. Y.

Gentlemen:—

Referring to your inquiry as to what success we have had with the equipments bought of you, will say that we have had the very best success. It does all you claimed for it and more. We did not realize how superior it was and how necessary to us until well into this season. We have been favored with a very large increase in sales of day-old chicks and we should have been unable to handle it without this equipment. The incubators are very simple and economical to operate and enable us to sell our chicks at a profit at a much lower figure than we could under the old system of small machines. One man can handle more than twice as many eggs in your incubators than in the old way.

While we are well pleased with the incubators we are doubly so with the brooders and consider them very nearly perfect; we are confident they will raise a much larger percentage of chicks than any other brooder made.

We shall be glad to recommend your equipments to any one inquiring regarding them. They are a God-send to the poultry industry.

Yours very truly,

PITTSFIELD POULTRY FARM CO.

Dr. M. Lee-Smith, Watertown, N. Y.

the big show of Canada, and I, for one, would like to see more American breeders exhibiting there. There are the best opportunities for business, and if our breeders who have the goods will cross over and try conclusions with our neighbors, they will find it to their advantage. We repeat, you must have the goods to win there.

We have served at the two last shows there. At each there were about 5,000 entries, all classes well filled with very good quality the rule. The Canadians are intensive breeders, they know. They are good winners and grand losers. For list and particulars write to Mr. A. P. Westervelt, Parliament building, Toronto, Ont.

..There is never a sky of winter

To the heart that sings away;
Never a night but hath stars to light,
And dreams of a rosy day.

The world is ever a garden

Red with the bloom of May;
And never a stormy morning
To the heart that sings away!

Mr. A. C. Smith, secretary of the American Plymouth Rock Club, informs us that work on the new catalogue is progressing nicely. He is still after a few thousand breeders who by every right should own membership in this club. And we hereby serve notice on all breeders of Barred Plymouth Rocks that we shall keep pounding away until they see and do their duty. Write Mr. Smith at Waltham, Mass., for further particulars.

Artist L. A. Stahmer, since his connection with the A. P. J., has turned out some splendid work in birds and letter designs. If you are in want of something original in a cut, or for printed matter of any kind, address Mr. Stahmer, care of the A. P. J.

The dates for the Baltimore show are January 4 to 8, 1910. The judges so far engaged are Drevenstedt, Minnich, Denny and Schwab. Mr. George O. Brown, 1812 North Washington street, is the secretary. This promises to be an event for the East and South. Their show last year was the talk of the nation, and this, with a record back of it, should prove a still greater success from all viewpoints.

We note it is Editor H. P. Rankin, now of Poultry Gazette. Mr. Rankin is a strong writer, well fitted for the place. With our congratulations we extend to him our every wish for his success.

This issue will resemble a special A. P. J. number; still there is more to come. Realizing that it is impossible for most of our readers to attend the convention, we will make a special effort to report the meeting in this and following issues fully.

We have something special to offer to poultrymen, to represent the A. P. J. at the coming fairs and shows. This work will interest you and prove profitable. Write for conditions.

Mr. William H. Moore, president, and Mr. George S. Faucett, treasurer, of the Philadelphia show, were there early, and stayed all the week to the final meeting. They report all as looking very rosy for the next great Philadelphia show. We

Frank Myers, Mgr., Box 40, Freeport, Ill.

are pleased to again meet these gentlemen, and can assure our friends that Philadelphia's success is assured in their hands. In the great work they have done for the fancy they are ably assisted by a large association of breeders and fanciers of the royal kind.

In our next the echoes of the meeting will be had. The doings there will fill many pages, so will give it in piecemeal, so that all may be digested to best advantage.

Bradley Brothers lately suffered the loss of several buildings by fire. Lightning was the cause. We are glad to add that no stock was lost.

SORRY HE SPOKE.

The carver at dinner held up a rib of pork and observed, humorously: "Here, ladies, is what Eve was made of." "Yes," returned one of the ladies, "and of very much the same kind of a critter."

SORRY SHE SPOKE.

Wife—Why do you always go out on the balcony when I begin to sing, John? (Can't you bear to listen to me?)

John—It isn't that, but I don't want the neighbors to think I'm a wife beater."

The absent ones were missed, but not forgotten. Charlie Welles was mentioned in this, but no doubt he had a contract to catch some blue fish down on the sound. Charlie's interests are many, and as his townspeople insist upon him looking after their interests in filling several offices, we can easily see how it is next to impossible for him to get away.

A. C. Hawkins and Arthur G. Dustin were two more that were sadly missed. They also have interests besides their New York winners to safeguard, and no doubt were on the job.

The rooms of the American Poultry Journal at the Tower House were the

Mecca for many of the poultrymen. The new show poster in particular attracted favorable attention.

Artist Stahmer was the busy man, with his line of work and samples. Orders came in a rush. No matter what your wants are in poultry or catalogue work, he can do it, and do it right.

The Buffalo show was strongly represented at the Falls meeting by Secretary Standart, Mr. Harp and several other officers and members. Buffalo's international show will be one of the features of the year. Their past efforts have given us a show of which we are justly proud, and their future work promises one of the greatest and best shows of the year. The dates are January 24 to 29, 1910.

From the reports at hand, and gleaned at the meeting, the crop of 1909 chickens is just about as large as usual, while improved quality is the rule. The breeders are very enthusiastic over the pros-

"Her Egg Basket Is Always Filled"

Don't You Want More Eggs?

YOUR hens can't lay eggs in abundance, unless they have egg-making food, in abundance. That's true because every atom they use in making eggs must come from the food they eat. It stands to reason then, that for the best results you must feed foods rich in egg-making materials. What are they? Let us see—

Nature knew what she was about when she made Cock, Hen and Chick relish a nice, juicy worm or a good fat bug above everything else.

They relish such food, because it is rich in what the professors call "protein"—and protein is what fowls need, not only to make eggs, but also to make bone, muscle, flesh and feathers, as well as to maintain vigor and vitality.

That is why the hen craves bugs and worms—or some such food rich in protein.

It's a natural instinct for that something which builds up eggs and maintains good conditions.

Now, animal matter or foods, are rich in protein, while only limited quantities are found in the grains and vegetables usually fed.

But hens don't get worms and bugs in winter nor when yarded.

Therefore you must provide something to take its place if you expect to get the best results from your flock.

What is that "something?"

The best thing yet discovered is raw, green bone—the fresh trimmings from the meat market—bones with meat and gristle adhering—fresh cut and uncooked.

Analysis shows that such raw bones and gristle—beef, pork or lamb—contain the same food elements as the bugs and worms.

They therefore make a perfect substitute—not something "almost as good," but identically the same. A food rich in protein, and which costs but little more than the labor of cutting it.

It contains more than four times the protein and egg-making materials of grain, and is rich in all the elements that go to make eggs, bone, flesh and feathers.

That is why it makes hens lay as

nothing else will;—Why it improves the vitality of the entire flock;—Why it makes red combs, bright eyes and glossy plumage;—Why it enables your flock to produce more fertile eggs, larger hatches and stronger, livelier chicks.

Why it promotes growth and development, giving you earlier broilers, earlier layers, and larger market fowls;—Why it more than doubles your poultry profits.

It is cheapest because it is richest in the food elements fowls most need, and because it costs you but little more than the labor of cutting it. It is the best because it contains these elements in their most digestible form, and you know exactly what you are feeding—as you cannot know when you use

so called "beef scraps" or the ready-mixed commercial foods, or the advertised "poultry foods" made from secret formulae, for which such extravagant claims are made. You have to buy them "on faith;" you don't know what they contain.

Fresh, raw bone is greatly superior to "beef scraps," because the cooking and embalming and preserving and drying of the scraps destroy nearly all their value.

Experiment stations and thousands of poultrymen have proved the value of green bone. Can you afford to ignore such valuable food?

The best machine for preparing green bone is

Mann's (Latest Model) Bone Cutter

Mann's turns easily and rapidly, cutting all green bone with all adhering meat and gristle, never clogging; never leaving chunks or slivers wasting nothing.

Its self-governing feed automatically adapts the cutting to your strength, so that any one can use it.

Its open, hinged cylinder is easily cleaned and takes in large bones.

It is strong, durable and requires few repairs. We want you to try one

Our Free Trial Offer No Money In Advance

To prove to you that it is all we claim it to be, we will send you any bone cutter you may select from our catalogue, on 10 Days Free Trial—no money in advance. Just select the machine you want to try. We will ship it to you. If satisfied after the trial, buy it. If not, return it at our expense. Send For Catalogue To-day and make your selection.

F. W. MANN CO.,
Box 56 Milford, Mass.

10 Days Free Trial

No money in advance—no deposit—no red tape.

We send you a Mann's on your promise to give it a fair test.

Try one and see how good it is.

A SAVING of one-half on your poultry fence by using a lesser number of posts and no top or bottom rails. A 4-ft. fence without top rail is as good as a 6-ft. fence with top rail. M. M. S. POULTRY FENCING saves 10 per cent. Write us for particulars.

In One of the Best Sections of the United States for Poultry Culture

The clean, dry soil and mild climate, inducing winter laying and early broilers, is attracting the attention of progressive poultrymen from all over the country to this beautiful section of Southern New Jersey, within easy driving distance, by good roads, of Atlantic City, paying top-of-the-market prices for eggs, broilers, squabs and garden produce. Two main line railroads and large river afford excellent shipping facilities to Atlantic City, Philadelphia and New York. Unlimited market among 12,000,000 people within a radius of 150 miles. Great success has attended the raising of chickens, ducks, squabs, vegetables, fruits, berries and grapes in Southern New Jersey. Pure water. Perfect title. Restricted to white people only. Near the center of civilization and conveniences of modern life, good roads, transportation, etc. A large manufacturing town nearby, with churches, schools, etc. Nature only made one crop of this land. It is growing scarcer every day. Write for our illustrated booklet today.

Daniel Frazier Co.,

691 Bailey Bldg., Philadelphia

peets. This looks like a banner year for all.

* * *

The red men were about the best lot of trained men we have seen. They do know what they need and want, and they had it by a very large majority.

* * *

If we forget to mention some of "Our Folks" attending the convention, we want to be told of it. In a large family of this kind some are liable to be missed for a time, but are never forgotten.

* * *

The A. P. J. post cards were in strong demand. Those moving pictures took well. No doubt in many cases they reminded some of bygone days.

* * *

Figures don't lie. When we see these, as shown by Mr. C. K. Graham, we can then better understand the rapid strides poultry is making, and better realize what the future has in store for us.

AT THE FALLS.

Written by Bystander.

And they say the American Poultry Association is for the poultryman and fancier.

* * *

Why not let the fanciers have a little something to say about making the Standard?

* * *

The man who produces the bird, it seems to us, should know more about that bird or variety than the man who sits at a desk and pushes a pencil.

* * *

We suppose you noticed who did most of the talking at the late A. P. A. meeting?

* * *

Was it the breeder? It was, we don't think.

* * *

Dr. Clark was there; but so were some others.

* * *

Never mind, doctor; better luck next time.

* * *

Charley Latham was there with the smile that never comes off—except.

* * *

Well, never mind; we never noticed it off but once.

* * *

The new auto and E. B. arrived at the same time, but the "Ringlets" were left at home.

* * *

But there was enough "ring" there without them.

* * *

Ask Zimmer how he voted on the R. I. Red question; but be ready to run when you do.

* * *

Railroading is an extensive industry in this country, but it is out of place in A. P. A. matters.

* * *

And the engine may run into an open switch before reaching the end of the road.

* * *

Corey of the "rock pile" or the pile of Rocks was on deck and spoke his little piece.

* * *

Denny was on the job all the time and got busy every time some one pulled the string, and sometimes when the string was not pulled.

Drev seemed to favor the admission of the Games—but.

* * *

When you are not your own boss, what can you do?

* * *

There seemed to be others in the same boat.

* * *

And they do say this is a free country.

* * *

Rigg, the man that used to breed Houdans, was on the floor, but Reds are now his "hobby," and things went his way.

* * *

Richards, from Iowa, who spends his spare moments getting out a poultry paper, seems to be getting into the swim.

* * *

And the "woods," or the town, seemed to be full of "pencil pushers."

* * *

Hicks, the "Indian of the Kaw"—but why enumerate? It was a meeting of poultry editors and publishers, pure and simple.

* * *

With just a sprinkling of poultry breeders for effect.

* * *

In the meantime, the new Standard is on the "fire," and may be "done" in the fall of 1910.

* * *

Providing the "fire" does not go out or the "engineer" go to sleep.

* * *

Curtain.

STAPLER'S SECURITY SEALED LEG BAND 12
Security Sealed Leg Bands. Twelve, 16c; twenty-five, 30c; one hundred, \$1. Write for sample and circular. Stapler's, 429 Ferry St., Pittsburgh, Pa.

75c Secures a copy of "Why Poultry Pays and How to Make it Pay." A 64-page book for the amateur and experienced fancier, and American Poultry Journal for one year.

This Sanitary Concrete Nest for 10 cts.

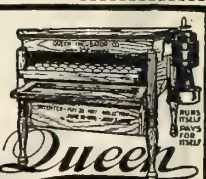

They increase the egg production, are indestructible, disease and mite proof. Can be made at home for 10 cts. each. Full directions and working plans, 25 cents. Particulars free.

The Banta-Bender Co., Dept. 10, Ligonier, Ind

QUESTIONS AND ANSWERS

Questions will be answered in this department only when full name and address is signed by the writer.

Question.—What kind of feed is the best, and how and what to feed at different meals?

Kosciusko, Miss.

S. J. S.

Answer.—Oats, 15 pounds; cornmeal, 5 pounds; bran, 5 pounds; shorts or wheat middlings, 5 pounds; clover meal, 10 pounds; meat meal or cut green bone, 100 pounds, making 50 pounds of a dry mixture. For a flock of 25 hens give 4 pounds of this mixture each morning, made into a crumbling mash by wetting with water or skim milk if obtainable. At noon give 1 quart of wheat and at night 1 quart of corn. The noon and night feeds should be given in deep litter and the grains can be alternated, giving corn and wheat one day and wheat and oats the next, or corn and oats. The idea is to give a change. This ration is for fowls that do not have access to a range but are confined in houses and runs practically free from vegetation. If free range can be given at a season of the year when animal and green food can be obtained by the fowls, omit the noon meal and do not use the clover meal and meat meal or green cut bone in the mash.

Question.—(1) Houdans, 3 to 5 years of age, do they still lay? (2) Are the birds grown up larger than Leghorns? Commack, L. I.

H. K.

Answer.—(1) Yes, but the yield is greatly reduced as they advance in age. (2) Yes.

Question.—I have a year-old cock that has something the matter with him. The skin on the back of his head and neck is red, and the plumage is frazzled and stripped as though something is eating the feathers, but I can't find anything. Have been using carbolated vaseline, but it doesn't seem to help it any.

G. N. R.

Kirkland, Wash.

Answer.—This is probably due to some feather-eating hen. Apply bitter aloes to the feathers.

Question.—(1) What kind of a fowl do you think best for my purposes? I would want a hen that will set pretty good, but not too broody, that can stand a little cold, about a medium-sized chicken. They will be allowed free range, but they must not be wild, and one that is good laying and fairly good eating. (2) What kind of food do you think best for such a chicken? (3) What is the matter with some of my chickens? They will walk, then stagger and fall down as though intoxicated. They will eat if food is set before them, but very little. There seems to be nothing wrong with them otherwise. I kill most of these chickens, because it seems to be contagious.

Helenville, Wis.

R. R.

Answer.—(1) Any of the American varieties will answer your purpose, such as Plymouth Rocks, Wyandottes, Rhode Island, etc. (2) Any one of the various poultry foods advertised in these columns. (3) From the meager description given, we believe the trouble is

improper ventilation in your poultry house and possibly a wrong system of feeding.

Question.—What is a good recipe for whitewash? Newton, Ky.

C. H. H.

Answer.—Slake a half bushel of lime in boiling water, after which strain it to remove all sediment. Add two pounds of sulphate of zinc, one pound common salt and a half pound of whiting thoroughly dissolved. Mix to proper consistency, with skim milk if possible, and if not, use hot water. Stir in thoroughly a half pint of liquid

glue and apply the wash while hot. It may be colored if desired by using yellow ochre, ultramarine blue, lamp-black, etc. It will compare favorably both in appearance and durability with a good quality of paint.

Question.—I have a young pullet which has a double set of flight feathers on one wing, second set is growing underneath and turn in opposite way. Would be pleased to have you answer through your next issue of Journal if this is a disqualification or defect, and what a judge would cut for same, its cause, also a remedy, if any, and oblige. Sylvania, O.

C. W.

Answer.—This bird would be disqualified. We cannot suggest any remedy.

Question.—Why was the Sherwood fowl thrown out of the Standard? Watertown, N. Y.

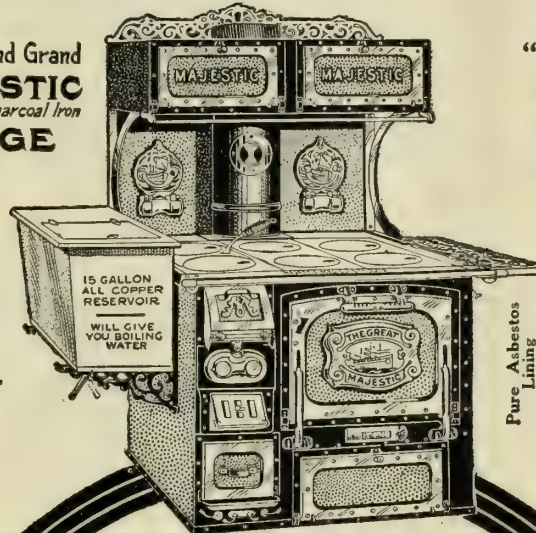

I. E. F.

Answer.—Because they are used for fighting, which is not considered a legal practice in this country.

The Great and Grand MAJESTIC Malleable and Charcoal Iron RANGE

With water fronts if wanted for pressure or other boilers

PERFECT BAKER FUEL SAVER

"The Range With a Reputation"

Body made of Charcoal Iron, adding 300% to life of Range

Pure Asbestos Lining

There's Only One Best

—that's the Great MAJESTIC—it's so easy to make claims—but here's the proof—MAJESTIC Ranges outlast three of any other make, because they're the only ranges made exclusively of Malleable and Charcoal Iron and they just can't break, crack or rust. Then, the air-tight joints and pure asbestos lining cuts your fuel bill in half and gives you a perfect baker every day in the year.

The MAJESTIC has a 15-gallon, all copper, moveable reservoir which heats water in a jiffy. No springs in the oven door—when dropped it forms a rigid shelf bearing any weight—oven rack slides out automatically, holding anything secure that happens to be on it. Another feature of

The Great and Grand MAJESTIC Malleable and Charcoal Iron RANGE

is the open end ash pan which acts as a shovel and a small ash cup under the ash pan—no muss or danger of fire about a MAJESTIC.

Each exclusive MAJESTIC feature makes this range more practical, more serviceable, more durable—the best range your money can buy regardless of price.

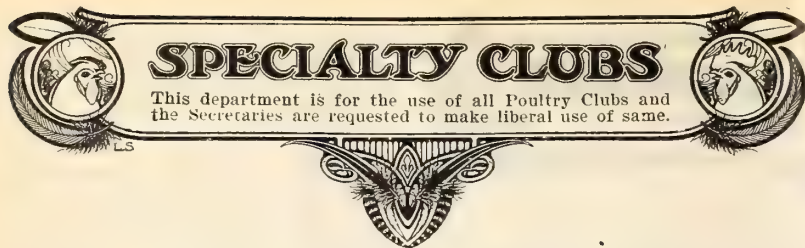

MAJESTIC Ranges are sold in nearly every county in forty states. If your dealer doesn't carry MAJESTIC Ranges, write us for the name of a dealer in your locality who does, and we'll send our booklet:

NATIONAL BLACK ORPINGTON CLUB, NOTICE!

Beginning with this month all new members sending in their initiation fee of \$1 will be credited in full with dues to October 1, 1910, and will be entitled to compete without further charge for all cups, medals and diplomas offered by the club to its members.

The present condition of the club is most flourishing, an increase of over 100 per cent of membership having been effected in the last six months. The club now plans a vigorous advertising campaign, whose purpose is to put the Black Orpington at the head of the procession in popular esteem. A new directory will be gotten out very shortly and all new members, who send in their dues promptly, will have the advantage of this publicity without charge. The club expects to spend several hundred dollars advertising the breed the coming year. The advertising campaign of last year resulted in the sale of many thousands of dollars' worth of stock by club members and many lapsed members have come back into the club and are giving it loyal support because they see that the club

is producing tangible results in actually booming this great breed of Black Orpingtons.

Those breeders who are not in the club would do well to send to the National Secretary for a copy of the Club Catalog, of which there remain but a few copies. The price to non-members for the Catalog is 10 cents, but it is free to members.

The National Secretary will be glad to have the name and address of every person who is now breeding the Black, also of any other breeders contemplating a change. Address Milton W. Brown, secretary National Black Orpington Club, Station L, Cincinnati, O.
 Milton W. Brown,
 Secretary National Black Orpington Club.

NATIONAL SILVER-PENCILED WYANDOTTE CLUB.

Mr. Ed Carver, of Columbia City, Ind., was recently chosen president of the National Silver-Penciled Wyandotte Club of America. Mr. James Wassen, of Grand Rapids, Mich., is the secretary-treasurer. This honor comes to Mr. Carver unsolicited, and we are

pleased to hear of it. He is a member of the firm of Carver & Avey, Columbia City, Ind., and has bred the Silver-Penciled ever since they were originated. They also breed some of the finest Partridge Wyandottes we ever saw and have advertised in A. P. J. for many years.

WHITE WYANDOTTE SPECIALS FOR CHICAGO.

The National White Wyandotte Club offers the following cash specials to be competed for by club members only—any person may become a member by sending their name and address, together with \$1 dues, to J. M. Cline, state secretary, Downer's Grove, Ill., or to the national secretary, F. S. Hawn, Youngstown, Ohio, and have same in their hands prior to December 1, 1909: Cocks—First, \$7; second, \$5; third, \$4; fourth, \$3; fifth, \$1. Hens—First, \$7; second, \$5; third, \$4; fourth, \$3; fifth, \$1. Cockerels—First, \$7; second, \$5; third, \$4; fourth, \$3; fifth, \$1. Pullets—First, \$7; second, \$5; third, \$4; fourth, \$3; fifth, \$1.

The Great Mid-West Poultry and Pet Stock Association offers the following cash specials in addition to their regular cash prizes: Best display, \$15; second best display, \$10; best shaped male, \$5; best shaped female, \$5; best cock, hen, cockerel and pullet, \$10; second best cock, hen, cockerel and pullet, \$5.

A CORRECTION.

In our August issue in our list of Specialty Clubs we listed the American White Plymouth Rock Club, Seth W. Gregory, secretary, Delevan, Wis. This was an error, as this club is out of existence and in its place is the White Plymouth Rock Club, H. Ward, secretary, Bethel, Conn. Mr. Ward will be pleased to furnish our readers any information they desire in regard to this club.

NORRISTOWN, PA.

The second annual show of the Norristown Poultry, Pigeon and Pet Stock Association will be held from November 30 to December 4, 1909, inclusive. The officers of the association for the year 1909 are: President, G. K. Morehead; first vice-president, William H. Patten; second vice-president, A. J. Fell; secretary-treasurer, George C. Whittam; superintendent of show, H. M. Kenner.

The following well-known judges will place the awards: Poultry classes, J. D. Nevins, J. W. Poley, William J. Stokes, F. G. Bean, D. G. Witmyer and A. J. Fell. Pigeon classes, Rudolph Swiesfurth, Thomas Scholes and Thomas Rivel.

George C. Whittam, Secretary.

The second annual exhibition of the Mercer County Poultry and Corn Association will be held at Aledo, Ill., December 13-18, with Judge B. F. Dinwiddie placing the awards. This will be one of the best shows in Illinois and Secretary Harry Morgan will be pleased to mail you a catalog.

Keep everything clean, chicks, coops, feed and drinking vessels. Indigestion, sickness and loss will result if you don't.

Subscription Department

WE'RE OFF.—Our great fall subscription contest opens September 10, 1909—closes December 31, 1909.

Have you six prospective subscribers, including yourself? If so, get our great offer. You get over \$1.60 in value. We get \$1.50 in value.

Send for this great offer today. Get one of our new books, "Origin and History of All Breeds of Poultry," absolutely free, in addition to a good commission or other valuable premiums.

We are giving away over \$1,000 in prizes. You get a premium for only two subscriptions.

First prize, \$200 cash; second prize, \$100 cash. Forty-eight other prizes, value \$500.

Beautiful premiums valued at from 50 cents to \$5 each given for two to fifteen subscriptions.

Remember, agents send us only 35 cents and receive these special premiums and grand prizes or a liberal commission and a chance for the grand prizes besides the book, "Origin and History of All Breeds of Poultry," for the first six subscriptions.

ONE WORD ABOUT THE BOOK, "ORIGIN AND HISTORY OF ALL BREEDS OF POULTRY."

This is the greatest book on poultry ever published. Contains colored illustrations of 198 fowls of the Standard variety, painted from life. It explains in detail where each variety originated, its history since being recognized by the Standard and its qualifications.

It explains about breeding the various varieties, not in a listless jumble of words, but in a heart to heart talk. It gives each breed proper attention and one subject is treated upon one page. Thus you are not misled when studying up on a certain breed.

We want every breeder to have one of these books, we are giving this book free to poultry raisers, as stated above. If you desire one, send your application today and we will mail you the offer.

Mr. A. S. Johnson, who won \$100 on the last contest, sold seventy of these books at \$1 each to breeders in his vicinity.

Mr. J. W. Upton, who won \$50 on the last contest, sold nearly as many at \$1 each, people who see the book want it, it is worth many times the price of \$1 to every poultry breeder and we want every breeder to have one.

Send us six subscriptions, together with \$1.50, and we will send you this grand book, postpaid, by return mail; or, better still, send a postal for our complete offer, which explains in detail the great fall subscription contest of American Poultry Journal. Read what others say about it.

Mr. J. W. Upton, of Fairmont, W. Va., winner of the third prize, \$50 cash, writes as follows, under date of July 14, 1909:

American Poultry Journal Pub. Co.,
Chicago, Ill.

Gentlemen: It is with pleasure that I acknowledge the receipt of your check for \$50, third premium in recent grand prize contest—and thank you most sincerely for that and the prompt, courteous treatment I have invariably received from you. Also please accept thanks for the brush and comb set you

kindly sent me for May contest. It gives me pleasure to aid in increasing the circulation of the Journal, as I believe it should be in the hands of everyone who is interested in poultry.

Wishing you abundant success, I remain,
Yours respectfully,

J. W. Upton,
Route No. 1. Fairmont, W. Va.

Mr. Upton is a breeder of White Leghorns, White Wyandottes and White Plymouth Rocks of the winning kind.

Mr. Upton evidently likes white and therefore knows when he is being treated "white." He is not satisfied with writing the above letter only, but sent us the following in the same envelope:
Fairmont, W. Va., July 14, 1909.

American Poultry Journal Pub. Co.,
Chicago, Ill.

Gentlemen: I enclose an acknowledgement of check and am sending in same mail my photographs, as requested, and also enclose a stereo photograph of my home, with a few of my chickens, which you may publish if you wish.

Please return photographs when you are done with them.

Accept my thanks for brush and comb set received on May contest. Am sorry to appear slow in sending photographs and testimonial, but just this morning got the photographs finished.

Thanking you most cordially for your prompt and courteous treatment, I beg to remain,
Yours most sincerely,

J. W. Upton.

Mr. Ira Sitterly, winner of the fourteenth prize in our last contest, writes as follows:

Gloversville, N. Y., July 22, 1909.

Mr. George Bates,
Editor of A. P. J.

Dear Sir: I received the watch that I won as the fourteenth prize in your subscription contest. It is a fine time-piece and I am more than pleased with it. This is the seventh prize I have won on your subscription contest. They have all been valuable prizes. I have spent no time in getting subscriptions

Dare You Throw Burning Coals On Your Roof?

Burning coals thrown on a roof of Ruberoid harmlessly sputter away—and die out.

They do not set fire to the Ruberoid. They do not set fire to the timbers underneath.

Yet a roof of Ruberoid is more than mere protection against fire.

It is protection against the cold of winter. Being a perfect non-conductor of heat, it keeps the warmth of the house in.

It is protection against the heat of summer. It keeps the building cool by keeping the sun's heat out.

Seventeen Years of Test

And it is more. It is wind proof, rain proof, snow proof. It resists acids, gases and fumes. Because of its great flexibility, it is proof against contraction, expansion and the twisting strains which every roof must bear.

A roof of Ruberoid is practically a one-piece roof.

For with every roll comes the Ruberine cement with which you seal the seams and edges—seal them against the weather and against leaks. You will find many roofings which look like Ruberoid—but none which wear like Ruberoid.

For the first buildings ever roofed with Ruberoid—more than seventeen years ago—are still waterproof and weathertight.

RUBEROID

(TRADEMARK REGISTERED)

Be sure to look for this registered trademark which is stamped every four feet on the under side of all genuine Ruberoid. This is your protection against substitutes which many dealers brazenly sell as Ruberoid. Ruberoid is usually sold by but one dealer in a town. We will tell you the name of your Ruberoid dealer when you send for our free book.

These buildings are the oldest roofed with any ready roofing. Ruberoid was by several years the first.

And of more than 300 substitute roofings on sale today, not one can employ the vital element which makes Ruberoid roofing what it is.

This vital element is Ruberoid gum—made by our own exclusive process.

It is this wonderful Ruberoid gum which gives Ruberoid roofing the life and flexibility to withstand seventeen years of wear where other roofings fray out in a few summers.

These substitute roofings are made to resemble only the uncolored Ruberoid.

Ruberoid can also be had in colors. It comes in attractive Red, Brown and Green—suitable for the finest home.

The color is not painted on. It is a part of the roofing. It does not wear off or fade.

Get This Free Book

Before deciding on any roofing for any purpose, get our free book which tells what we have learned in twenty years of tests about all kinds of roofing. This book is frank, fair and impartial.

It tells all about shingles, tin, tar, iron and ready roofings.

To get this book, address Dept. 77, The Standard Paint Company, 100 William Street, New York.

MINERAL SURFACE - NEEDS NO PAINTING

A MATITE roofs need no painting. The owner need never look at them; they take care of themselves. They are "no-trouble" roofs. They present to the weather a *real mineral surface* against which storm and wind and snow are absolutely powerless. This surface does not require constant painting like the smooth surfaced or so-called "rubber" roofings. The mineral surface is far better than paint.

Of course before Amatite came, the "smooth surfaced" roofings were the best kind to buy. Now that Amatite has been invented and thoroughly tested by years of use, painting a roof is wasteful and unnecessary. The cost of painting a "rubber" roofing from year to year will soon cost more than the roof itself. That is why everybody who knows about roofing is buying Amatite nowadays. *It needs no painting.*

Amatite is easy to lay. Anyone can do the work. Large headed nails and liquid cement come free with every roll.

We shall take pleasure in sending you a sample of Amatite with our compliments upon request.

as I have no chance to get out. If I had the time to go out I could get twice the number. Am sorry I cannot send you my photograph at present. Thanking you again for the fine watch you sent me, I remain,

Sincerely yours,

Ira Sitterly.

Mr. Sitterly, as you will note by his letter, has won seven prizes on seven different contests, so he must be satisfied that the subscription contests of American Poultry Journal are conducted strictly on a fair and square basis. If you have the slightest doubt please write direct to any of these agents for information.

Mr. James Christopher, winner of the sixtieth prize on last year's contest, writes:

Heyworth, Ill., July 10, 1909.

American Poultry Journal.

Dear Sir: I received my prize all O. K. Am well pleased, as I think I have been well paid for my trouble. Your count of thirty-three subscriptions

J. W. UPTON.

Winner of Third Prize in Our Tenth Annual Subscription Offer.

is correct. I will say that I have always received courteous treatment as agent for the past seven years for one of the best poultry journals published, the good old reliable American Poultry Journal, which is always welcome at my place. Also for best results as an advertising medium. This I know, as I have been a breeder for thirteen years of Barred and White Plymouth Rocks, Christopher strain. I beg to remain,

Yours truly,

James Christopher,

Prop. Kickapoo Poultry Yards,
Heyworth, Ill.

You will note that Mr. Christopher is a breeder of Barred and White Plymouth Rocks and that he is also an advertiser in American Poultry Journal. We enjoy to have advertisers take an interest in this work as they are the people who derive the benefit in the end.

Mr. Christopher has derived his benefit at both ends this year, viz., by winning a prize for securing the thirty-three subscriptions and by educating his neighbors in fancy poultry raising by having them subscribe for American

Poultry Journal and creating a demand for fancy breed stock, such as he breeds.

We want you to send for our great fall offer, which opens the 10th of this month, and help the good cause.

Remember, premiums are given for only two subscriptions.

ASSOCIATIONS AND SHOWS

Secretaries are requested to send in news items of interest about their show for this department.

POULTRY AT THE ILLINOIS STATE FAIR.

The premium list of the great Illinois State Fair to be held in Springfield, Ill., October 1 to 9 is now being distributed, and every poultry fancier in the Middle West should have one. The list offers premiums amounting to over \$70,000, and in addition to the generous premiums offered the Illinois State Fair, with its immense buildings and beautiful grounds is considered the greatest in the United States.

Special attention will be given to the Poultry Department this year. Mr. George Cooper, Mokena, Ill., one of the most prosperous farmers in the state, is superintendent of the department. Mr. Cooper is very anxious to make the Poultry Show at the Fair second to none, and to this end has given O. L. McCord, Danville, Ill., full charge of the Poultry Department.

Mr. McCord needs no introduction to the poultry fanciers of the United States, being a judge and breeder of national reputation, and has had much experience in the conducting of poultry shows.

The Poultry Building at the Illinois State Fair is the finest of its kind in the country and this year holds still greater attraction for the fancier by the placing of new Empire coops throughout. In the past the Poultry Department has been sadly neglected, having been in charge of people who knew nothing about the arranging or conducting of a poultry show; therefore Mr. Cooper and Mr. McCord are putting forth every effort to please the fancier, and the exhibition will be run along the lines of the best and largest winter shows. A large tent will be erected just north of the Poultry Building which will be headquarters for the Illinois State Poultry Association and the meeting place of all Specialty Clubs, including the meeting of the Five State Rhode Island Red Club and the School of Instructions. The American Plymouth Rock Club, the Wyandotte Clubs and Rhode Island Red Club are offering their specialty ribbons for the best shape and color, male and female.

For further information regarding the Poultry Department address O. L. McCord, Danville, Ill.

For premium list, J. K. Dickirson, Springfield, Ill.

MEMPHIS, TENN., SEPTEMBER 28
TO OCTOBER 2.

Secretary R. C. Stockton, of the Tri-State Poultry Show, Memphis, Tenn., reports that their Poultry Show will open September 28 and continue through Saturday, October 2.

Great interest is being taken all over the South, and he has already booked a large number of fine birds from all over the United States. Their new building will be the finest ever built for the care and display of poultry, being triangular in shape, 20 feet front on north end, 300 feet long and 60 feet on south end. This will give 13,500 square feet of floor space, and 3,300 running feet of new cooping. It has large windows on both sides, with a double row of Texas skylights. This will insure the best of ventilation and light. Every detail has been carefully looked after for the health and comfort of the birds. They will be fed on the purest mixed grain; plenty of fresh water, grit and green stuff will be provided. It will pay any poultryman to attend this show, but if you cannot be present send your birds. They will be given every attention upon their arrival and carefully looked after.

With such judges as Theo Hewes, F. J. Marshal and S. T. Campbell you may depend upon getting all that is coming to you in the way of prizes. For fur-

Coulter, Frankfort, Ind.; Frank Hare, Quincy, Ill.

BUFFALO INTERNATIONAL SHOW.

By S. A. Merkley.

The above cut illustrates the coming

Buffalo show—notice the benign expression on Uncle Sam and the confiding smile of Miss Canada as they clasp hands in friendly greeting at Buffalo. Of poultry, pigeons and pet stock they will each bring their best to this "Great International Show"—Buffalo upholding the Standard of Perfection upon which is the friendly contest for first prize.

International Show.

This show has been planned by Canadian fanciers and fanciers from the States who are uniting to make it second to none in 1910.

At Buffalo.

Being centrally located, Buffalo was chosen in 1873 as the meeting place of the poultry enthusiasts to organize the great American Poultry Association. In 1901 the Pan-American again established Buffalo as a show city, and again in 1910 it will be demonstrated that the poultry fanciers of the United States and Canada were right in their selection of Buffalo as the place for an International Show.

Utility and Fancy.

The utility bird will have a place in the show and there will be a nicely-quiet and trips to Niagara Falls and some of the large poultry plants in the vicinity on the card.

Low Rates.

The Buffalo Chamber of Commerce will arrange for greatly reduced rates on all roads to Buffalo during the show.

Specialty Clubs.

Many Specialty Clubs have already selected Buffalo for their 1910 annual meet.

Cash Specials.

The developed enthusiasm for poultry shows and the unbounded confidence

INTERNATIONAL SHOW

POULTRY, PIGEONS AND PET STOCK
CONVENTION HALL
BUFFALO N.Y. JAN. 25-29, 1910

arranged exhibition of dressed poultry and poultry products in addition to the magnificent exhibition of Standard-bred varieties of poultry, pigeons and pet stock.

Judges.

With a long list of popular and competent judges from both sides it is an assured fact that the best bred birds will bring back the blue from Buffalo.

New Clubs.

The newly organized "Get Acquainted Club of Buffalo" will have charge of the entertainment of visitors. Ban that Buffalo's business men have in the management of this show guarantee a list of cash specials never before equaled, thus demonstrating that "Buffalo means business."

All communications addressed to the Poultry Association Headquarters, C. J. Standart, secretary, 309-11 Brisbane building, Buffalo, N. Y., will receive prompt attention.

A big Poultry Show will be held at the Newark (Mo.) Fair on September 7-10. B. F. Dinwiddie will do the judging and premium lists may be obtained of J. C. Callaghan, secretary, Newark, Mo.

Winners at Cleveland and other shows. Some fine yearling breeders yet for sale at bargain prices. A grand lot of young birds now ready for the show room; bred from a son of a Madison Square winner. Blue barred, Prices reasonable. Every sale guaran-

R. C. STEWART - R. F. D. 2 - BIG RAPIDS, MICHIGAN

Barred Rocks

snappy birds, bred and raised right; having stamina and vigor, secured only on free range. Please or your money back. Write me, mention American Poultry Journal.

Govert's Barred Rock Farm

Willoughby, Ohio

WESTERN NOTES

by Amos Burhans

S. B. Mills and Walter Perkins, both of Ames, Iowa, are booking more shows than usual this season and their crops of birds are doing fine, so we learn by grapevine wireless.

No one has to name the state he's from when they mention U. J. Shanklin, as he is becoming better known annually, and so are his Partridge Cochins.

B. F. Weymer is one of the old timers in Iowa Barred Rocks. He will be into the prize money again this season.

The Warners at Bloomfield are growing a lot of early birds and will not be found idle when the shows come on.

H. C. Clymer, our old-time acquaintance of Bertram, is one of the well known and spoken of Iowa fanciers and breeders. He is producing them better every year.

The Buff Rock alleys, in a good many Iowa shows, are sporting blood from the M. E. Kraft flock and the coming season will see them extending themselves even again.

Ansley, Neb., is one of the "pulling-est" towns for chickens you ever heard tell of. Out there they give the chickens the opera house and anything else they want. Their annual show is a society event and they have held two of the best starters the writer ever saw. Their last show was the cleanest in point of orderliness the writer ever saw. Messrs. Bark, Varney, Gaines, Kelley, Ford and other fanciers are the boys who put things in good shape out there and their officers, both among the fanciers and the public spirited men, are the sort of men who make the fancy what we are glad to see it.

The Nebraska Poultry Company report that the past two years have seen a great extension in their business of eggs for hatching and fowls for breeding purposes. This firm is actually breeding from extra choice free range birds that are all carefully mated and but one breed on a farm, the entire control of these birds being kept by the manager, W. F. Holcomb, one of the

best all around judges who ever donned a duster.

The Smiths, A. H. of Golden 'Dotte fame, and E. E. of the White China geese, Pekin ducks and White Wyandotte reknown, will as usual be at the Lincoln state fair with a big string.

Abilene, Kan., is the hotbed of Buff Rocks in the west. The whole state is strong in them, but Abilene put them on the map.

A White Rock fancier by the name of Edw. Fuhrman is going to be more

than locally heard of the coming winter. Watch the American for his announcements.

* * *

The P.-B. farm White Wyandottes are blooming gorgeously at this writing and the coming season will see them take greater honors than ever. They are devoting eighty acres to the Whites and building up a fine business.

—o—

J. L. Helpman, Freedom Station, Ohio, is offering 500 Buff Leghorn cockerels at half price. He breeds the Arnold and Imported strains, and his fowls have a record of 260 eggs, and he always wins the blue wherever he exhibits. Mr. Helpman is one of the oldest breeders and judges of Buffs in the United States, and is making a clearance sale of male birds to make room for fall. Give him a trial, and mention American Poultry Journal.

WHITE ORPINGTONS BLACK

My birds are the low down on shank kind. My Whites are white to the skin. Eggs from three fine pens of each \$3, 13; \$5, 26. E. I. Bradley, Hillsdale, Mich.

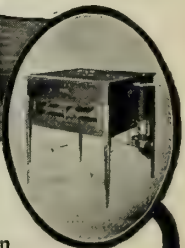

Easy to Read---Stays On

After trying various others, Breeders, Judges and Poultrymen unanimously declare

THE "CONVENIENT" LEG BAND

—the best and most satisfactory they have ever seen. Made of Aluminum—sizes for all breeds, raised figures, quickly put on and won't lose off. The only Bands that are bent ready for use. 12 bands for 20c; 30 for 45c; 60 for 75c; 100 for \$1.00. Sample free.

H. O. SHAW, Box 103, Grinnell, Iowa

NOW YOU CAN RAISE SUMMER CHICKENS

Nutrum Salts makes it possible. Bulletin

No. 2 tells why. If your Chickens are not living well or growing rapidly, send for a free copy of the Bulletin.

My discovery has also made easy the growing of broilers and soft roasters in the fall and winter for the time of high prices.

Model Incubators hatch every hatchable egg. Model Brooders, with Nutrum Foods, raise every chick. If you are raising poultry and do not know about this wonderful discovery, Nutrum Salts, you had better inquire.

I make everything the practical poultry raiser needs. Model Food Boxes, Drinking Fountains, Lice Spray, Lice Dust, Sulphur Candles, Roup Cure, Cholera Cure, Disinfectant, Scaly Leg Ointment, Poultry Remedies, Fly Driver, Naphthalene Nest Eggs, Toe Markers, Poultry Foods, Etc. All of the same high quality as the Model Incubators and Brooders which you will soon be wanting.

Get busy now. It's your opportunity.

BIG PRACTICAL LAKEWOOD FARM.

By Frank L. Platt.

Nature is a partner at Lakewood and, while silent, her factors are dominable in the farm's favor.

Miles of light sand—the prehistoric bed of the Atlantic—surround Lakewood. Mud is unknown. While the yards soon become barren they do not taint, for the droppings are quickly absorbed by the dry porous sand.

Situated in the pine belt of New Jersey winter's winds from the north and west are tempered by blowing across the vast area of timber. Located four miles from the sea shore, which is to the south, the warm Gulf Stream that

stance, the hatching begins in September and continues while conditions are against it.

Brown wanted eggs, but he wanted white shelled eggs. The New York market called for them and paid a premium for them. The eggs that were shipped into New York city from the midwestern states are brown. They are the eggs that are largely speculated in and go into cold storage until the western farmers' hens, drinking snow water, cease to lay—they are candled and sold on a commission man's margin.

White eggs—strictly fresh—at a premium, was Brown's hobby. The Single Comb White Leghorn was the fowl selected. And, through the enthusiastic pursuit of this hobby and the develop-

ment shown. Broilers being the objective end, the hatching is largely done in January, February and March. Of course the pullets commence laying early and lay throughout the fall, but they will moult by Thanksgiving and, therefore, are not productive throughout the winter, when eggs and feed alike are highest.

However, the dual purpose Leghorn at Lakewood is a profit maker, for, while the broilers are cockerels hatched in the spring time with the pullets destined for next winter's layers, the summer prices for these broilers are remunerative. From July until October there are three classes: Three-quarter pound squab chickens, \$1 per pair; 1½ pound broilers, \$1.25 per pair; two pound petite roasters, \$1.50 per pair.

The big kind of Leghorn grown at Lakewood is the hen for the purpose of eggs and broilers. It is, indeed, Brown's early hope—the hen of destiny.

When Lakewood was started stock and eggs were purchased from many breeders in many parts of the country. It was a start from many footholds. Each flock of different heritage and environment was a pillar in the foundation on which the Lakewood Farm layers—the big kind—were built. In fashioning the superstructure Brown proved a skillful breeder. He saw in his mind's eye the profit paying type. It was a strong head, bespeaking vitality and

flows up the eastern coast causes winter at Lakewood to be continually enjoyable out of doors.

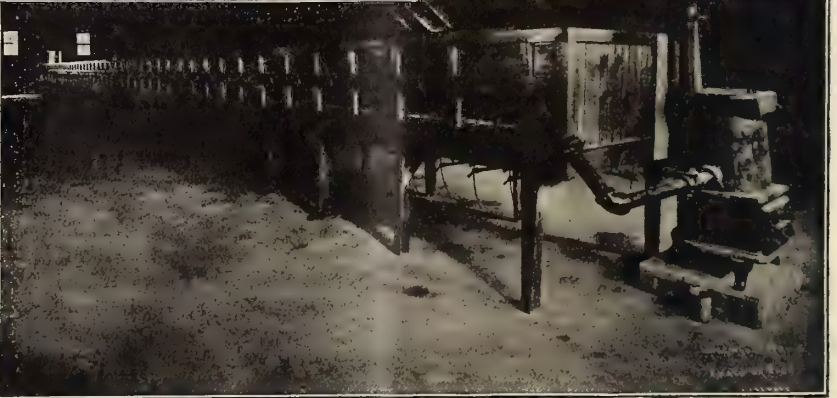

Such an ideal climatic environment makes the town of Lakewood a delightful winter resort for New York patrons, and at Lakewood Farm it is congenial to fully successful poultry work.

While nature is a co-worker, there is another partnership at Lakewood. Brown—Austin G. Brown, president—works in double harness with enthusiasm. Whether it be the establishment of a branch store in New York or mixing the grains in the feed room, Brown is enthusiastic.

When Brown went to Lakewood, seven years ago, the farm was untilled and abandoned. Brown farmed it. Not for a product that comes from the soil, but for a crop whose cackles are quoted "strictly fancy" in the market. Today Lakewood Farm is the most widely known and most talked of poultry plant in all the eastern states. It is the growth of enthusiasm and a fixed purpose.

Like the captain of a line who puts to sea, Brown, before letting out sail in the poultry game, knew a destination for which he must make. His purpose was fixed. And that purpose was, "get a commercial profit."

The plan was to establish an egg farm. In egg farming the risk is least, for the hatching is done in the spring time, when all nature lends herself to reproduction. In roaster growing, for in-

THE PRESENT BROODING SYSTEM AT THE LAKEWOOD FARMS HAS BEEN ABANDONED AND THE HALL SYSTEMS ARE BEING INSTALLED.

ment of the Lakewood Farm layers, 32,877 eggs, at 10 cents a dozen above New York quotations, went to market from January to May, inclusive, 1909.

The first few years Brown was particularly selective of the birds that went into the breeding pens. He had conceived of a dual purpose Leghorn, a prolific yet large fowl, that the cockerels might be turned as broilers and pay the cost of raising the pullets to laying age.

Here let a distinction be drawn, and the disadvantages of a broiler plant in mild New Jersey, maturing the pullets for life service in the laying houses,

precociousness, a long back with perceptible width across the shoulders, a long keel with the legs set wide apart, and a well developed abdomen of an active egg laying hen. Brown did not let the passing fancies of the show room judges outweigh the standards he set. He knew that eggs were the product of a delicate process of digestion and secretion, and a hen to be a great layer must have strength sufficient for the assimilation of the food necessary to continued production. Brown knew there was a strong tendency in the Leghorn race to lay, and if that tendency was to be made a dividend paying as-

set the race must be bred for health and to a size and type that, with proper nutriment, the machinery starting, would be equal to its work.

In making selections toward this end the sports, not the culls—the sports upward, were bred. In every flock of growing youngsters there are those the law of whose nature seems to be growth. Birds of this sort are growers. They are peeping, not pining, chicks when they leave the shell, and they grow from that time on. Nothing seems to interfere with them. Their organism is properly adjusted. Self-reliant, vigorous growers—these have been marked for breeders at Lakewood.

Growth in a climate whose conditions were suitable for the development of large birds of strength, productiveness and fast growth, and the Lakewood standard embodying these basic utility factors, the stock, carefully selected and mated, made evident advances with each season's breeding.

Favorable climatic conditions, a considerate standard, together with correct feed and good care, developed a flock that, in 1905, returned a profit of a little over \$7,000. The same year they established the unprecedented record of 169 eggs per hen. This was the average for all the layers on the farm. One hundred and sixty-nine eggs sold at York commission prices would bring \$3.38, or, at Lakewood's cost of maintenance, a net profit of \$1.63 per hen.

News in the poultry world travels fast, and breeders soon were asking, "What manner of fowl is this that is producing eggs and broilers at such a profit above gross cost?"

Brown, appreciative of the fowl he had bred, and seeing the increased profit from selling eggs for hatching and stock birds, hung his shingles high in the poultry press and told of the advantages of Lakewood Farm layers. He knew that mediocre advertising would only be a waste, and he had never done any copy work, yet he started in to do the best he could, and strived to hit upon eminently attractive phrases. The ads, but especially the literature, of Lakewood is a credit to Brown. It is classy, and "classy," you know, is a quick combination of "class" and "snappy." It never deals with failures or the probability of them, and, filled with good cheer, it deflects an enthusiasm that attracts.

As a breeding establishment Lakewood Farm has grown marvelously. This past season 39,912 eggs were sold for hatching; day-old chicks were shipped; besides 32,877 sterile, fresh, premium eggs marketed the first five months. Then there is an enormous sale of stock birds, and additional, for the commercial revenue, the trade in broilers is to be mentioned.

Lakewood Farm itself consists of sixty acres, but this year this land holding has been increased and the plant will be enlarged. Nearer New York, on the Central Railroad of New Jersey, that runs from the Metropolis through Lakewood to Atlantic City, is Eatontown. Here the Lakewood company has acquired a farm of 170 acres, and are building and equipping a large plant to be run in conjunction with Lakewood Farm. With this enlargement and addition there will be a total housing capacity for 30,000 laying hens.

To market the products of the farms a branch store has been opened at 517 West Twenty-third street, New York city. Two sub-stations are about to

The Coming Universal Use of DE LAVAL CREAM SEPARATORS

The same economical considerations which have already brought about the practically universal use of creamery and factory sizes of DE LAVAL Cream Separators are absolutely certain to accomplish the same result in the use of farm and dairy sizes of such machines within the next five years. This is no mere advertising claim but the simple statement of a conclusion based on the logic of facts as positive as to outcome as the solution of a mathematical problem.

The same considerations of greater capacity; closer separation, particularly under hard conditions; better quality of cream and butter; more economical operation, and greater durability are bound to ultimately accomplish the same result in the use of small as of large sizes of cream separators.

But naturally it requires longer and is vastly more of an undertaking to educate the 2,500,000 present and prospective American users of farm sizes of separators as to the importance of separator differences than the 12,000 users of creamery separators. Naturally it is more difficult to make a user appreciate a difference of \$50.—a year in results than difference of \$1,500—, even though the difference of \$50.—may relatively mean more to the user than the difference of \$1,500.—

Again, the users of factory or creamery sizes of separators have so much better sources of information. The use of the separator is a business with them. The results are known from day to day and year to year, and what one user accomplishes is readily comparable with the results of another. On the other hand, the great majority of users of farm and dairy sizes of separators know little of separators and cannot easily determine whether their results are as good as they should be or might be better under other circumstances. But the problem is bound to finally work out in the same way.

The DE LAVAL factory separator was invented 31 years ago and commenced to come into creamery use 28 years ago. Within a few years the original patents began to expire. 15 years ago there were a dozen makes of power cream separators on the market. Today the use of DE LAVAL factory machines exceeds 98% and is almost literally universal. It has been so for five years. No effort is longer made to sell any other make of power separator.

The DE LAVAL hand separator was invented 23 years ago and commenced to come into farm use about 20 years ago. As the earlier patents expired there were more than 30 makes of such machines on the market five years ago. Today there are less than a dozen and not more than five which have a sale worth counting at all. Each year the number decreases and their sales become fewer and more difficult.

What is true in America in this way is true in even greater degree elsewhere throughout the world. In many countries the sale of DE LAVAL machines is now almost universal. Dollars-and-cents differences in product mean more there than to American farmers. The sale of cheap "mail order" separators has not been attempted elsewhere, and would-be competing manufacturers and dealers have never been so unscrupulous in making the unjustified "claims" that so many American buyers have accepted as facts.

It makes an AVERAGE DIFFERENCE OF FIFTY DOLLARS A YEAR whether the farm user of a separator uses the DE LAVAL or some other kind. It will make that difference this year and go on making it until a DE LAVAL is used. A DE LAVAL catalogue helps to explain this and is to be had for the asking, as well as an Improved DE LAVAL machine for practical demonstrations of it to any intending separator buyer.

be established in addition, for the easy distribution of the products. This New York scheme, like the farms themselves, is founded on commercialism. The private trade will be catered to, and Lakewood's newly laid eggs and petite roasters will be sold to the man who eats them. It is an undertaking by the producer to market his products and so secure middle profits. In addition to the three stores in New York a branch will be opened in Lakewood and another in Elberon, New Jersey.

To keep the breeding establishment stocked, supply the market call for eggs and broilers and furnish stock birds, hatching eggs and baby chicks to other breeders requires great hatching and brooding capacity. And, after all, the fundamental basis of success in the poultry business resolves into incubating the eggs and brooding the chicks. The best of feed and care cannot transform poorly hatched, unnaturally brooded chicks into profit payers.

The chicks at Lakewood have long been successfully raised. Four years ago the farm was able to furnish 400 pullets to stock a plant in an adjoining town. But Lakewood reached the maximum production with their equipment. Their condition is illustrated by the condition of a laundry of which my friend, A. F. Hunter, spoke when recently I visited him at his home. As the laundry grew new pieces of machinery were installed, more help was hired and more space utilized. But the increasing business did not net proportionately the profit of earlier years. The work was growing more intricate and congested and further expansion seemed impractical. But the proprietress wished to develop the business to the extent of her opportunity. She called a manager from New York to go through her place and advise on what lines to enlarge. He said, after observation: "You must effect economy; you must minimize the labor, room and time required for your work; and, while your machinery is new and adapted for its purpose in a small establishment, you must discard it and install an equipment that will enable the rapid laundering of large quantities of work."

Lakewood, like the laundry, had "just grown," as Topsy exclaimed. Now they could increase their prices to stifle the demand, or, installing new equipment, minimize the cost of production and develop a large farm through moderate prices and many sales. Brown wanted to be big, so he became interested in a mammoth equipment to facilitate the work and reduce the cost of hatching and brooding.

After careful inquiry an order was placed with the Hall Mammoth Incubator Company, of South Columbia, N. Y., for a 15,000 egg Mammoth Incubator, to be installed at Lakewood, and 6,000 egger and four 100-foot brooding systems for Eatontown. This equipment has been given a thorough trial the past season and the results have been most satisfactory. The Mammoths were run in competition with oil heated machines, and Brown has relegated the latter as antiquated, and is now installing in addition, at Lakewood, two 16,500 egg Halls, and five 100-foot brooding systems; also at Eatontown another 6,000 egg Hall. This gives the Lakewood Farm Company a total incubator capacity of 60,000 eggs every three weeks.

said: "The results far exceeded my most sanguine expectations, and the equipment makes possible the economical production of poultry and eggs in vast quantities. I know the chicks are stronger and have more vitality. The first eight months in 1908 we burned 3,000 gallons of oil that cost us 10½ cents a gallon. This season we have burned but one ton of coal—\$5.90. A year ago two men were in our incubator cellar all the time; this season one man has done the work, and we have used him at least four hours a day on other jobs. One great advantage with the Mammoth Incubator is that it does away with the necessity of caring for a multiplicity of individual lamps. It also eliminates the noxious oil fumes. The machine is heated from a single hot water jacket heater, and this Hall heater is unrivalled for reliability and efficiency. The regulator is the acme of perfect control and it is impossible for the water to get too hot or too cold."

"Do individual incubators hold any advantage over the Mammoth, Mr. Brown?" "No, the big machines have many decided advantages; everything has been taken into consideration and worked out perfectly."

"Just the other day a poultryman in the west wrote me that we ought to organize and hold the prices for baby chicks. With the Hall machines I expect to reduce the prices, and this coming season, with our added equipment, we will be in position to go out stronger than ever for this trade."

LAYING TEST.

C. F. Townsend, president of the National Poultry Association, is conducting at his home in Weedsport, N. Y., a series of tests to show the relative value of various breeds and strains.

The first test was made during a part of the past winter and spring. Delays in the work of preparing the trial pens, sickness and death in his family, and other causes, made this a short and not wholly satisfactory one. However, some interesting facts were collected. And as these tests are absolutely impartial their value is great.

Pens containing six females and one male were used, the following being entered: One pen of U. R. Fishel's exhibition White Plymouth Rocks; two pens of L. H. Perry's White Leghorns, one being wholly of exhibition birds, the other of range stock, and one pen of the Kulp-Lewis Brown Leghorns. And the object of this test was to compare the winter and spring laying and the fertility of eggs from these Rocks and Leghorns.

The birds were placed side by side in roomy, well lighted pens, having earth floors. Ventilation was supplied by swinging windows, so that pure air was freely admitted at all times. The arrangements were such that no drafts reached the birds, and there was no sickness. The birds were put through the Schild machine occasionally, and thus were kept free from all insect pests. The usual "sharp grit, oyster shells and fresh water" were supplied as a matter of course. They were given plenty of alfalfa and medicated charcoal was freely supplied.

In feeding the fowls Mr. Townsend assumed that the actual food needed to produce an egg from a mature bird would be the same, whether the breed

**Learn About Paroid Roofing--****Read the facts, then decide**

Every year you're learning how to raise better poultry, how to increase the production of eggs. That's progressive experience.

Now, we've had a long, progressive experience in making roofing—over 25 years—much more experience than any other roofing manufacturer to-day. So we've learned a lot of things others have yet to find out.

PAROID ROOFING

We've learned how to make the PAROID felt right, because we make it in our own mills. Other manufacturers buy their felt from first one mill, then another—wherever they can get it cheapest. We have the most up-to-date felt mill in the country, equipped with special felting machinery.

We have designed our own saturating and coating machines—have our own special formula for making our waterproof compound—the result of years of experiment and test. This gives the most pliable, smoothest-surfaced, longest-lasting roofing on the market.

Proslate Roofing

is made to meet the demand for a colored roofing where architectural effect is desired. We use our regular finished PAROID as a base and add an extra weatherproof deep red colored coating by a separate process.

The ornamental edge gives the effect of stained shingles or slate.

Especially designed for residences, bungalows, club houses and fine farm buildings.

Neponset Red Rope Roofing

has been the standard low cost roofing for twenty-five years. Costs about the same as tarred felts and other cheap roofings, but lasts three or four times as long. Contains no tar, clean to handle, easy to lay.

OUR GUARANTEE is that we will replace every square foot of roofing that proves to be of defective manufacture. If a stronger guarantee than this could be made we would make it.

We also make the celebrated NEPONSET WATERPROOF BUILDING PAPER and FLORIAN SOUND DEADENING FELT for dwellings.

Free Books

To the Man Who is Going to Build. Tell us the kind of building or repairing you are planning and we will send you the right book with samples of our products and all of our building suggestions free. Write us—our advice may save you a costly mistake. Dealers everywhere sell our roofings.

was large or small; and that any excess went either into waste or fat.

Therefore, each pen received exactly the same amount of food.

We emphasize this because this test disproves the general belief that more food is required to produce a dozen eggs from the American breeds than from the so-called Mediterraneans. In passing, we would say that Mr. Townsend reports on July 5 that the Rocks were in full moult, and therefore that each demanded considerably more food than did the lighter birds.

During the test the birds were never overfed. In the morning they were given a dry mash, of the formula prepared by W. D. Cady, of Weedsport, N. Y., after warming up by scratching for a small quantity of wheat or oats—two or three handfuls being scattered in the litter in each pen. At noon a pint of mixed grain—two parts of wheat, two of oats and one of cracked corn—was thrown into the litter. At night Schumacher scratch grain was fed, and this was occasionally mixed into a slightly moistened mash with bran, middlings and a small quantity of ground beef scraps. No "egg foods" nor condiment of any sort were used.

Several facts of a rather unexpected nature were developed by this test.

Thus the Plymouth Rocks, with no more food than the Leghorns, outlayed them during the test, which ran from the middle of January to the end of April.

The White Leghorns layed fairly well during the coldest weather and produced eggs which averaged larger than the Rocks.

The Brown Leghorns proved to be very poor winter layers. In April, however, they began laying, and thereafter did exceedingly well.

The greatest surprise in the test is the fact that the White Rocks proved to be absolutely non-sitters! One of the pullets clucked for a day or two, but continued laying with no disposition to sit. There were two yearling hens in the pen, and these have layed steadily up to date.

The fertility of all the pens ran low, but the chicks that were hatched proved to be healthy, strong and very active.

The best laying pen of White Leghorns produced some heavy eggs, often weighing 30 ounces to the dozen. Some of the Browns also layed large eggs, though, as a pen, they ran smaller than either the White Leghorns or Rocks.

The average number of eggs layed monthly was as follows:

Brown Leghorns.....	70
First pen White Leghorns....	75%
Second pen White Leghorns..	91
White Rocks.....	130
Dividing by six shows that the monthly average per hen was:	

Brown Leghorns.....	11%
First pen White Leghorns....	12%
Second pen White Leghorns..	15%
White Rocks.....	21%

Allowing, say three months for the moult, and assuming that the rate of laying would be the same, the yearly average per hen would be:

Brown Leghorns.....	105
First Pen White Leghorns....	113%
Second pen White Leghorns..	136%
White Rocks.....	195

This, however, is not to be considered, as the Leghorns layed above their average during May and June.

It will be seen that the Rocks layed better during the cold days of January,

February and March than did the Leghorns. Had the test run through the year, as originally planned, it would have shown whether the Rocks could be overtaken during the remaining months.

However, the test was interesting as well as valuable, and next season it will be far better. Entirely new pens, of a modified open air class, will be built. Early hatched pullets will be used, and the test will continue for a full year. The New York market value of the eggs layed will be given, together with the cost of feeding, cost of eggs used for hatching, cost and value of chicks raised and market value of the fowls at the end of the year.

GREAT LAYERS Poor layers, cocks that will breed layers, picked unerringly by the Hogan System of selection. Tested 1½ years at California State Experiment Station. TESTIMONIALS FROM HIGHEST AUTHORITY ON EARTH

Best Catalogue Ever Published

We are in receipt of the latest edition of "DeGraff's Book on Reds." To say that this is the best, meaning appearance, printing, typographically, color work, etc., showing the Reds in as near true color as it is possible to produce on paper, it surpasses anything ever attempted by a Red breeder. Besides this nearly a hundred fine pictures from life illustrate the 32 pages of reading matter, which is full of practical information and the real merit of the book is the convincing offhand style in which it is written, as it shows beyond a doubt, the author knows what he is talking about.

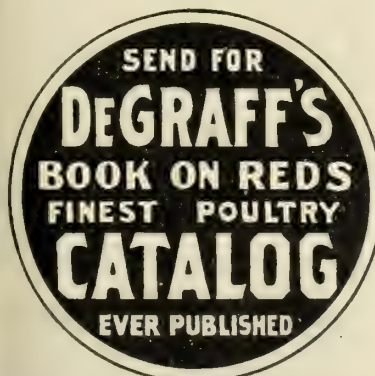

DeGraff's Color Plate Book on Reds has filled a long felt want, and it shows it is appreciated by the Red fanciers, as his issue of 5,000 copies was sold at 25 cents each before the year was out.—*Red Breeder Bulletin*.

DeGraff Poultry Farm made another of their phenomenal victories at the New York State Fair, as well as made many friends, by exhibiting one of the finest collections of Rose and Single Comb Rhode Island Reds ever brought together. They made practically a clean sweep, winning all first, second, third, fourth and fifth prizes on S. C., and tied for the best display, all varieties competing. Mr. E. T. DeGraff, proprietor of this farm, is recognized as the leading Rhode Island Red breeder of America and probably raises and sells more good birds each season than any three of his competitors. He has made a specialty of Rhode Island Reds for many years and as a result of his efforts has perfected a strain of birds that he may well be proud of. His large color plate catalogue showing some of his winning specimens in natural colors is surely a masterpiece of art and is unquestionably the finest poultry catalogue ever issued. The cover is handsomely embossed in gold letters, which is only in keeping with the valuable information and beautiful illustrations which it contains. If you have not had a copy you should write him.—*Poultry Monthly*, Syracuse.

I visited the De Graff Poultry Farm, where I inspected many hundred fine Reds, which were a surprise to me for the high average quality of both breeds. I found his 1909 breeding-pens comprised an extra fine lot of yearling hens, and large fully developed pullets, and as mated they would be hard to duplicate for good results in breeding. I saw at least 25 Red males that would average better than any string of males I have ever seen in any show-room and should make the best of breeders, as they are the same even shade of rich red all over that we are looking for.

JUDGE A. C. CHAPIN.

Springfield, Mass.

I am satisfied. I can truthfully say that I saw more good Rhode Island Reds in one bunch than I ever saw in my life, and the fact of such a large number of birds to see them all so uniform in color and so healthy makes me say that my visit to your plant was the most interesting that I ever enjoyed in my life in this business. Certainly too much cannot be said of the number of birds you have, and the quality of them, and what is more the health which every bird appeared to be in. You are certainly deserving of all that is coming to you.

THE U. S.**OFFERS THE GREATEST OPPORTUNITY**

In the world to makers of industrial or denatured
alcohol. Those who start this production now are
bound to come to great rewards. The field is practically
untouched, and by starting now you can
have things very much your own way. **THE UTIL-
IZATION OF WOOD WASTE BY DISTILLATION.**
A general consideration of the NEW INDUSTRY,
including a full description of the distilling
apparatus used and the principle involved, also methods
of chemical control and disposal of the products;
first edition illustrated by seventy-four engravings,
156 pages. This book is cloth bound; it will be sent
to any address, postpaid, on receipt of \$3.20. Every
farm, ranch and merchant needs a 5-gallon tax-
free denatured alcohol distillery apparatus; price
\$125.00. A 100-gallon distilling apparatus costs
\$700.00. May we have the pleasure of your early
reply? We are sincerely yours,

WITH EVERY ROLL
 of
CONGO
 ROOFING

THIS GUARANTEE BOND FULLY PROTECTS YOU

LOTS of manufacturers are keen to tell you what their goods are made of. They give you a beautiful word picture of a marvelous and mysterious "gum" that only they can produce. Others tell you of the real "rubber" that they use—and so on.

Regarding Congo Roofing, we have only two statements to make:

First: We believe it is the *best* ready roofing made.

Second: Because we believe that, we give a *genuine Surety Bond* with every roll, which guarantees three-ply Congo for 10 years.

These bonds are issued by the *National Surety Company* and they are as good as a government bond.

No other roofing manufacturer *dares* give such a guarantee.

You take no chances when you buy Congo.

There is no "gum" in it to make it sticky; there is no rubber in it to get brittle. It is made of the best roofing materials that it is possible for us to purchase under the best manufacturing conditions. Because it is made right, it gives such satisfactory service that we are not afraid to issue a *Guarantee Bond* to back up every statement we make.

Ask any other manufacturer for a *Real Bond* and see him squirm.

Booklet and samples of Congo free on request

Unless It Cures It Costs You Nothing

Simply send back the empty box and we will refund what you paid for it by return mail, without question or delay. That's the iron-clad guarantee we make with

Conkey's Roup Remedy

for years recognized everywhere as the one reliable remedy for this dreaded poultry disease. No poultry owner should be without it, because once roup makes its appearance it spreads very quickly through the yard, leaving death in its wake, unless checked at once.

Easy to Administer—Cures and Prevents

Simply mix a thimbleful of the Remedy in a gallon of drinking water and let the fowls have all they want. They speedily cure themselves. Your well fowls should also be given a little now and then, as this will tone up the stock and prevent disease. A 50c. box makes 25 millions of medicine.

The New 1910 Enlarged Edition of Conkey's Poultry Book

FREE

Send for your copy at once. The enormous demand is rapidly exhausting the edition. Conkey's old book was universally recognized as the most valuable volume ever issued on the proper care and handling of poultry. The distribution of over two million copies proves this. Now, however, the demands of a rapidly growing industry have made necessary this revised and greatly enlarged edition. We want to place a copy in the hands of every owner of fowls.

Facts From Men Who Know

This book does not deal in theories or opinions. It gives you facts—the result of the experience of men who have spent years in the raising, care and handling of poultry. It contains instructive articles on Housing, Feeding, Egg Production, Breeding, Care in Sickness and Health; hundreds of other things you ought to know.

It's Absolutely Free Simply send name of the man from whom you buy poultry supplies, with 4c in stamps to cover postage, and a copy will be sent at once. Do it now or you may be disappointed. [S]

PHOTOGRAPHS ON PLATES.

We wish to call our readers' attention to the advertising of the Novelty Plate Company, Department Z, Desplaines, Ill. They reproduce photos of any subject, persons, single or in groups, residences, churches, schoolhouses, animals, landscapes, etc. All plates are enameled and hardened so hot water or ordinary use will not affect the reproduced photos.

The plates are 8 inches in diameter, although larger plates will be furnished if desired. The prices are reasonable, and these plates are not only an attractive and useful article for ordinary table use but will also make splendid ornaments for the plate rail or library table.

All photographs sent to them for reproduction are returned packed in box with the plates in exactly the same condition as they came to them. Write these people, mentioning American Poultry Journal, and they will send you folder and descriptive matter, with prices. The prices quoted in their folder include the prepaying by them of express charges to your nearest express office.

The Novelty Plate Company furnish splendid references, including State Bank of Desplaines, the mayor of the town and publisher of the local newspaper, so that any orders entrusted to them will be faithfully filled.

MODERN MARINE MARVEL.

New D. & C. Steamer City of Cleveland
Now in Regular Service.

"Modern Marine Marvel," by what better phrase can you characterize a steamer that has 500 staterooms, washed air ventilation, passenger elevator, convention hall and a Venetian garden?

The new D. & C. has all these features and then some. This boat cost \$1,250,000, is 444 feet long, is seven decks high and has 5,000-horsepower engines.

Write for pamphlet containing detailed description of the new boat. Send 2-cent stamp to D. & C. Navigation Company, Passenger Department, Detroit, Mich.

Can you advise me what material would make pretty yet inexpensive dresses for a young school teacher? I was just graduated from normal school last spring and have a position in the country where I want to make as good an impression as possible.

Carrie Lotta Stiles.
Your desire will undoubtedly be gratified if you secure a certain cotton goods known as Simpson-Eddystone Prints, made by the Eddystone Manufacturing Company, Philadelphia. These goods come in a variety of pretty patterns and the material is exceptionally good quality. One of the most important considerations is that the colors are absolutely fast, so that they make very practical tub-dresses.

They are really very moderate in cost, yet they can be made up into as stylish gowns as costly materials. Among the colors that would undoubtedly be most suitable for you are the fast hazel browns, indigo blues and black and whites. They may be had at any reliable dry goods dealer's.

Johnstown, Pa., March 13, 1909.
Chicago House Wrecking Co., Chicago, Ill.

Gentlemen: We take pleasure in writing you, as we have just unloaded the two cars of lumber and building material, doors, windows, hardware, etc., and we unhesitatingly say we are well pleased and your lumber is O. K., and we certainly intend to give you more orders in the near future.

You will accept our thanks for the promptness as well as the careful manner in which the material was packed; not a glass broken. We take pleasure in recommending you to our friends and those intending to build or purchase anything in your line.

(Signed) Frank McClear.

W. R. Graves, Southboro, Mass., the well known breeder of White Wyandottes and White Plymouth Rocks, reports that he has a fine lot of young stock in both varieties for the fall and winter trade, and is going to be in a better position than ever before to supply his customers with prize winners and choice breeding birds. If you are looking for something choice in either of these varieties better write Mr. Graves now and state what you desire. Mr. Graves satisfies his customers.

Simon Beuth, German Valley, Ill., the noted breeder of Buff Wyandottes, reports that he has an exceptionally fine lot of youngsters, many of which will be heard

from at the leading shows the coming season. He is also offering a number of his old breeders for sale at prices that will move them quick. This stock is too well known to need any further recommendation from us. Write him at once for special prices and a copy of his handsome catalog. Mention American Poultry Journal.

Haussmann & Dunn Company, Chicago, Ill., the pioneer dealers in veterinary instruments, have an announcement in our columns which interests every owner of live stock and poultry. They supply up-to-date instruments which every stockman is in need of. Their complete illustrated free catalogue gives full particulars.

A. W. Blanchard, of Beloit, Wis., breeder of R. C. Reds, calls attention in his ad this month to some fine youngsters that he has to spare at reasonable prices. Mr. Blanchard has taken a goodly number of prizes at Rockford, Chicago, Delavan and elsewhere. Write him if you want R. C. Reds.

Charles Nixon, Washington, N. J., the White Wyandotte man, has a change of ad this month. Better read it, as it may interest you. Remember, he knows how to produce birds that win at Madison Square Garden.

**CAPONIZING INSTRUMENTS**

Milk Fever Outfits, Dehorners, Impregnators, Teat Syphons, Forceps, etc. Received the only award at both World's Fairs—St. Louis, '04; Chicago, '93. Illustrated cat. free. **Haussmann & Dunn Co., 392 S. Clark, Chicago**

Railroad Lands**Very Cheap****FREE TRANSPORTATION**

To quickly build up population along the Washington and Choctaw Railroad in new reservation just thrown open, I will sell a little of our 100,000 acres of \$25 and \$50 lands for \$17.50 per acre.

Magnificent opportunity for settlers, investors and speculators. Easy terms, as low as \$1.00 per month. Any size tract from 10 acres up. Gulf Coast lands the most productive in the world—ten acres will yield an income of \$5,000 a year. Sweet, pure water, cool pleasant summers and mild, balmy winters; beautiful lands, adapted to farming, truck and fruit growing, or live stock, poultry, bees and dairying; no swamp, no stones, irrigation not needed; only part of the United States absolutely free from local diseases. Sixty miles from the Coast; 21 hours from St. Louis; 29 hours from Chicago; with best shipping facilities. Don't buy land anywhere until you investigate this. Send me your name, a postal card will do, and I will send you complete details, also a railroad pass free whether you buy or not.

M. G. WINEGAR, General Manager
6136 Times Bldg., St. Louis, Mo.

Special terms to live land agents capable of buying two sections or more for spot cash

ALTON GRANTS STOP-OVER AT SPRINGFIELD.

On account of the convenient arrangement of the schedules of its through trains, which permit passengers to stop off while en route between Chicago and St. Louis, in either direction and lose only a few hours, the Chicago & Alton railroad has found out that their business to Springfield has increased to such an extent that a stop-over at that point should be granted. Therefore on and after August 10 holders of first-class single, round trip and tourist tickets will be permitted to stop at the state capital for ten days without any extra charge and without any formality of arranging stop-over other than request on conductor and by depositing their ticket with ticket agent, Springfield, upon arrival. By leaving Chicago or St. Louis (as the case may be) in the morning the passenger reaches Springfield at dinner time, has about two or three hours for sightseeing (the program including a visit to Lincoln's tomb and old home, the State Capitol and new Supreme Court building) and returning to the depot catches the train which lands him at his destination—Chicago or St. Louis—the same day. The Alton has issued pamphlets on the historical interest which Springfield holds for the visitor, and copies of these pamphlets may be obtained upon application to George J. Charlton, general passenger agent, Chicago, Ill.

FARMERS TO DO DISTILLERS' WORK.

Can Make Alcohol From Waste Crops by New Invention.

The perfection of a process for the distillation of denatured alcohol by Carl V. Hartzvelt, a Cleveland, in the past week, may result in dealing the so-called "whisky trust" a severe blow.

Yesterday Hartzvelt shipped the first of a large number of orders he has received for small stills with which even a farmer can make use of the decayed portions of his crops. Alcohol can be made at a maximum expense of 8 cents a gallon.

During the past month United States Revenue Officers Harper and Stewart have watched the working of a real still, of the "moonshine" variety, famed in Kentucky, with which Hartzvelt has been experimenting day and night at No. 1287 Ontario street. Specimens of the fluid obtained by Hartzvelt were sealed and a barrel of the product put under lock and key, the purpose being to submit the alcohol to the government test. The government has appropriated \$10,000 for research in this work. The still used by Hartzvelt is the only one of its kind that has ever been used on this side of the Ohio river and has attracted distillers from all over the country. Paul A. De Leon, No. 1209 East Bay street, Charlestown, S. C., a well known southerner, after watching the process and still for several days, left for home yesterday with the first completed still.

Heat, power and light generated by denatured alcohol, according to Hartzvelt, bring the best results.

"It would pay many," says Hartzvelt, "to make alcohol for home consumption. Potatoes, sawdust, grain and corn in decayed form could be utilized for the purpose. For illuminating and machine power it is unexcelled. As a generator of motive power for autos it equals gasoline, and adding 10 per cent denatured alcohol to gasoline would create 50 per cent stronger motive power."

Cincinnati, Aug. 14, 1909.

Editor American Poultry Journal:

The following copy from Mr. Frank Sissons, England, addressed to Mr. Milton W. Brown, Station L, Cincinnati, Ohio, may be of interest to your readers.

I made three importations from Mr. Sissons and find the birds splendid in shape, size and color. The only criticism I have is the extreme weight of coops, which seems wholly unnecessary, the average express bill amounting to \$10 per bird. Americans would ship in lighter coops and save three-fourths the expense.

The letter is as follows:

"I have this day dispatched to you, per Liverpool, to be shipped by the American Express Company, steamship Georgic, the following:

"(1) Buff Orpington cock.

"(2) Buff Orpington cockerel.

"(3) Six 1907 hens, including what I believe to be the best two Buff Orpington hens in existence. One is the bird depicted in a copy of Poultry I posted to you. These two birds won 1st Birmingham, 1st and 2nd Belfast, 1st and cup Relford, 1st and 2nd Newark, 1st Northallerton, 1st Ashover, 1st Harthill and many other prizes. These two birds are quite exceptional, although the whole pen is my best pen. I have got all the eggs I want from them. I weighed one of the hens this morning and she weighs just over 12 pounds. As regards the others, they are all winners at the biggest shows and are almost as good. I may say that I have consigned them as of the value of \$1,500.

"The cock is absolutely vigorous and is an almost perfect specimen of Buff Orpington.

"Let me hear from you in due course."

Milton W. Brown.

James Crawford, of Cameron Mills, N. Y., has enjoyed the most successful season of his career of several years past as a breeder of R. C. B. Leghorns. His female line shows exceptional merit and a marked improvement over former years. The same may also be said of his males. He has succeeded in obtaining the shade of brown so much desired by breeders of this breed, and a remarkable freedom from shafting. Mr. Crawford will have 400 or 500 youngsters to sell; many of them will be qualified to win in fast company. Mr. Crawford is junior member of the firm of Crawford Bros., merchants, an old established firm who are rated high in the financial world, and in doing business with him you are assured of only fair and honorable treatment.

T. A. Faulds, London, Ont., Canada, the noted breeder of Rose and Single Comb Black Minorcas, is advertising all his stock, including his many prize-winners, for sale. This is necessary on account of poor health. Mr. Faulds has built up a magnificent strain of birds and has won a great many prizes at the leading shows in both Canada and the United States during the past few years, but he is now compelled to dispose of his stock and those who are fortunate enough to secure some of this stock will be getting the very cream in Minorcas.

CLASSIFIED ADS

UNDER this heading ads will be inserted for six cents per word each month for less than three months, and four cents per word each insertion for three months or longer. Changes in copy allowed every three months. Numbers and initials count as words. All ads will be inserted under classified headings. No ads accepted at less than an average of fifty cents per insertion. Terms, cash with each ad. Count the words carefully to avoid delay in publishing. Write your copy plainly, as upon this the correctness of your ad largely depends. When placing your ads remember that advertisers of Classified Ads get better returns from AMERICAN POULTRY JOURNAL than from any other poultry journal—none excepted. On writing any of these advertisers mention A. P. J.

ALL COPY FOR CLASSIFIED ADS MUST REACH US BY THE 19TH OF THE MONTH PRECEDING DATE OF ISSUE

"Ringlet" First Prize Exhibition Pen and Winners of Sweepstakes Silver Cup at Madison Square Garden, New York, 1909

For more than twenty years at New York my "Ringlet" victories have been complete. Exhibited by me personally they have won a grand total of 127 prizes, 69 of these being firsts and specials, being more first and special prizes than won by any competitor in the history of the show. These include the \$100 Champion Challenge Trophy, won three times; the \$100 Association Cup, won three times; the \$100 Sweepstakes Cup offered by the President for best Plymouth Rock cock, cockerel, hen and pullet, any variety.

The "Ringlet" world's record at New York four years in succession is a page of history. The "Ringlet" record of first on exhibition pen three years in succession is the undisputed Champion. My Clean Sweep of FIRST, SECOND, THIRD, FOURTH AND FIFTH PRIZES on pullets has never been approached in Madison Square Garden, and stands alone and unequalled.

One thousand grand breeding cockerels for sale; elegant hens and pullets in any number. Show birds fit to win in any competition. Richly illustrated 50-page catalogue upon request; it is full of original pictures of New York winners from life. EGGS from the world's finest exhibition matings, one setting \$6; two settings \$11; three settings \$15; four settings \$18. Address

E. B. THOMPSON

Lock Box 510, AMENIA, N. Y.

"RINGLETS" STAND ALONE, VICTORS OF THE FIELD . . .

At America's Imperial Show, Madison Square Garden, New York, Winters of 1908-1909 . .

E. B. THOMPSON'S BARRED P. ROCKS

As usual win the leading prizes and achieve the highest honors that can come to any breed. First prize on cockerel, first prize on cock, the Great National Silver Cup presented by the American Plymouth Rock Club for best cock, cockerel, hen and pullet. Double the number first prizes of any competitor. Special for best shaped male, special for best headed male, special on hen, special on pullet, the Sweepstakes Special in Gold for best Plymouth Rock on exhibition of either sex and any variety. The Imperial prize of the show, special for champion male.

At the 1909 New York Show my 1st Prize Sweepstakes Cup Exhibition Pen was Declared by Expert Opinion to be the Finest Ever Exhibited. A Paragon of Perfection. The Sun Never Before Shone on Such a Masterful Exhibit.

SHEPPARD'S FAMOUS ANCONAS

THE
WORLD'S
BEST

Special Sale

I have placed 90 splendid cockerels worth \$3 each, 8 worth \$5 each and 2 at \$10 each in a pen. To make room for winter quarters, I will sell these 100 choice breeders at \$2 each; selection to be made by disinterested party by drawing card with number, which corresponds with number of cockerel. These birds are sired by 1st and 2d prize cockerels at Madison Square. This will give you a chance to build up your stock by introducing high quality blood strain at a very low cost. My birds have won first at the world's leading shows, including Dairy Show, London, Eng., Madison Square Garden and Cleveland. Since I have entered the race at Madison Square my birds have won more 1st and 2d prizes than all the Ancona breeders in the country combined. In 1907 they showed their superiority by winning all the 1st and 2d prizes. Send \$2 at once and secure a choice breeder, with a chance of getting a high-grade exhibition bird. R. or S. C. Circular free.

H. Cecil Sheppard : IMPORTER EXPORTER BREEDER : Box M, Berea, Ohio
President International Ancona Club

Buff Wyandottes

We can furnish single birds, trios or pens of any number. Write for particulars. If you want to start a strain of heavy winter layers you can put faith in these birds.

Fifteen Hundred Young Cockerels

for delivery after September 1st. Every one a carefully selected bird and shipped on approval. Price \$5. Only one grade—the best. The best lot of utility breeders in this country. It pays to buy male birds from a strain of known quality.

Hatching Eggs

We shall keep ten of our best pens mated through the year to supply eggs for those doing fall hatching. Price, \$1.50 per 13, \$4.50 per 50, \$7 per 100. Eggs shipped on day laid; results guaranteed.

Pittsfield Exhibition Barred Rocks

Cockerels and Pullets: We have an unusually fine lot of early hatched birds for fall and early winter shows. Birds that are of up-to-date show quality and sure to win. We make a special business of mating up exhibition pens for our customers.

Cocks and Hens: We also have a few choice exhibition cocks and about 100 hens of the same quality that we will sell at very low prices. The lot includes some of our best winners last season.

Prices of Exhibition Birds quoted on application. If you want to win or want a good breeder it will pay you to write us. Illustrated catalogue free.

BROOKDALE FARM

White Orpingtons with Color and Type

Hundreds of grand breeders, this season's hatch, together with a few select yearling and two-year-old hens from our pens.

The champion cock bird Century, together with one of his sons, sired nearly every young bird I have on the place, and it will be good policy on your part to secure a cockerel from either one or the other of these famous sires. Write for October special prices.

Special: If in need of Mammoth Toulouse Geese write quick, as we offer our entire flock at your price. Collie dogs.

W. E. Stanfield - Brookdale Farm - Hillsdale, Mich.

Diseases of Poultry

—BY—

D. E. SALMON, D. V. M.

Chief of the United States Bureau of Animal Industry

Every poultryman should have this book in their poultry library. It contains 250 pages, and every disease to which fowls are subject is treated in a most thorough manner. The cause, symptoms and cure of each disease is put before the reader in such a manner as to be understood at a glance.

With this book in hand you can be your own poultry doctor. Better order one now and not wait until your fowls become ill.

THE PRICE IS ONLY FIFTY CENTS

Will send this book and American Poultry Journal one year for only 75 cents. Send all orders to

American Poultry Journal Pub. Co.

Our Greatest Merchandise Sale!

Of all our Wonderful Sales of the past none approaches the one we are advertising today. We propose to give the great buying public the benefit of our wonderful operations. No other concern on earth can meet the prices we place

CHICAGO HOUSE WRECKING CO.

on our goods. We are offering the most staple merchandise at prices which in most instances do not represent the original cost of manufacture. If you fail to take advantage of this offer you are certainly overlooking an opportunity which may never again occur.

Sheriffs', Receivers' & Manufacturers' Sales!

Our WONDERFUL CATALOG

We have published a BRAND NEW CATALOG, different than any other previously issued by us. It is twice as big; it gives the history of our business and tells all about our WONDERFUL OPERATIONS; contains over 50,000 BARGAIN OFFERS in every line. Gives illustrations true to the articles described. It contains 16 pages in natural color reproductions showing all articles true to life in every detail. It describes more fully, the various articles offered in this advertisement. It is a book such as every BARGAIN SEEKING MAN OR WOMAN must have in his or her possession. If you fail to secure a copy you will make a mistake. It is FREE if you'll follow directions in this advertisement.

How to Answer This Advertisement

The best way to answer this advertisement is to FILL OUT THE COUPON in the lower left hand corner. Tear the page out and place a cross mark on such articles as interest you most. We will then MAIL YOU OUR LITERATURE pertaining to the articles in question, as well as send you a copy of our MAMMOTH CATALOG; In addition we will describe more fully such articles as most interest you. If, however, you do not wish to mutilate this page, write us on a POST CARD, telling us WHERE YOU HAVE SEEN THIS ADVERTISEMENT, and just what articles interest you most. If your wants be in a general way only, then merely fill out the coupon in the lower left-hand corner, and we will MAIL YOU OUR GENERAL CATALOG.

Furniture Over \$300,000.00 of high-grade, brand new furniture, carpets, rugs and linoleum; everything needed to furnish your home complete. No shoddy furniture in our stock. It is the best that can be manufactured. It is built for the taste of people who know real quality. Our goods are bought at Sheriff's, Receivers' and Manufacturers' Sales. That gives us a big advantage over any possible competition and the public gets the benefit of our buying operations. Write for price on any article you may require. Our general catalog shows all our wonderful furniture stock. When in Chicago visit our monster furniture sales rooms, the largest in America.

Steel Roofing

Over 100,000 sqs. of New Steel Roofing, which we are selling at the following prices: Flat \$1.60, Corrugated, V or Pimped \$1.75. Standing Seam \$1.85. At these prices we Prepay the Freight to all points east of Colorado except Oklahoma and Texas. Quotations to these points on application. Our high grade Galvanized Rust Proof Roofing at prices ranging from \$2.00 per square up. Write today for Free Sample.

OUR BINDING GUARANTEE

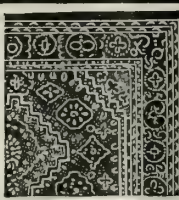

We GUARANTEE that every article you purchase from us will be EXACTLY AS REPRESENTED in every way. If you secure any merchandise from us not exactly as represented, we'll TAKE IT BACK at our FREIGHT EXPENSE and REFUND YOUR MONEY in full. We will in every instance "MAKE GOOD." We know full well the value of a SATISFIED CUSTOMER, and we will try our utmost to PLEASE YOU. We number over 100,000 customers who are regularly sending us their orders for general supplies, and we earnestly solicit just an opportunity to prove the virtue of our business for your INDIVIDUAL PURPOSE.

In every line of SUPPLIES and MERCHANDISE we can SAVE YOU MONEY, and BACKED BY OUR BINDING GUARANTEE you cannot "GO WRONG." Our CAPITAL STOCK and SURPLUS is over \$1,000,000.00. We refer you to any bank or banker anywhere; to any express company; to the mercantile agencies; to the publisher of this or any other periodical; or, you can write direct to our Depository, THE DROVERS' DEPOSIT NATIONAL BANK, UNION STOCK YARDS, CHICAGO.

We will ship ANY ARTICLE shown in this advertisement C. O. D., with PRIVILEGE OF EXAMINATION, provided you send us a deposit of 55% on account as evidence of good faith, the balance after material reaches destination and you have had an opportunity to examine and see that you have secured the articles that you have ordered. If the goods are not what you expected WE WILL REFUND your purchase price, bringing goods back to Chicago at OUR EXPENSE. You are SAFE at all times in dealing with us. We would advise that you send us an order at once selected from this advertisement.

Blanchard's White Leghorns

are no experiment, having been carefully selected and bred for over twenty years. No labor or expense has been spared in building up and perfecting this strain, and while the production of large, pure white, fancy market eggs has been the main object, **standard qualities have not been neglected.** They are large, vigorous, active and handsome. Good winter layers and keep at it all summer. Unexcelled as foundation stock or for introducing new blood. Stock for sale, both old and young. Illustrated circular free.

WINNERS AT MADISON SQUARE GARDEN, N. Y., 1903-1904-1905-1906-1907

A. M. SHAW

SUCCESSOR TO H. J. BLANCHARD

Box 997, GROTON, N. Y.

NEW STANDARD OF ORPINGTONS

is now on the market and I have hundreds of fine large cockerels and pullets that are wonders in shape and color, and all breed sons and grandsons of the famous Duke of Kent. Therefore, if you are looking for exhibition birds, select breeders or utility stock, do not forget that the Duke of Kent Strain of S. C. Black Orpingtons have qualities that no other strain can give you.

Col. D. N. Foster, Vice-President American Orpington Club, R. R. 7, Fort Wayne, Indiana

FOUR BOB-TAILS

PERHAPS you haven't any bob-tails like these in your flock, but you probably have some hens which are in the same condition. Some of them are laying and some are not. If you **KILL** or **SELL** the layers you are losing good egg money; if you **KEEP** the non-layers or drones, you pay out good money for feed and get nothing back. Why not make money on the entire flock by picking out the layers from the non-layers and keep only laying hens

—the egg-producers and money-makers for you? It's easy to do this: when you know the **POTTER SYSTEM** of selecting laying and non-laying hens and egg-production.

Now is the time to take time by the forelock and use the Potter System on your flock so that you can have only laying hens, the kind that pay for their keep and keep your egg-basket full of that shell fruit which brings in the dollars when prices are high.

Winter Layers Are the Good Payers

and we didn't need to tell you that either, but we just did want to impress you a little more that there is a right and profitable way of keeping a flock of hens, and that is by using a system of selection so that you can pick out the layers and get rid of the drones. Our large 100-page book, entitled

"Don't Kill the Laying Hen"

Hens, full of eggs like this one, are the kind that keep your egg-basket full. Why not use the Potter System and keep only laying hens in your flock?

is the greatest book ever published on the subject of laying and non-laying hens and egg-production. It tells all about the **POTTER SYSTEM** and is worth dollars to any poultry man, whether he keeps a dozen or 1,000 hens. A few of the subjects treated are given below and if you know these secrets you have the key to successful poultry keeping:

Our Book Tells You

- 1st—How to avoid killing the hen that is laying.
- 2d—How to pick out the hen that is not laying.
- 3d—To know about how far advanced the hen is toward the laying point.
- 4th—How to avoid wintering hens that are not likely to be good winter layers.
- 5th—To know how to select the hen having strong laying powers for breeding purposes.
- 6th—How to know the hen that has entirely lost her power of egg production.
- 7th—To know how to sort out the hens in summer or fall that have ceased laying for the year.
- 8th—How to know the hen that has become weakened in her laying powers.
- 9th—To know how to buy hens in the early winter that will make good winter layers, and dispose of them at a large profit after receiving their crop of eggs.
- 10th—How a very close estimate of the number of eggs the hen lays in a week or month may be made without the use of trap nests.
- 11th—How overfeeding before egg development has started tends to reduce the egg production.
- 12th—How, When and Why the laying hen should be educated.
- 13th—How to arouse and stimulate the laying organs of the hen.
- 14th—How to know the pullets that will make, and are, strong layers.
- 15th—Roup, and how it affects the laying organs of the hen.

Circulars Telling All

about our wonderful book on the Potter System will be sent with our other catalogs and you should not wait a day if you want to keep a flock of egg-laying, money-making hens **THIS WINTER**. We send all our catalogs and circulars for two red stamps to cover postage.

Next Month

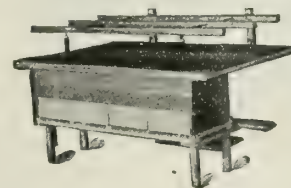

we will tell you more about the four bob-tails and if you write us now we will send the new printed matter to you just as soon as it is ready.

Potter Poultry Products are for particular poultry people. Are you particular? Then better send at once for our large catalogs and circulars, sending two red stamps to cover postage.

T. F. Potter & Co. Box A Downers Grove, Ill.

Don't Build

No, don't even think of planning to build or fix up your poultry house in any way until you get our large 100-page catalog (over 100 illustrations), telling all about **POTTER SANITARY POULTRY HOUSE FIXTURES**, Potter Vermin-Proof Roosts, Perfection Feed Hoppers, Simplex Trap Nests, W. P. Attachments, feeds and supplies of all kinds. Potter Henery Fixtures have been on the market over eight years and are used by thousands of poultry keepers. They are complete, convenient and sanitary. This cut shows but one of three styles and twelve different sizes which we make; so we can fix up your hen house, no matter how it is arranged. Do not fail to send for our large illustrated catalog telling all about our goods.

A \$40.00 House

Below is shown a Potter Portable Sanitary Poultry House, 8x10 feet in size, completely equipped with two Potter Henery Outfits, six nests, etc., two pens, room for 15 to 18 hens in each. It is complete, convenient, sanitary, neat and attractive. If in need of a house of this style and size, can you beat it for \$40.00? The house shown here is but one of a dozen different styles and sizes which we make. We recently bought out the business of the Sanitary House Co. of Lemont, Illinois, and now manufacture the complete line of Portable (K. D.) Poultry Houses, Brood Coops, Pigeon Lofts, etc., formerly made by them. If you want a complete, up-to-date and cheap house we can supply it. Large catalog fully describing these houses will be sent with our other catalog.

Eggless hens, like this one, the kind that don't lay eggs and don't keep your egg-basket full, but keep your pocket empty buying high-priced food. Use the Potter System and get rid of these drones and barren hens.

Almendinger's R. C. Buff Leghorns

Won 1st cock, 1st, 2d and 4th cockerels in the male line at the Buffalo show. Also won 1st pen. Show birds fit to win in any competition. Breeding birds at honest prices. Cat. A. F. Almendinger, Box N, Buffalo, N. Y.

Booklet Free : : C. E. Vass, Washington, New Jersey

Wyckoff's S. C. White Leghorns

Acknowledged everywhere the World's Greatest Laying Strain. Unequalled in standard qualities. Remember that we are the originators, and for more than 30 years specialty breeders of the justly celebrated Wyckoff Strain of S. C. W. Leghorns, the most profitable strain of poultry in America today. Place your orders at headquarters and make no mistake. 2,000 choice yearling hens, fine strong early cockerels and a few yearling cocks; must be sold at once to make room, and prices will be made especially attractive to early buyers. Send for catalogue and state wants as near as possible. Address

WYCKOFF'S FARM - AURORA, Cayuga Co., N. Y.

Canada's Best R. & S. C. B. Minorcas

Every bird in our yards for sale. The highest price is \$50.00 and the lowest \$3.00. During the month of August past we sold over \$500.00 worth of birds and did not have one dissatisfied customer. This is a record of which we are justly proud, but it is easily accomplished when the quality of the stock is right. We made a great win at the Canadian National Exhibition, Toronto, Canada's greatest Fall shows, last month. We won on Single Comb Cock 2d and 5th; hen 1st and 3d; cockerel 1st, 3d and 4th; pullet 1st, 2d, 3rd and 4th. R. C. cock, 3d; hen, 2d and 3d; cockerel, 3d; pullet, 1st. All our old stock was in full moult.

T. A. FAULDS - LONDON, ONTARIO, CANADA

KNAPP'S WHITE : : : WIN WYANDOTTES

At the largest 1909 Fall Show, seven of the nine birds entered at the Ohio State Fair are winners. My 1st and 2d pullets and breeding pens were the most admired birds in the show. 100 fine cockerels for quick sale at \$2, \$3 and \$5.

No more pullets to spare : : Herbert H. Knapp, Tiro, Ohio
Prompt attention to correspondence

ORPINGTONS

I expect to be in better shape than ever next spring to supply the trade with eggs for hatching from the best S. C. Buff Orpingtons in the country. A few choice breeders, male and female, still on hand, which I will sell at reasonable prices.

Roseland Poultry Farm, Chas. W. Switzer, Owner-Mgr., South Euclid, Ohio

American Standard of Perfection**LATEST EDITION**

No poultryman can breed fowls intelligently without this book. It tells you what the different varieties of fowls must be to conform to the regulations of the American Poultry Association. This book is the guide by which all poultry judging is done.

It contains ideal drawings of the different varieties of fowls, gives the Standard weights, colors, markings, etc. In fact, is the poultryman's encyclopedia.

Order one today and learn to your own satisfaction if your fowls are up to Standard requirements.

THE PHILO SYSTEM

IS ESPECIALLY VALUABLE TO THE FARMER AS WELL AS THE CITY OR VILLAGE FANCIER AND IS ADAPTED TO ALL CLIMATES, ALL THE BREEDS AND PEOPLE

The Philo System is Unlike all other Ways of Keeping Poultry

and in many respects it is just the reverse, accomplishing things in poultry work that have always been considered impossible and getting unheard of results that are hard to believe without seeing. However, the facts remain the same and we can prove to you every word of the above statement.

The New System Covers All Branches of the Work Necessary for Success

From selecting the breeders to marketing the product. It tells how to get eggs that will hatch, how to hatch nearly every egg, and how to raise nearly all the chicks hatched. It gives complete plans in detail how to make everything necessary to run the business and at less than half the cost required to handle the poultry business in any other manner. There is nothing complicated about the work and any man, woman or child that can handle a saw and hammer can do the work.

Two Pound Broilers in Eight Weeks

are raised in a space of less than a square foot to the broiler without any loss and the broilers are of the very best quality, bringing, here, three cents per pound above the highest market price.

Our Six-Month-Old Pullets Are Laying at the Rate of 24 Eggs Each Per Month

in a space of two square feet for each bird. No green cut bone or meat of any description is fed, and the food is inexpensive as compared with food others are using.

Our new book, THE PHILO SYSTEM OF PROGRESSIVE POULTRY KEEPING, gives full particulars regarding these wonderful discoveries, with simple, easy-to-understand directions that are right to the point, and fifteen pages of illustrations showing all branches of the work from start to finish. It also tells how to make a brooder for twenty-five cents that will automatically keep all lice off the chickens or kill any that may be on them when in the brooders.

Our New Brooder Saves Two Cents on Each Chicken

No lamp is required. No danger of chilling, overheating or burning up the chickens with the brooders using lamps or any kind of fire. They also keep all lice off the chickens automatically, or kill any that may be on them when placed in the brooder. Our book gives full plans and the right to make and use them. One can be easily made in an hour at a cost of from 25 to 50 cents.

A Few Testimonials

Valley Falls, N. Y., Sept. 5, 1907.

It was my privilege to spend a week in Elmira during August, during which time I saw the practical working of the Philo System of Keeping Poultry and was surprised at the result accomplished in a small corner of a city yard. Seeing is believing, they say, and if I had not seen, it would have been hard to believe that such results could have followed so small an outlay of space, time and money.

(Rev.) W. W. COX.

October 22, 1908.

P. S.—A year's observation, and some experience of my own, confirm me in what I wrote Sept. 5, 1907. The System has been

tried so long and by so many, that there can be no doubt as to its worth and adaptability. It is especially valuable to parties having but a small place for chickens; seven feet square is plenty for a flock of seven.

(Rev.) W. W. COX.

Dear Sir:—Last spring we purchased your book entitled the "Philo System," and used your heatless brooders last spring and summer. The same has been a great help to us in raising the chick in the health and mortality, the chicks being stronger and healthier than those raised in the brooders with supplied heat. We believe this brooder is the best thing out yet for raising chicks successfully. We put 25,000 chicks through your heatless brooders this last season and expect to use it more completely this coming season. We have had some of the most noted poultrymen from all over the U. S. here, also a large amount of visitors who came daily to our plant, and without any exception they pronounce our stock the finest and healthiest they have seen anywhere this year.

Respectfully yours,

W. R. CURTISS & COMPANY.

Are They Worth Saving?

Don't Let the Chicks Die in the Shell

One of our secrets of success is to save all the chickens that are fully developed at hatching time, whether they can crack the shell or not. It is a simple trick, and believed to be the secret of the Ancient Egyptians and Chinese which enabled them to sell the chicks at 10 cents a dozen. It takes but a minute to save a chick and no skill required.

Note What Others Say of This "Trick of the Trade"

Ringwood, Ont., Can., May 6, 1908.

Dear Sir:—Some time ago I got the Philo System and must say it is the best book I ever read on Poultry. I have tried the "Trick of the Trade" and saved twenty-two chickens which otherwise would have died.

Yours truly,

ROY MOYER.
Bethlehem, Pa., April 25, 1908.

Dear Sir:—Your book safely to hand, and have derived great benefit from it, especially "A Trick of the Trade."

Respectfully yours,

G. H. STANFORTH,
Potomac, Ill., May, 1908.

Dear Sir:—I am using your System of Progressive Poultry Keeping and consider it the best work on Poultry Raising I ever read. In my last hatch I saved twenty-three chickens by following the article, "A Trick of the Trade."

Yours truly,

FRED JANISON.

The Peerless "Ringlets"

True to Their Tradition, Are Again Great Winners at New York

AT THE IMPERIAL MADISON SQUARE
GARDEN SHOW, 1909,

E. B. Thompson's Barred Plymouth Rocks

win First, Third and Special Prizes on Exhibition Pens; special prize Cock; special prize Cockerel; numerous specials on hens and pullets, and the Harding \$50 Challenge Silver Cup offered for best exhibition pen. The race at this 1909 New York Show was a Marathon for speed and quality, and my First Prize Silver Cup Exhibition Pen was declared by expert opinion to be the finest ever exhibited—a paragon of perfection—and created a sensation as the finished achievement in modern Barred Rock breeding.

The "Ringlets" are always imitated—but never equalled. They are first in record, first in quality and first in popularity

*Their record at New York for 22 years is **GOLD LINED**—it is a calendar of successive victories demonstrating step by step their irresistible advance towards the world's absolute leadership*

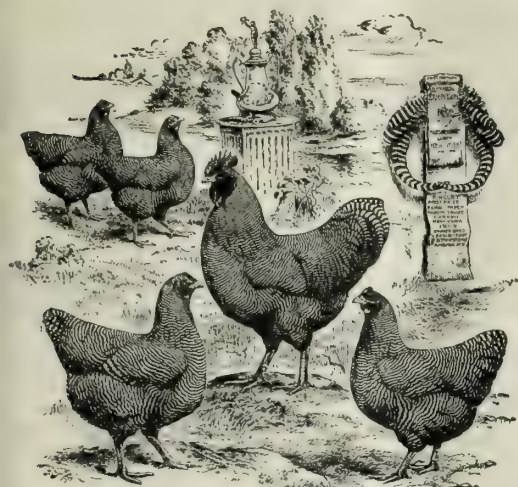

The Enormous Prestige of the "Ringlets" Created by Superlative Quality Has Made Them the Standard by Which All Other Barred Rocks are Judged

I now have on my farm the largest and finest lot of superior exhibition and breeding birds I ever owned; they show the "Ringlet" barring and the sharp contrasting colors that win under all judges

Richly illustrated 58-page catalogue mailed upon request; it is full of original pictures of New York winners from life. 1000 grand breeding and exhibition cockerels for sale. Elegant hens and pullets in any number. Show birds fit to win in any competition. You may have the product of my skill, reaped by 30 years' experience, at reasonable prices. Your wants will have my very best and personal attention.

Make Money Growing Fruit

The scientific growing of fruit offers today the finest opening in the entire line of farming operations to one who wants to get ahead in the world financially, and at the same time build a home and have surroundings which will make life worth the living. The growing of fruit has now become a science and success will surely crown the efforts of one who enters this field, makes a careful study of the industry and follows teachings of many growers who make big money on fruits.

THE FRUIT-GROWER ST. JOSEPH, MISSOURI

is the leading magazine devoted to horticulture. It contains monthly as high as eighty pages of up-to-date illustrated matter, which places its readers in position to earn maximum profits on fruit. In some sections orchard land owned by Fruit-Grower readers is sold as high as \$4,000.00 per acre, and in many sections it is being sold at one thousand to two thousand dollars per acre. In no other branch of farming can land values be made so high. The lands mentioned above are worth the money, as they pay interest on the amount.

FREE LAND INFORMATION

Among the many departments in the interest of our readers is "The Fruit-Grower Land and Colony Department." It is our aim to give complete, authentic information in regard to lands in any section of the country where our readers may contemplate purchasing. This advice will be worth thousands of dollars to anyone who figures on buying land for investment or for a home. The editor of The Fruit-Grower has personally inspected many fruit-growing sections, and we are in position through our subscribers to secure reliable data regarding any section on the continent.

For several years we have been trying to secure a fine tract of land to be colonized by members of The Fruit-Grower Family. Numerous tracts have been offered us, but after sending experts to examine each in regard to soil, climatic conditions, etc., they did not come up to our standard of excellence. We will not use anything but the very best possible location for this colony, and we hope to secure the proper one in a short time. If you are interested in purchasing land either for a home or for investment, fill out blanks below and send in with our special trial coupon.

\$5.50 Value For Only \$1.25

The Secret of Successful Poultry Raising Found at Last

EDGAR BRIGGS

It is now possible to have a sure cash income and PROFIT OF \$3,500.00 from 1,000 HENS IN FIVE MONTHS, at a minimum cost for help, feed and other necessities, making a profit of more than \$7.00 per hen per year. It is a demonstrated success. This has been easily done and YOU can do it. ALL POULTRY LOSSES are STOPPED and PROFITS ASSURED by this wonderful and revolutionary system of Poultry Culture.

READ WHAT THE BRIGGS SYSTEM WILL DO FOR YOU

The Briggs System can be applied to any poultry plant large or small with equal success. Equally as valuable to the beginner as to the experienced poultry raiser. It contains poultry secrets never before published.

SUCCESS WITH POULTRY ABSOLUTELY GUARANTEED BY THE USE OF BRIGGS' SYSTEM AND SECRETS

FEED FOR GROWING CHICKS AND MAKING EGGS AT 15c PER BUSHEL explained by the Briggs System. No machinery; no cooking.

95 PER CENT OF ALL CHICKS HATCHED CAN BE RAISED

2,000 layers and 3,000 chicks can be cared for without help by one person and still have time for other work—\$25.00 saved on every hundred chicks raised to maturity by the wonderful Briggs System. ENDORSED BY HUNDREDS OF LEADING SUCCESSFUL POULTRY MEN—HUNDREDS OF UNQUALIFIED TESTIMONIALS IN OUR POSSESSION.

"PROFITS IN POULTRY KEEPING SOLVED"

This great book by Edgar Briggs tells how to increase your present profits or start a profitable and easy occupation. Failures unknown when the BRIGGS SYSTEM is used. It meets every condition and covers every part of the business. Keeps hens in the pink of condition and produces more eggs than any other System; molts hens early, and fowls are rarely sick when this wonderful System is followed.

THE SECRET OF TURKEY RAISING IS ALSO BARED

THIS BOOK HAS NEVER BEEN SOLD FOR LESS THAN \$5.00 PER COPY, and thousands covering several editions are being followed by an equal number of successful poultry raisers. WE HAVE PURCHASED THE SOLE RIGHTS OF PUBLICATION FROM THE AUTHOR, MR. BRIGGS, and have just REDUCED THE PRICE FROM \$5.00 TO \$1.25 PER COPY, including one year's subscription to "Poultry Success," regular price 50 cents, so under the great offer you get the Briggs System book for only 75 cents. We have also just taken off the press "BRIGGS' SECRETS IN POULTRY CULTURE," containing most valuable and never before published secrets that have produced wonderful and easily obtainable results. These secrets are alone worth the price of the book, but under our great offer you get them FREE.

SPECIAL OFFER

WHILE THE PRESENT EDITION OF THE BRIGGS SYSTEM AND SECRET BOOKS LASTS. IF YOU WILL REMIT US \$1.25, WE WILL SEND IMMEDIATELY A COPY OF BRIGGS' WONDERFUL SYSTEM BOOK, VIZ., PROFITS IN POULTRY CULTURE SOLVED, also a set of BRIGGS' SECRETS IN POULTRY CULTURE, and include also POULTRY SUCCESS, one year. Even if you already have a copy of "Profits in Poultry Keeping Solved," you are losing money every day by not having the supplemental publication "SECRETS IN POULTRY CULTURE." POULTRY SUCCESS is admittedly the world's leading and best POULTRY JOURNAL, 20 years old, 86 to 164 pages, beautifully illustrated and printed. Most competent and experienced writers in the country, 50c a year. It is the 20th Century Poultry Magazine. Sample and circulars free. Address

American Poultry Journal
Western Poultry Journal
Farm-Poultry } **ALL THREE FOR**
75 CENTS
Regular Price, \$1.50

American Poultry Journal is the oldest, largest and handsomest poultry paper in the world, and is conceded to be the leader in all things pertaining to poultry. Is copied by both old and new poultry publications. In fact, it has no equal. Now in its 40th volume.

Farm-Poultry, published at Boston, Mass., is one of the oldest and best poultry magazines published in the East, and is now in its 20th volume. This magazine is always full of valuable information pertaining to thoroughbred poultry, and covers the Eastern field in a most thorough manner.

Western Poultry Journal, published at Cedar Rapids, Iowa, is in its 21st volume, and is one of the most up-to-date poultry magazines published in the West. The two, together with the old reliable American Poultry Journal, thoroughly cover the entire field of poultry literature, and make a poultry library in themselves.

The Greatest Combination Ever Offered

and especially so when you take into consideration the fact that American Poultry Journal contains from 60 to 150 pages of interesting matter, any number of which is worth more than we are asking for one year's subscription to all three magazines.

This offer is for both new and renewal subscriptions. Cut out the coupon and send in your order today. Address all orders to

Line-bred for heavy winter egg production. Stock and eggs for sale. I can furnish you stock to win at the fall fairs reasonable. Circular free; mention paper. **Willard J. Thorniley** : : Marietta, Ohio

FERRIS' S. C. W. LEGHORNS

WILL WIN FOR YOU

LOOK at this cock, winner of four first prizes. Notice his fine head, his concave back, his low tail, his style and finish. He is a large fellow, with pure white plumage and rich yellow shanks—a typical Ferris' White Leghorn.

His chicks show the same good points that have made him an easy winner at four large shows, and many of them are early hatched, ready to sell now.

He is but one of several remarkably fine males that were in our breeding yards last season, including winners at

Chicago, St. Louis, Toledo, Detroit, Grand Rapids and the Michigan State Fair

Hundreds of their chicks have reached maturity; they are large, snow white and typical in shape, with fine heads and low tails, and they will win for you wherever you want to exhibit.

Prices are as low as such high grade stock can possibly be sold for. Exhibition males \$5.00 to \$35.00; exhibition females, \$4.00 to \$20.00; choice breeding stock at \$2.00 and \$3.00. Let me tell you more about our exhibition—breeding males at \$5.00, \$7.00 and \$10.00; they will win and breed winners.

I Ship Anywhere on Approval

Keep the birds three days, compare them with others and if you don't agree that they are worth a good deal more than I'll charge, send them back at my expense and I will return your money at once.

Remember that we breed for size, health, vigor and profit as well as for standard qualities. We raise our chicks on free range and never breed from weak or unproductive stock, however good they are from a fancy standpoint.

Send for my new 24-page catalog—it tells why you need this strain of winners bred to pay. Shows unretouched photos of the birds I sell, gives a complete list of winnings and explains why Ferris' Leghorns are so healthy, vigorous and profitable. A postal brings it.

Poultry Farms For Sale

HERE ARE SOME BARGAINS

**No doubt you can find just what you are looking for
Write us for further information**

No. 19.—Business Opportunity. A good paying business in large city in northern Indiana, established 15 years and paying a large profit. Offered only because of owner's failing health. Large lot and factory, buildings and machinery, all for \$5,000. Any one can learn the business. Present owner would remain one year if necessary. Write quick.

No. 20.—Ideal acre place, inside corporate limits, 1¼ miles from heart of city of 65,000 people. Northern Indiana. Rich sandy loam soil, fine southern slope. Lots of fruit and berries. Telephone and mail service; convenient to car line, school, etc.; large 7 room house, cellar, well, city water, 75 bbl. cistern, small barn, chicken houses and yards. Abundance of fruit trees and small fruit. Ideal home and a fine place to garden or raise chickens. Bargain price for quick sale, \$3,200.

No. 23—A 23-acre farm; gravel, rolling, well drained, most in good state of cultivation, now in corn and peas, some woodland, two splendid wells, plenty of fruit, entire farm inclosed with a splendid poultry wire, with four cross fences, all new and first class wire and posts. House a four-room with hall, a good barn 25x40, three poultry houses and 400 thoroughbred S. C. Buff Leghorns and S. C. Buff Orpingtons, about half of each. Located one mile from depot, on R. F. D., with telephone and good surroundings, just one mile from McMinnville, Tenn. Crop and chickens included for \$2,100.

No. 24—Farm of fifty acres midway between Hartford, Conn., and Springfield, Mass., one and a half miles from Massachusetts state line; part timber, sandy loam, southern slope, trout brook, three acres in peaches, other fruit. Eight-room house, barn and poultry house; running spring water in house and barn. Good location for poultry. Price, \$2,400.

No. 25—80 acres one mile from bustling Michigan town, 40 acres clear and 40 timber. Posts and fuel for life. Sandy soil, best of drainage, never sours; 325 young fruit trees and 50 grapevines. Handy to either Chicago or Grand Rapids markets. New barn and plastered house; 2,100 square feet of poultry houses; \$3,700 will take—\$2,000 cash and balance easy terms. If taken soon will give buyer 200 chickens, a cow, and a good horse with harness. Splendid water, tubular well.

No. 26—78-acre poultry and bee farm in a city of 9,000; 15 minutes' walk from court house; county seat; bordered by the Cedar river; fine place for ducks and geese; the best water on place, also living spring on place; rich sandy soil; a new 8-room house, modern, fine cellar; new big barn, room for horses and cows, lots of hay room; a roomy buggy shed, feed shed and work house and chicken house 15x30, one 15x20, and 8 colony houses, 5 big yards for chickens, all fenced with poultry netting; bee cellar; good new apple orchard, bearing; also plums, two strawberry beds, currants,

and other small fruit; sold over \$200 worth of strawberries last season. Land very fertile, all under cultivation. This would make a good truck farm; the best of market here. This place is located in one of the best cities in southern Minnesota. A fine pasture for cow and horse along the river; place all fenced. This is an ideal place and summer resort; fine fishing and boating; electric light to place; good shipping point; 7 divisions. This is one of the largest poultry and bee farms in the Northwest, doing a fine business. Customers all over the United States and foreign countries; well advertised; keep around 500 to 800 birds and 60 to 100 stands of bees; good bee location. This is an ideal place for some one to step right in and do a good business; everything in first class condition; best poultry plant in state. Price \$6,500, \$4,000 cash.

No. 27—40-acre fruit and poultry farm. A1 condition, all fenced, large and small fruit in bearing; modern; capacity, 5,000 fowls. Four and one-half miles from town of 18,000. Excellent railroad facilities. Central Illinois. Splendid market, climate and water. Poor health of owner cause of sale. Booklet on application. \$8,000.

No. 28—18 acres in New Jersey, good soil, part gravel, sloping to south; 8-10 acres clear, balance tall timber; 60 fruit trees, all bearing; small 2-room house, stable for one horse; large shade trees; only two and a half miles from Mays Landing, N. J.; on good road; 17 miles from Atlantic City. Bargain at \$850 cash.

No. 29—Farm of 8 acres, rolling and well drained, ten minutes' walk of postoffice; inside city limits, town of 1,700; all seeded to alfalfa and clover, save the pasture. Pasture is clover and bluegrass and is well shaded, with running water most of the year. Farm fronts on Lake Tetonka and has 300 yards of beach, and the Cannon river feeds and drains this lake as well as six others, in which the finest fishing in Minnesota is to be found. Town is on Great Western and Minneapolis and St. Louis railroads. Good express facilities. Telephone; mail delivered at door; 16-foot launch, two fine rowboats, spearing scow and sail, all go with place; boats are new. Three horse engine in stable for grinding bone and feed, churning, making shipping crates. Excellent lath and plastered barn; driving horse and runabout, spring wagon, two harnesses, Jersey cow, 100 head of finest quality breeding stock of Barred Rocks, with a business well established; incubators and brooders, poultry houses and yards enough to go ahead breeding on up-to-the-minute plans. Flock of Homer and Faintail pigeons. Place grows enough hay to care for horse and cow. Climate finest in southern Minnesota. Birds grow fast and hot summers never injure their color. Dwelling, seven big rooms, in fine shape. cement cellar, all built warm and well shaded; berries, apples a-plenty. Beautiful lawn. The greatest of duck, snipe, quail and rabbit shooting all at hand. Price, \$3,950 cash and immediate possession.

AMERICAN POULTRY JOURNAL PUB. CO.
358 DEARBORN STREET : : : CHICAGO, ILLINOIS

WE LEAD OTHERS FOLLOW

THIS has been true since the first issue of American Poultry Journal, and today it is more in evidence than ever before; as there is not a poultry magazine published in the United States that does not follow in our footsteps to a greater or less extent. Poultry magazines, like the seasons, come and go, but the American Poultry Journal goes on forever.

This season we have the largest and best staff ever gotten together on any poultry magazine and include such well known men as I. K. Felch, Rev. C. E. Petersen, Dr. H. F. Ballard, C. W. Zimmer, H. P. Schwab, Amos Burhans, W. E. Stanfield, Joe Coleman and J. C. Johnson.

These men write from actual experience and not from theory, and our readers and advertisers can always depend on what they say.

There is no poultry paper published that is as free from personal fights and "bickerings" as American Poultry Journal.

OUR AIM

is to give the subscriber just what he pays his money for—a **poultry paper** that will be a great help to him in his efforts to produce more and better poultry, and at the same time realize a good fair profit for his efforts.

When you subscribe for or advertise in American Poultry Journal you are not investing your money in an experiment, but in a paper that has an established reputation, a reputation that is built on sound business principles, and on these we solicit your patronage, and ask that you send for a sample copy of the oldest, largest and best poultry paper in the world, the

AMERICAN POULTRY JOURNAL

PUBLISHED BY

American Poultry Journal Publishing Co.

358 DEARBORN STREET

CHICAGO, ILLINOIS

AMERICAN POULTRY WORLD

AMERICAN POULTRY WORLD is to be published at Buffalo, N. Y., by the American Poultry Publishing Co., and the first number will be issued Nov. 1st. Officers of the Company are: President, Grant M. Curtis; vice-president, Prince T. Woods, M. D.; secretary-treasurer, L. M. Avise; Directors: the president, vice-president and William C. Denny. Editors and artists of the new paper are: Editor, Mr. Curtis; managing editor and conductor of practical departments, Dr. Woods; Standard editor and conductor of Standard departments, J. H. Drevenstedt; associate editor and manager of circulation and advertising depts., Mr. Denny; editor Woman's depts., Helen T. Woods; artist-in-chief, A. O. Schilling; associate artists, F. L. Sewell and I. W. Burgess. American Poultry Pub. Co. is incorporated under New York State laws with an authorized capital stock of \$25,000.00, all of which has been sold, eighty per cent. being owned by above named persons.

THE SCOPE AND POLICY of the new paper is to be as broad as the name indicates. The publishers intend it to be a poultry paper for the **BEGINNER** and the **EXPERIENCED**, for the **PRACTICAL POULTRYMAN** as well as for the **BREEDER OF EXHIBITION FOWLS**. The editors have arranged to give its subscribers a list of practical and Standard articles that is believed to be the most complete and instructive ever prepared by the leading authorities and successful poultrymen of the United States and Canada. See 20-page Prospectus for list.

POULTRY KNOWLEDGE AND ADVICE: In the plans for building up the Circulation of **AMERICAN POULTRY WORLD**, instead of putting money into articles of merchandise and offering them to club raisers, we have adopted the policy of **PAYING CASH** to the persons, who, month after month, are to contribute **VALUABLE INFORMATION** to our columns. In other words, we are buying **THE VERY BEST TO BE HAD IN POULTRY KNOWLEDGE AND ADVICE** and offering the **Simon-Pure Article** to the Intelligent and Discriminating reader. That is our **MAIN INDUCEMENT** to get subscribers. The only premiums we give are down-to-date poultry books. A limited number of contributors to American Poultry World are shown herewith. In the space here available we can present only a condensed outline of the valuable features of the New Paper.

SPECIAL ARTICLES ON PRACTICAL TOPICS, twenty-four in number by Dr. Woods, including the following, as examples: Winter Chickens for Profit; Winter Eggs and How to Get Them; Common Colds and Other Ailments; Egg Farming for Profit; At Work With Incubators; Care of Early Chickens in Brooders; Early Pullets for Egg Production; Insect Pests and How to Fight Them; Seasonable Spring Work; Chicken Coops

and Shelters; Care of Growing Stock, etc., etc. Series will be illustrated by use of numerous special drawings and photo-engravings.

STANDARD BREEDS AND VARIETIES: Thirty-six exceptionally valuable articles by J. H. Drevenstedt, giving the origin, treating of the development and telling in detail how to breed popular Standard varieties, including White, Silver, Partridge and Columbian Wyandottes, White and Brown Leghorns, Buff, White and Black Orpingtons, Light Brahmas, Buff and Partridge Cochins, Black Langshans, Silver Penciled Plymouth Rocks, Black Minorcas, Houdans, Hamburgs and Polish, Exhibition Games and Game Bantams, etc., etc. Articles are profusely illustrated from original sources, past and present, and are contributed to by more than three hundred well-known breeders and specialists.

SHOWROOM SUCCESS: Twenty-four carefully prepared articles by Mr. Drevenstedt (twenty-five years a poultry judge) giving reliable and candid advice on how to succeed as an exhibitor, including these subjects, as examples: Washing and Bleaching Show Birds; Shipping Birds to Shows; The Show Bird's Toilet; Show Rules and Regulations; Judging Exhibition Fowls; New Comparison Rate Card; Evolution of the Fall Shows; The Passing of The Huckster; Social Side of the Poultry Business; etc., etc. Fully illustrated by A. P. W. artists.

STANDARD BREEDS AND VARIETIES: Twenty-four articles by William C. Denny, treating of Plymouth Rocks, Barred, Buff and White; Buff Wyandottes, Rhode Island Reds, and Buff and Red Color. How to Mate to Overcome Common Defects in Shape and Color and approach Standard Plymouth Rock ideals. Illustrated with ideal drawings, charts and photo engravings. Review of the Origin, Rise and Development of "The Indians of the Hen Family." Features in Shape and Color that made "The Reds" a distinctive breed. Illustrated. Exhaustive treatise on Buff Color, including the origin of Buff as a color of domestic poultry, the obstacles that have been overcome and present day excellence.

SPECIAL ARTICLES BY WOMEN, twenty-eight in number, treating of practical and Standard subjects with particular reference to Woman's Work With Poultry, written for American Poultry World by Mrs. Mollie McClaughry Allen, Oswego, N. Y., experienced poultry raiser and institute lecturer on poultry for profit; Mrs. Harriet Wallace Ashby, Des Moines, Ia., practical poultry keeper, editor, author and lecturer; Miss Bertha M. Tyson, Rising Sun, Md., successful turkey raiser for market and show purposes; Miss Frances E. Wheeler, Chazy, N. Y., experienced grower of chickens and ducks for market and Mrs. U. R. Fishel, Hope, Ind., breeder of exhibition quality Bronze Turkeys. We very much regret that lack of space prevents publication here of list of articles. See 20-page Prospectus for titles and sub-titles.

AMERICAN POULTRY WORLD

GOVERNMENT WORK FOR THE POULTRY INDUSTRY: Series of fifty-six strictly practical articles, Based on Experiment Station results, written for American Poultry World by Jas. E. Rice, Professor of Poultry Husbandry, New York State College of Agriculture, Cornell University, Ithaca; Prof. James Dryden, Oregon Agricultural College, Corvallis; by H. C. Pierce, poultry instructor, Iowa State Agricultural College, Ames; by D. J. Lambert, poultry lecturer, Rhode Island College of Agriculture and Mechanic Arts, Kingston; by Horace Atwood, poultry director West Virginia Experiment Station, Morgantown; by Prof. A. G. Gilbert, instructor and poultry director Central Experimental Farm, Ottawa, Canada; by W. R. Graham, manager and lecturer poultry department, Ontario Agricultural College, Guelph, Canada; by Dr. Leo. F. Rettger, department of Bacteriology and Hygiene, Sheffield Scientific School, Yale University; by F. H. Stoneburn, Professor of Poultry Husbandry at Connecticut Agricultural College, Storrs; and by C. L. Opperman, poultry manager, Maryland Agricultural Experiment Station. Space forbids giving even the main titles of the subjects. See Prospectus for list of articles, the most complete and instructive of the kind ever prepared for a poultry magazine.

BANTAMS FOR PLEASURE AND PROFIT: A series of twelve articles by Arthur O. Schilling, artist, breeder and judge, telling how to house, care for, mate and exhibit the most popular varieties of Bantams, including Cochins, Rose Comb, Japanese, Sebright, Brahma, Polish, Silkies and other Ornamental Bantams. Numerous photo-illustrations of American, Canadian and English winners. Articles contributed to by the leading successful Bantam fanciers and exhibitors.

SYMPOSIUM SERIES: This series (a monthly feature) consists of Practical and Standard QUESTIONS asked of Several Hundred best-known and most successful poultrymen and women of the United States and Canada, with ANSWERS boiled down into TIMELY ADVICE on live subjects—on the everyday problems in the poultry yard and show room. More than sixty sets of these questions (six to twelve to the set) have been compiled and more than five hundred poultrymen and women have favored us with frank and reliable replies.

SUBSCRIPTION PRICE of AMERICAN POULTRY WORLD is 50 cents per year in advance, or \$1.00 FOR THE FIRST THREE YEARS. Canadian subscriptions 75 cents per year, or three years for \$1.75. Please remit by Post Office or Express money order. Cash or stamps should be sent by registered mail. Address all communications to

AMERICAN POULTRY PUBLISHING CO.

STAFFORD BUILDING, - - - - - BUFFALO, N. Y., U. S. A.

1910 STANDARD OF PERFECTION SERIES: Contributed to by A. C. Smith, Waltham, Mass, F. J. Marshall, Atlanta, Ga., Jas. A. Tucker, Concord, Mich., Sharpe Butterfield, Windsor, Ontario, W. S. Russell, Ottumwa, Iowa, and Messrs. Drevenstedt and Denny, all members of the Revision Committee for 1910, telling what important changes have been made in the American Standard of Perfection, why they were made, what the effect will be on the mating, breeding and exhibiting of Standard Fowls and how to Get Ready for the Use and Application of the Latest Revised Standard to Be In Force during 1910-1915. Every breeder of Standard Fowls should read and profit by this series of timely articles before he mates his birds to produce winners for the season of 1910-1911.

A. P. W. REGULAR DEPARTMENTS: They will be Twelve In Number, as follows: Questions and Answers, Health and Hygiene, Hatching and Rearing, Experience Exchange, Markets and Marketing, Government Work for Poultry Industry, conducted by Dr. Woods; Show Room Success, Interpreting the Standard, conducted by Mr. Drevenstedt; Women's Work and Success, Best for the Table, conducted by Mrs. Woods; Specialty Clubs and Local Associations, conducted by Mr. Denny.

ORPINGTONS

Buff, Black and White

Your order is solicited in view of these liberal assurances. Bear this in mind for your present or future requirements. To avoid inconvenience and delay, be sure and specify the quality desired. My catalog and Fall sale list is free. I won more prizes on Orpingtons at 1908 Chicago shows than any other exhibitor. There's a reason. Start right and you'll succeed. C. S. Byers, Orpington Specialist Eleven Years, Hazelrigg, Indiana

ALL the world is waiting for the fellow who delivers the goods. Now, I have the stock, it's the kind you need, the kind that will make you money. I know that no breeder in the States can and will give you more value for your money than I can and will give you at this time. My complete stock of carefully line bred birds, including hundreds of exhibition specimens, means something, and an enviable show record awaits the early purchaser of this show stock, which I will condition for your show if desired. Your better interests will be guarded, not forgotten the moment your money is received. If sent this way, I want your order, and when I get it the treatment accorded you will merit a continuance of your valued patronage. If stock ordered is not satisfactory, advise me promptly and tell me why, and I will replace it or refund your money. I am not in the business for pecuniary gain only.

COL. WYANDOTTES AND BARRED ROCKS

Ohio State Fair Winners

In Columbians, in a hot class, we won 1, 2 pullet, 2 cockerel; three premiums on four entries. We have correct Wyandotte type; short back and legs with fine black markings. Plenty of fine ckls. and pullets for sale.

RECORD BOOK FREE

It will show you how many eggs were laid today, how many chickens you are hatching, how many you raise and sell, and just what each hatch nets. Men who are succeeding in other lines of business keep such records.

Why should not you, when we start you free?

Ertel's Poultry Diary has hundreds of money making pointers for the poultry man—how to have eggs and broilers to sell when prices are high—how to raise the heaviest fowls—how to take care of the flock—how to feed—how to treat sickness. The Diary tells about our new side regulators. They leave the top of the incubator entirely clear. Other improvements follow the suggestions of U. S. Department of Agriculture experts. We make low prices. We pay the freight. Get Ertel's Poultry Diary and watch the progress in incubator construction. It costs only a postal and may save you a mistake in purchasing an out of date machine. Better write us today. **GEO. ERTEL CO., Quincy, Ill.** Established 1867.

**Throw Away The Dangerous Oil Lamps and Other Old Fashioned Methods**

THIS is the System that is Saving Money and Brooding Stronger Chicks for Progressive Poultrymen. Write for full particulars—Free. **HOT WATER** heat cheap and healthy; automatic **TEMPERATURE REGULATOR** that absolutely insures even temperature desired. Hover construction that prevents crowding and is easy to clean.

Candee Hot Water Brooder Co. : **Box B** : **Dewitt, New York**

POULTRY AND TRUCK FARMS

All sizes. Terms to suit. Where the little chicks can run in clover the whole year around. Have kale, cabbage, spinach, onions, radishes, lettuce, etc., out all winter and summer. Summers are long and pleasant—no prostrations. Winters are short and mild. We raise fine berries, grapes, all kinds of fruits, grains and grasses. For further particulars send 25c for a yearly subscription to the

Virginia Farmer, Dept BB, Emporia, Va.

The Incubator YOU Want is the One that Hatches the Most "Livable" Chicks

It makes no difference to you on what principles a machine hatches—BUT it does make a difference how many "livable" chicks you get from each hatch. It is very discouraging to find at the end of the 21 days that from $\frac{1}{2}$ to $\frac{3}{4}$ of the chicks are "dead-in-the-shell" and a few days later to have "white diarrhoea" carry off $\frac{1}{2}$ the remainder. The trouble is improper hatching. What you and every other buyer of an incubator wants is a machine that hatches chicks that live. When we tell you we have that incubator we don't base our claim on theory or guesswork, but instead on actual, practical results already obtained by those who are operating our machines. For instance read Mr. Leon L. Hough's letter. We have hundreds just as strong.

Prairie State Incubators and Brooders

work on a different principle than any others. They copy nature almost to perfection. That's why they not only hatch more chicks and raise them, but why they hatch bigger, stronger chicks—chicks that live and incidentally they are the kind that bring you profit. You will be interested to learn how they do this so successfully. Our 1909 Catalog tells the whole story. It's free.

PRAIRIE STATE INCUBATOR CO.,
468 Main St., Homer City, Pa.

12,000 Big Strong Chicks
Were hatched by me in Prairie State Incubators during April, May and June this year. The hatches averaged better than 90 per cent and went as high as 98 percent. These chicks were shipped as far as 2,000 miles with only 7 reported dead in the whole 12,000. How is that for vigor? Leon L. Hough, Centerville N.Y.

Still Alive and Back in the Old Reliable with Our

Brahmas, Barred and White Ply. Rocks, Columbian and White Wyandottes

They are as fine as ever and strictly up-to-date. Brahmas—\$3.50 to \$10 for females; \$5 to \$20 for males. All Others—\$2.50 to \$8 for females; \$4 to \$15 for males. LYMAN H. HILL, Sta. 3, JACKSON, MICH.

"Tricks of the Poultry Trade"

THIS BOOK is different from any other book, as it gives you not only the good side of many "tricks," "methods" and "systems" of poultry raising, but also points out the weakness of each so-called "system," etc. It leaves you to select a method that will suit you after showing you the weakness of each. It is the results of years of practice, investigations and observations on big poultry farms. It is not a one-idea or one-man book, but the experiences and discoveries of many.

The author, Reese V. Hicks, is well known to the poultry fraternity as a writer, practical poultry breeder, poultry institute lecturer, and member of the Executive Committee of the American Poultry Association. He is known in the business for his straight-from-the-shoulder work for a square deal for every one. This book, "Tricks of the Poultry Trade" is just what it's name implies—a fair, square presentation of both the good and weak points of various systems. You need it if you are in the poultry business. No matter if you are an old breeder or new one, you can get pointers from this book that are worth money to you every day.

Some Good Tricks for Every Poultryman to Know

Famous winter egg ration formulas.
Formulas for several poultry feeds and tonics.
The trick of a good or bad start in the business.
How to handle incubators so as to have the most live chicks.
How to grow pullets that lay young and make a large yearly egg yield.
Three recipes for preserving eggs for months at a cost of half-cent a dozen.
Formulas for making louse killers at a cost of only a few cents a gallon.

The trick of quick fattening ration.
Many shrewd tricks in handling the small chicks.
How to detect and cure all common poultry disease
How to increase the egg yield of your flock and never use trap nests.
Formulas for mixing your own chick feed at a saving of over 100 per cent.
Plans for building cheap, sensible houses, feed-hoppers, trapnests, and other fixtures.
The tricks of breaking hens from all bad habits—egg-eating, feather-pulling, fence flying, setting, etc.

Some Valuable Tricks for Every Fancier

How to grow extra large males.
The tricks of more pullets than cockerels.
Some tricks to secure highly fertile eggs.
How some fanciers fake in fitting for the show.
The several ways to tell the age of fowls and eggs.
Four methods of washing and treating white fowls to remove dirt, sap, and brassiness.
The trick of taking a bird from an exhibition coop without damage to its feathers.

How to keep eggs from hatching.
How to detect various methods of faking.
How to train a bird to pose for exhibition.
How to prevent lopped combs in the show room.
How to breed for generations and introduce no outside blood and still not inbreed.
How to brighten up face, wattles, and comb so as to remove temporary foreign color.
How to pedigree-breed—know each hen's egg and not use trap nests.

But this is not all the things discussed fully in this book. It is chuck full of information from cover to cover. You will not only read it with much interest but you will put into practice many of the good things you will get out of it and avoid many of the weak things that it tells you of. It contains many "short cuts" any one of which is worth the price of the book several times over.

OUR SPECIAL OFFER

In order to introduce this book, we will send American Poultry Journal, the leading poultry journal of the world, one year, and a copy of this book, postpaid, for 75c. Send all orders to

METAL MOTHERS

OUR NEW DISCOVERIES MAKE

POULTRY KEEPING EASY AND PROFITS SURE

OUR MACHINES were used exclusively in the original PhiloSystem plant where over \$1500 FROM 60 HENS IN TEN MONTHS. has been cleared from the sale of eggs, baby chicks and fowls raised on a city lot 40 feet square. One of the largest hatching plants in America saved over \$700 this year by using our system of brooding. We sell the best brooder ever made for only \$2.50.

One party hatched and raised \$500 worth of poultry last year with four Metal Mothers, and hundreds of others are delighted with our machines and our new way of raising poultry. Our combined machine hatches and broods perfectly at the same time with only one lamp and one-fifth the oil used in other machines. Once filling the lamp completes the hatch. It runs as steady as a clock in any room from cellar to garret, and our Long Burning Safety Lamp runs on for weeks without attention. It is the only machine that airs the eggs in the natural way and applies the heat to the chicks like the mother hen

THE BROODER-HATCHER

OUR 1909 PATTERN METAL MOTHERS are the perfected results of the latest discoveries in artificial incubation. They will hatch hens, ducks, turkey and goose eggs equally well and at the same time. Regulation of moisture and heat entirely automatic. One Metal Mother complete \$7.50; two, \$14; four, \$24. One Hatcher complete \$5; two, \$9; four, \$17; six, \$24. Catalogue free.

The Cycle Hatcher Co., Elmira, N. Y.

Dear Sirs:—As per your letter I will send you an order for six machines in a few weeks. Am hatching with the one I now have. Got 47 chicks from 50 eggs. Have abandoned all my 200-egg machines. Am practicing in my store with a view to starting my 40-acre poultry plant near town here. Think I can sell a lot of these machines next year.

H. W. White, 311 Ada St., Yankton, S. D.

The Cycle Hatcher Co., Elmira, N. Y.

Gentlemen:—The hatcher we bought of you last May is all right. We took off two hatches with it; one of 43 chicks and one of 46 chicks. All good ones.

Yours respectfully, G. W. Simpson, Austin, Pa.

The Cycle Hatcher Co., Elmira, N. Y.

Sirs:—You people may be interested to know what an experiment with one of your Metal Mothers has done for us. On the 17th of Oct. we put 40 eggs in your machine. 38 of them being fertile, and when hatching time came we were surprised to find 38 chicks from our 38 eggs. This we think an excellent record, for the machine had been placed out in the open weather, the only protection being an old tin covered box. Yours respectfully, J. P. & L. L. Hollinger, R. I. Red Farm, Witner, Pa.

THE QUEST OF THE EXTRAORDINARY LAYER

A Few Eggs in the Early Spring and Summer is the Natural Habit of the Primitive Stock—The Trap Nest a Great Aid in Building Up a Laying Strain—Sixty Eggs About the Limit of One Hen 2,000 Years Ago—Climate, Breed and Care Have Much to do with Egg Production—Average Egg Production 150 Per Year

Written for American Poultry Journal by Rev. C. E. Petersen, Bridgton, Maine

INSPECTION of the ovary and oviduct of a laying hen has often given the idea, to very intelligent persons, that she must produce a certain number of eggs before she can cease to lay under ordinary circumstances, and it is difficult to understand how the numerous eggs, in various stages of development, that there seems destined to follow each other, should be so absolutely under control of the hen herself, that she usually suspends laying in one or, at most, two days, when removed from one run to

another, confined in a coop, or subjected to any treatment that particularly annoys her, even when abundantly supplied with all that is necessary to carry on the production of eggs.

The removal of most of her eggs from the nest as laid may, and often does, cause her to continue to lay without any lengthened pause, but if the eggs are left in the nest, there are few of the breeds that are setters that will not go broody as soon as the nest contains from a dozen to fifteen eggs.

Theorists that know little about poultry may express doubts on this subject, but no practical poultry-keeper will have any doubt about it, and though we may supply an abundant ration just suited to her taste and with all the elements necessary for the production of eggs, the production of eggs only goes on with her consent, that she is much more than a machine that must work under our directions, a foolish statement often made by enthusiasts that lack the faculties of observation, for fact shows us, that we have not only to supply the hen that we wish to lay with all the materials that must enter into the formation of a perfect egg, but also that we must, in this as in some other cases, consult her whims and fancies as far as reasonable, and expect to obtain the best results by offering no great or unnecessary violence to her natural instincts.

Laying a few eggs in the early spring and summer is the natural habit of the primitive stock from which our domesticated fowl sprung from, and by selection and an abundant food supply a habit has been formed to lay a much larger number of eggs, and even of producing them to some extent at all seasons of the year.

Still the natural habit has only been modified, and the tendency of common fowls, with ordinary treatment, is to lay in the spring, to sit and rear their young in the summer, to moult in the autumn, and to take all the care they can of themselves in the winter. Now it makes a great deal of difference to the poultryman whether his hens produce eggs freely in the winter or not, and every inducement is given the hens to become strong producers during the months when eggs run highest, breeding from strong healthy stock, selecting from these the most persistent winter layers by the aid of the trap nest and using them to replenish the strain with.

The modern poultryman cares little about the number of eggs a hen can produce. What he cares most for is the profit-

able number, and it has repeatedly been shown that the most profitable year of a hen's life is the year after she first begins to lay, for, if well managed, she will lay then during her first winter and continue without much interruption, as the setting propensity is at the minimum during the winter months and eggs at the maximum price.

How many eggs a hen will lay in her lifetime is still a matter of speculation and has been placed by some investigators at from five to six hundred, the most of these being produced the first two years.

The trap nest has been a great aid to select from the flock the hens that lay the largest number of eggs, but breeding from these hens has by no means solved the quest of the extraordinary layer; in fact, from times immemorial large egg records have had their place in the history of the hen, and the person who today exploits the 300-egg hen is not much ahead of the old writers who even did better than that for Caius Plinius Secundus, born A. D. 23, and who wrote his great work, now generally called Pliny's Natural History, in the second half of the first century, speaking about fowls, has this to say regarding their capacity for strong egg production:

"Pullets lay more eggs than the older hens, but they are smaller. In the same brood those chickens are the smallest that are hatched the first and the last. These animals, indeed, are so prolific, that some of them will lay as many as sixty eggs, some daily, some twice a day, and some in such vast numbers that they have been known to die from exhaustion."

It would seem from this record that sixty eggs was supposed to be a large output from one hen about 2,000 years ago, but these eggs were shelled out at the rate of one a day, some hens at the rate of two a day, but among them we find the extraordinary layer, that shelled out "such vast numbers that they have been known to die from exhaustion," and that is "going it some," even for Pliny, and if he did not invent the trap nest, he certainly did invent something else, and others have been following in his footsteps ever since up to the present day.

We do not know if any conclusive tests have ever been made that have definitely settled the laying qualities of all our different breeds of poultry, and as most tests would only cover what a few birds given extra care would do, it could never be taken for a conclusive test that would answer for the breed as a whole, for not only feed and care and housing, but climatic conditions would influence the results.

We have, however, a very definite idea regarding what most of our different breeds can be expected to do under ordinary conditions, and on the whole, we cannot base our estimate on anything else, for to base an estimate on the performance of one individual hen, or even a few hens, would be misleading and of doubtful value to the rank and file of the American poultry breeder.

What may be done by judicious selection and breeding together of these individual examples we are not in a position to say at the present state of knowledge in this direction, for most of the experiments made have not been successful in proving that the hens that lay the largest number of eggs will throw this desirable trait to her offspring.

Mr. T. F. McGrew gives the following as the average egg production in the breeds named under the very best management:

	Per year
Barred Plymouth Rocks.....	150
Buff Plymouth Rocks.....	150
Single Comb Brown Leghorns.....	160
Single Comb Buff Leghorns.....	160
Rhode Island Reds.....	150
White and Silver Wyandottes.....	150

Many other breeds could be added to this list that would

average about the same amount of eggs during the year, and it is a noticeable fact that in most of the experiments—yes, in all of them—it is the pure-bred fowl that does the laying. The ordinary mongrel stock of the country does not make large egg records.

The noted laying breeds, such as the Leghorns, Minorcas, Andalusians and Hamburgs, are somewhat sensitive to cold, and to induce them to lay in winter they must be given the best of care and properly prepared rations.

The Houdans, the Plymouth Rocks, the Wyandottes and the Light Brahmans and Rhode Island Reds make first-class winter layers, and even with ordinary care and no extra attention will produce some eggs during the winter months.

Whatever our poultry shows have done for us, it may be safely and sanely said that they have not been responsible for the increased egg production in our pure bred fowls, but have probably done much in the opposite direction, as the useful and important quality of egg laying cannot be ascertained or brought out at a competitive exhibition, and as size is of immense importance from an exhibitor's point of view, egg laying at an early date is discouraged to facilitate further growth long after the fowls ought to be laying.

In those breeds in which excessive size has not been insisted

“The number of eggs annually produced varies with the climate, breed, and the attention paid to the hens. Buffon asserts that a hen, under favorable circumstances, will lay one hundred and fifty eggs in a year, besides bringing up two broods of chickens, but this appears to be an over-estimate for this climate. He states that ‘It is said that at Malacca and other places hens lay twice a day,’ and we see it stated in some of the poultry books, that one particular breed will lay an egg every day in the year. A poultry-yard stocked with only forty of these miraculous hens would, of course, furnish the very extravagant number of 14,600 eggs in the course of a year.

“But, leaving these old wives’ fables, we shall record several statements from American practical writers, which may enable us to form some judgment on this matter. It should be remembered, however, that all these have been recorded, because they were thought to be extraordinary products, and therefore the average number, under ordinary circumstances, must be considerably smaller.

No. 1. A yard of forty hens, mostly pullets, and three cocks, yielded in ninety days, between January and May, 1,440 eggs.

“No. 2. Another, containing sixty hens, yielded in 160 days, between February and August, 2,655 eggs. It is worthy of remark that the same fowls the previous year, but not so well provided for, yielded only 1,000 eggs.

“No. 3. Another of 83 hens gave in one year 7,200 eggs. The expenses were \$56.43. The receipts \$123.33, leaving a balance of \$66.90.

“No. 4. One who writes more in detail states that when his fowls commenced laying he had 37 hens and 3 cocks, and when they ceased laying he had 26, the average being 32. In about 300 days, between January and November, they yielded 3,298 eggs. He raised no chickens.

“No. 5. Eight hens at Chelsea, Mass., yielded, between July and August, in 49 days, 293 eggs.

“No. 6. The most remarkable case of fecundity is that furnished by Mr. Mount, in the same journal (*Cultivator* for 1840). He had three pullets of the Poland or top-knot breed, which had been hatched in June. They began to lay December 15 of the same year, and from that time to December following laid 524 eggs, and only one exhibited any desire to set. During this period they consumed three bushels of barley, 17 pounds of rice, and a quantity of barley meal and peas, the whole not exceeding in price \$3.71.”

Our author naturally concludes from these records that the best breed for eggs is the top-knotted variety, for it will be seen that they laid a fraction over 175 eggs each during the year and this record is about sixty years old.

A number of other instances are given by Mr. Wright and others of which I will make mention of the most remarkable.

A Mr. John Evans, of Keynsham, near Bristol, had two dark Brahma pullets that, in 1870, laid 250 eggs each, and that they were followed by others that laid equally as well.

Mr. Leeworthy, of Barnstable, repeats, in Mr. Wright's book, that an Andalusian hen kept by him in 1856 laid 220 eggs, and that his Minorca hens averaged 200 per annum.

These statements are made very definitely, and appear well authenticated, but the Brahma never lays anything like it nowadays.

Admiral Hornby says that his Spanish fowls laid six eggs a week, from early in February until late in August, of an average weight of 3½ ounces, many of them weighing 4¼ ounces.

This is more than double the weight of an average-sized egg. The same fowls are said to have laid a week between November and February.

All the old poultry books are recording marvelous performances in the way of laying by the Spanish fowls and many of the modern writers still persist in saying that where they have not been ruined by breeding in a large white face and out the strong laying propensities that they are still able to beat any records in egg production.

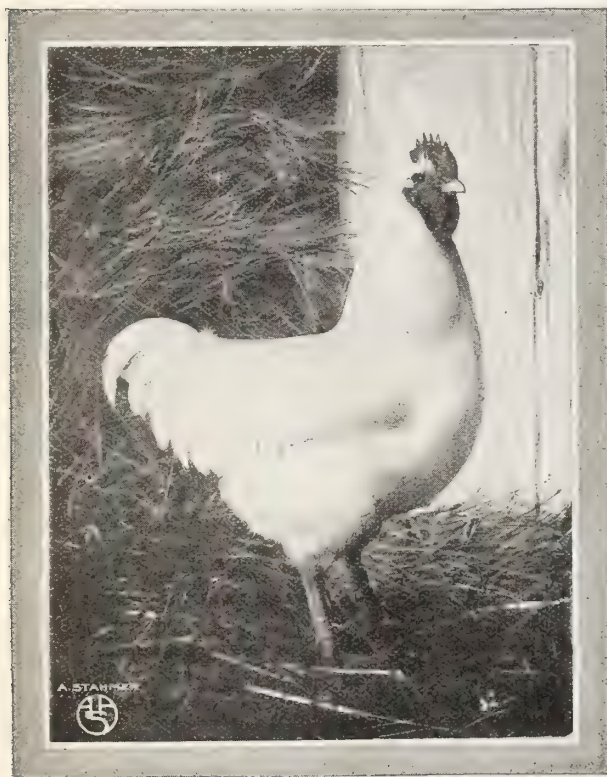

Mr. Coles says that his Andalusians begun laying in December and with scarcely any omission would continue until the following November, averaging four to five eggs each weekly.

There is much indefinite about both these statements, and we should be inclined to think that they were only the sanguine belief of gentlemen enamoured of their fowls, and not very well versed in the details of their performances.

Admiral Hornby's statement shows about fifty pounds weight of eggs from each hen, or about ten times her own weight annually.

In Mr. Tegetmeier's Poultry Book (1873) the Rev. A. G. Brooke says that his Silver Spangled Hamburgs averaged 220 eggs from each hen, and those hens were kept in pens twelve feet long by six feet wide, only one cock and two hens being kept in each pen.

In the spring of 1874 a Golden Penciled Hamburg pullet, bred by Charles Beel, of Appleby, near Nelson, Australia, laid

The type of White Rock males showing low tail carriage.
H. W. Halbach, Waterford, Wis.

on, the result has not been so bad in the same direction, but even with these to breed for standard requirements are more important than for eggs, and many breeders of fancy poultry who used to breed for good laying found it more profitable to breed for feather and no particular attention was paid to the development of strong egg production as long as the birds showed the desired form and orthodox markings.

It is hard work, and take lots of courage to breed a strain of exhibition birds that at the same time had bred in to them a strong and persistent tendency to egg production. It can be done, and has been done in several strains, but the temptation is ever present of retaining for breeding purposes the poor layer that is extra fine in the requirements of the show room. Human nature is human nature the world over.

To give an idea to the reader of what poultry was doing fifty and more years ago I will quote the following instances that are as authentic and as trustworthy as any of the present day records given by breeders, and perhaps more so.

In “The American Poultry Book,” published in New York City 1843, and which, by the way, is the earliest American treatise on poultry we know about, we find the following records, though we are sorry to see that with one exception the breed is not given:

First prize White Plymouth Rock Cockerel, Indianapolis, September 6 to 10, 1909. Mr. Fishel has named his strain "The Best in the World," and his winnings at the great Indianapolis Show last month bear out this fact. Note the fine back and correct tail carriage and the Standard type of the bird. Bred, owned and exhibited by U. R. Fishel, Hope, Ind.

115 eggs in 124 days, and when she sat hatched fifteen chickens, ten of which she reared without any cooping or particular attention.

Mr. Charles Lee in his book "The Houdan Fowl" (1874) writes as follows: "Houdans lay so very well, and there is really so little trouble required with them, that I prefer them to all others, they are hardy and lay well in the winter.

"I hatched some last year in July, and they began to lay a fortnight before Christmas, and continued until they began to moult. I do not pretend to say they have all laid every day throughout that time, but I only had six females of that breed, and I had Houdan eggs nearly (if not quite) every day during the first eight and a half months of this year."

Again he states: "In the last week of December, 1871, ten of my Houdan pullets 'came into profit,' and from that time until the commencement of October of the same year, viz., forty-one weeks, when moulting began, I never got less than thirty eggs per week, but, generally speaking, forty, forty-five or fifty, but at all events, making from the beginning to the termination of their laying season the large number of 1,637 eggs."

This account of the Houdan as a layer is not at all at

HIGHLAND BELL.

One of the greatest producing hens ever owned on Covert's Barred Rock Farm, Willoughby, Ohio. She is the dam of the pullets in first pen Cleveland, 1909, and the second and fourth pullet and color special at the same show, also many other worthy pullets never shown and used in the breeding yards.

variance with our own experience with this fowl for nearly twenty years.

From these accounts covering a number of breeds that might be added to if space would permit it can be readily seen that the large egg records are by no means a new thing, but that at all times there have been phenomenal layers among the different breeds of poultry, and if any authentic gain has been made it is in the spread of pure-bred poultry all over the states and improved methods of feeding that is largely responsible for the increased egg production more than anything else, for breeding to feather is one thing, and for eggs another thing, and the two features combined in one breed is very seldom attained by any one and does not matter a great deal either.

How to go on increasing the phenomenal layers in our flocks is the question to be settled and though breeding from these birds has not been entirely conclusive as to results, still this method will be continued, but the same means of procedure must take place that has been the means of improving all our other domesticated animals, namely the very closest form of inbreeding, for without that not enough blood can be piled up in the flock from these phenomenal layers, and until it is done no marked improvements in the increase of extraordinary layers can be expected.

In the meantime the best means of increasing egg production is to cull out the non-producers and rigidly adhere to the policy of having nothing but strong, healthy and active birds in the laying yards.

USE OF THE SCORE CARD

Each Breed Should Suffer Alike for a Like Defect—Unless the One Score Card Govern the Application of All the Standards Can Equality and Justice Be Secured.

Written for American Poultry Journal by I. K. Felch, Natick, Mass.

Many conceive that the decimal score card changes the standard itself, if we are to believe some of the discussions of the recent American Poultry Association meeting, to-wit: One debater objected to the decimal score card being substituted for the several scales of point with the plea that it would cause a redraft of the standard, it would change it so much.

The score card has nothing to do whatever with a standard, which should be a correct description of the breed for which it is made. The score card is a system that simply discovers all defect found in a specimen to be judged, and defines what the damage these defects should discount the perfect. The defects valued by per cent deducted from the full value of perfection showing the merit value of the specimen judged.

Any intelligent man can see that the score card is no part or parcel of the standard itself, but simply dictates and controls the defect found in judging all farm stock. It shows also as when one score card is used like the decimal being one of 10 sections, each section valued at 10 points, with all defects valued by per cent of their influence upon the perfect. That each and all animated nature, be it horse, cow, dog or fowl, all may compete for a sweepstake prize with an equal chance to win.

It does not matter how or in how many pure groups the several standards have been written up in. The decimal score card simply analyzes and collects all that come under each section of the card, and whatever defect or whatever it finds in the specimen that antagonizes the perfect or description is cut a reasonable per cent of the section's value of 10 points and placed in the out column, to be in their aggregate deducted from the 100 we call perfect, the result being the specimen's record of merit or score.

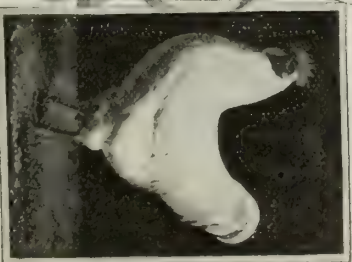

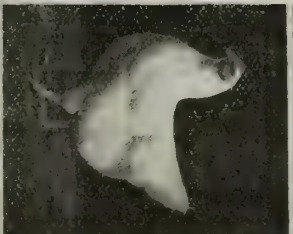

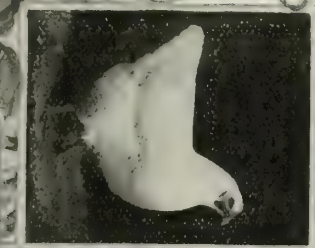

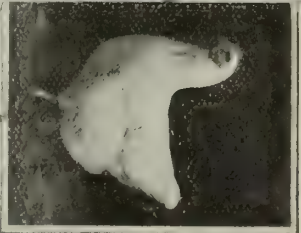

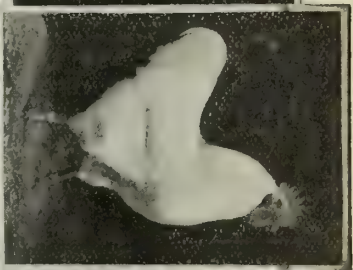

It matters not what may be described as perfect in fowls. In judging them by the decimal system we simply take all that has been described under each section of the card—one-tenth, as we term it, of the entire value of the fowl, and whatever we find in that portion that conflicts with the description as perfect—we consider what such imperfection has damaged perfect description and place in the out column the cut one's judgment shall dictate is just. In this way all through the sections of the score card. The aggregate of these defects deducted from the 100 we call perfection leave the remaining points as the merit value of the specimen judged.

The decimal score card is simply the judge's rule to discover the real merit of a specimen as compared to what is perfect or what is standard by which the specimen is judged.

We claim no other score card or law of adjusting the merit of a specimen with perfection in the breed as good as it has yet been discovered. It is as perfect as our nation's finance—with strict adjustments by per cent in these discounts for whatever is found to militate against standard description we have the best law that can govern poultry judges in their work of adjudicating for prizes and positions in our exhibitions.

The ugly thing we run up against is that defects we find are so varied, so different in themselves, that we have to class them. But judgment in the intelligent human mind is lightning quick in a general way, while we find defects so different in themselves. We are led quickly to consider what each should militate against our standard to find that though different in themselves their effect upon our standard may be legitimately of equal effect as to discount from the perfect for the specimen judged. This adjustment of the many things we discover as not of standard worth is wherein comes the intuitive judgment of the human mind, the accuracy of decision which perfects the judge in his work. To illustrate why, we should have only one scale of points and score card with 10 sections, and each section of same value of 10 points to preserve our rule strictly within the rule of per cent and discount. We ask you to bear with us again while we show you why different scales of points affect equity in judging by score card unless each breed is judged by the same scale of points. In the present standard we have the following valuation for color in the following breeds American class, 41; Asiatics, 31; Mediterranean, 27; English, 34; Dutch, 33; French, 28 and 29; Game, 36; Cornish, 32; Sumatra, 36; Malays, 27.

In all these only two divisions are valued alike for color in the aggregate. Then you see the same per cent of defect fails to be punished alike in only two of the breeds. You will not

WINNERS OF GRAND SPECIAL PRIZES FOR
BEST COLLECTION

OF WHITE PLYMOUTH ROCKS
KIMBURN SQUARE GARDEN NEW YORK 1909

OWEN FARMS
VINEYARD HAVEN MASS

THE "BEST COLLECTION" OF WHITE PLYMOUTH ROCKS AT MADISON SQUARE GARDEN, 1908-1909.

Grouped with the first prize breeding pen at the last New York Madison Square Garden Poultry Show in the picture above are the other Owen Farms White Plymouth Rocks, which, with the pen, won the most points for "Best Collection" of that variety. The winning of no other special could offer greater surety of the general excellence of this widely known strain and of the progress being made by it towards that degree of perfection which breeders strive to attain. It is a large showing of high-class birds, everyone being an important winner at America's foremost show and the embodiment of vigor, standard strain for several years has produced numerous winners that have influenced popular ideals at the foremost shows and will be much studied by the standard makers during the next few months while Standard ideals are being modified to keep pace with progress and the present ideals.—F. T. Sewell.

tell me if all were equally faulty in color that they should not suffer alike if justice and equity be considered.

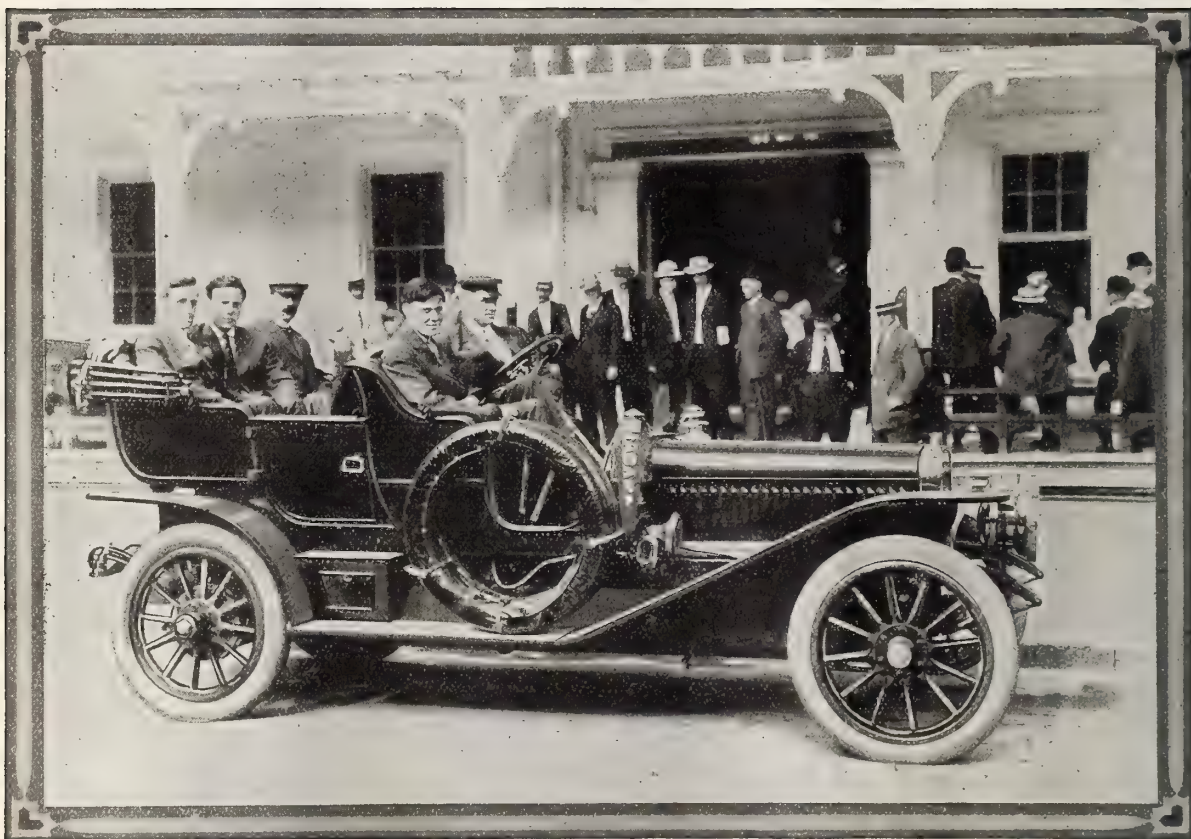

Now say they were all equally faulty—you declare them so by comparison. But the standard says if tied by comparison they shall be scored by their respective standard. In this case they are all to be cut 10 per cent of their color to determine the prize to find: The Leghorn and Malay specimen to tie at a cut of 27-10 points for first and second positions. The Houdan third place by a cut of 24-5 points. The La Fleeche fourth place at 29-10 discount. The Brahma fifth place for 31-10 points discount. Cornish Indian at 31-5 points. Spangle Hamburg, seventh place at 33-10 discount. The Games and Sumatras tying for eighth and ninth places at 33-5 per cent discount, and your pet of American breeds, the Plymouth Rocks, cut 41-10 points. Wherein has equality and justice been secured when, if the decimal system had been the law of applying the different standards if all were faulty 10 per cent they would all have been cut $3\frac{1}{2}$ points, while by the present law of the standard two tie for first and second place, two tie for eighth and ninth place, and your American breed takes the booby prize. If of equal merit they should score alike, should they not?

winner, when, had all been scored for shape by the decimal system of 35 per cent for shape, all would have been cut alike and established the awards as a tie at a cut of 2.9 points. There can be no justice between breeds when there is a definite scale of points for each breed. Every breed's standard must be applied by one and the same law and scale of points. In no other way can we apply their standard with equal justice to all and secure fair play for all with the foregoing. Do you blame the minority in the American Poultry Association for thinking the majority are blind to the best interests of the calling as a whole, and feeling that the breeds are not protected in an equal chance in our exhibitions?

There is no protection outside the law of per cent and discount in the deduction of defect from the perfect in ascertaining the merit value of the specimen, and until we return to shall we be running up against the present discussion and uneven results among judges.

Specific and arbitrary cuts cannot be just in all cases, for there is a degree of effect in all degrees of defect. The judge must make his cuts harmonize, with a just discrimination of the degree, or magnitude of the defect to the perfect.

If we can all use one scale of points and with the rule that

The above picture shows Mr. E. B. Thompson, Amenia, N. Y., the originator of the "Ringlet" Barred Plymouth Rocks, and his two sons and two nephews in his 6-cylinder, 48-horsepower Winton touring car, leaving the Cataract Hotel, Niagara Falls, for his home in Amenia, a distance of 450 miles. Mr. Thompson attended the meeting of the American Poultry Association, which took place at Niagara in August, and made the journey and back of 900 miles in his new automobile. He reports a very enjoyable trip for himself and party by this popular method of traveling.

Equal merit should score alike in all breeds. This can only be secured by each standard being applied by the one rule and score card application, and there is none but the decimal score card that today secures equal and sure justice and equity for all, not only for fowls but enables all the stock of the farm to compete with an equal chance to win a prize offered for all to compete for.

I have spoken as to color. Now suppose there was a prize offered for the best shaped bird in the exhibition and after deliberation by comparison you have determined that a Brahma, a Plymouth Rock, Leghorn and a Game, all males, were of equal merit as far as you could see and you agree as a committee that they in your judgment tie, but that 7 per cent would be a fair cut for shape in all, let us see how they come out by the present standard: The Game is cut 7 per cent of 40, or 2.8 points. The Plymouth Rock is cut 7 per cent of 33, or 2.31. The Brahma 1.89; the Leghorn $2\frac{3}{4}$ points. You see the Brahma wins by a cut 7 per cent on 27, being declared the

all failing to score 85 shall be disqualified from the show and breeding pens, we would need no other disqualifications except for deformity, such as crooked beaks, crooked backs, wry tails which disfigure the specimens and should condemn them to kitchen uses.

Now is the time to subscribe for the American Poultry Journal. It will increase your profits.

A pound of poultry can be grown at less cost than a pound of beef, and is worth more.

Anybody that has the price can buy show birds, but it requires brains to raise them.

Don't forget to separate your cockerels from the pullets.

Don't crowd your growing chicks.

& SON**

D. STAMER
A.P.S.

First prize White Wyandotte Cockerel, Indianapolis, September 6 to 10, 1909. Probably no fanciers have gone to greater expense and time in perfecting a breed than have the Fishels. To breed close to Standard requirement has been their aim, and how well they have succeeded the above illustration will tell.

WHO'S WHO IN HENDOM

FOR a good many seasons I have traveled in the state of Missouri, that commonwealth where it is said the people demand visual demonstration. There is some virtue in this, too, as I will show in the instance of the Missouri peanut vendor. At a certain railroad junction there was once a man who sold peanuts to the passengers on trains. He was making a neat little thing out of the enterprise, but along comes a fellow who claims to be his friend, advising the addition of pop-corn to the line. Others who claimed to be greater friends of this man in trade told him that he could not make a success of the two and that profit on peanuts was better than loss on pop-corn and gubers. But he was one of the show-me sort, so he added a line of pop-corn to his specialty of peanuts. The result was that he busted up in business! He was a peanut man! The chances are that if a seven days' rain of gold dollars had occurred he would not have been able to rustle a spoon, say nothing of a scoop-shovel.

Visual demonstration is a great thing.

When it comes to things hen they have to be shown, every time, down there in Missouri. Five to eight years ago, Missouri was not on the map as regarded the standing she occupied in the poultry fancy, for there were internal dissensions and strife, but the factions united and began to show that by working together they could do things in the show line, that by a pulling together they could accomplish more than a pulling apart. Peanut business was too small for them; they went after bigger game, and from the reports that emanate now from Show-me-land it would seem as if the game was being bagged and the hunt on in full swing.

Missouri has always been a great state when it came to poultry for the table and eggs by the trainload for the high class markets of the world. The fanciers of that state knew that statistics such as the census figures show should demand attention from the lawmakers. They set about to make a big annual state show, one that would be a credit to any section of these Poultry States of America, and then they would be recognized as worthy of support from the state in the improvements hen they might care to work out. The fanciers and poultrymen of Missouri pointed out that the dairy interests, the horticultural interests, the livestock interests and the mining interests, were not worthy of greater support and praise than that of the little farm hen, everywhere laying eggs and surrendering her toothsome carcass, as Coburn would say, to the multitude that would be fed. The millions of dollars that the poultry crop was worth in Missouri was brought to the fore. Not only were figures set down but the facts that the hen, the little feathered creature of commerce, was rampant everywhere, laying eggs and caring for numberless broods of chicks that were to go on laying more eggs and multiplying their kind, were brought forward to advantage.

That the crop could be greatly increased by carefully instructing the masses who kept fowls, was shown, just the same as the livestock interests taught the keeping of pure breeds, and the horticulturists proved that pruning and cultivation and spraying were the essentials to good fruit, fruit that would go without the confines of the state and make a name for Missouri products. Success attended the work, and soon a state appropriation was made to bring out a greater state show, and then a little later the bill was passed inaugurating a poultry board on the same plan as the state horticultural board, the agricultural board, etc.

Geographically speaking, the state is bounded on the east by the city of St. Louis, Henry Steinmesch and a few lingering A. P. A. troubles; on the north by the little old state of Iowa and some dozens of good fanciers in it who make it a point to be at the Missouri state show every year; on the west by Kellerstrass Farm and Kansas City, St. Joseph, Leavenworth, Atchison, and Nevada, each burg mentioned containing its full

quota of henists and chick shows; on the south by Springfield, Joplin and hundreds of fanciers who have the best interests of the poultry industry at heart.

But let us take a little air-trip through the state on the A. J.'s bi-plane and see some of the men who have had a hand in making the industry flourish:

St. Louis seems to be the gateway westward, so let us stop there and coal up. Chicken minds run not to the contrary when we state that Henry Steinmesch discovered this village by the river. He is the original fancier in that part of the country. Silver Wyandottes have always held his attention and this is well for some of you who breed other varieties. Had

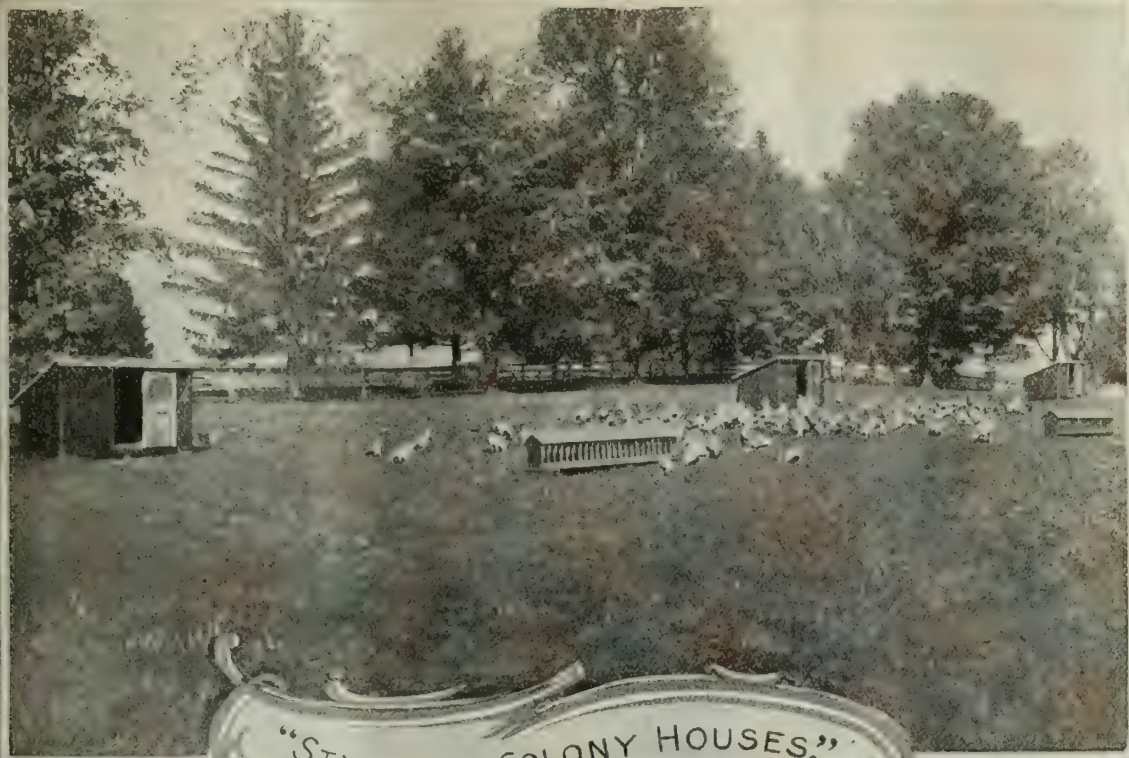

taken anything else to his bosom there would be few le plumers in some hats. At one time not so long since St. Louis town was the hobby of a man who hailed from the port of French Village, Ill., said man being of the name of Hui and a breeder of good White Wyandottes. W. W. Henders also claims St. Louis as his home town in which to show Barred Rocks, though he names Bridgeton as his P. Chamberlain's Perfect Chick Feed first saw the light of day here and will continue to see many more. C. A. Morton, Buff Rock note, resides in St. Louis during the day, but his birds are bred on some beautiful greensward a few miles out.

St. Charles is the next stop and we will alight near the home of Dr. Gossow, fancier and breeder of Buff Cochins. His birds have been winning in the largest shows and they are worth a visit.

Getting under way again we soon near the town of Pleasant Hill, where Knorp Bros. and other breeders make themselves felt. These breeders are Black Langshanites of the deepest dye and will be for some time to come, if we may judge from the amount of energy they put into their breeding and exhibiting operations.

Kansas City is the western point aimed for, as it is a hotbed of chicken fanciers who are never contented with what they have done, but keep going forward. Julius Bachman, the Silver Wyandotte king of this end or side of the state and he wears the crown plainly but ably, as he always has better birds each succeeding year. Fred E. Baldwin, of Chicago Maid fame, lingers here, still breeding Partridge Cochins of the latest type of form and penciling. W. M. Beal, of the P-B Farm, is an officer of the K. C. poultry association, who finds time to breed a few good birds of the White Wyandotte stamp and highest quality. He thoroughly believes in advertising both the Kansas City show and the P-B Farm, and one of the men who made this association the leader in paying early premium money. Tom Southard, who broke into the R. aisle at Chicago last winter with some of the hot sort, has a shingle flirting with you as it swings in the breeze. To Ricksecker, who bought out his partner, Lockhart, and continues the breeding of Reds under his own name, lives in the same place, breeding his birds on ideal ground some little distance from the center of the busy city's turmoil. Other fanciers too numerous to mention help to make this place the winner that it is in a chicken way, not overlooking the Kellerstrass Farm and the gentlemen behind it. You will find more fanciers and breeders in the west today who look forward to a visit on the Kellerstrass Farm than those who hope to make pilgrimages to all the other poultry farms combine. I heard three men in one day recently say that the Kellerstrass Farm was the greatest poultry enterprise in the country and that it was by far the best managed, and they ought to know having had the best of business treatment at the hands of Mr. Ernest Kellerstrass. Yes, this farm is the one great thing that has happened to the fancy in the west during the past fifty years. It has more than done its share to uphold high ideals and good quality of birds and superlative exhibits.

Bowling Green shelters John Hettich and L. E. Meyer, both

"STYLE OF COLONY HOUSES."

"SMALL COOPS FOR HEN AND CHICKS."

Style of colony houses, dry feed troughs and coops for hens and chicks used on the farm of E. B. Thompson, Amenia, N. Y., the originator of the world renowned Ringlet Barred Plymouth Rocks. These coops and colony houses are placed in regular order all over Mr. Thompson's farm and the birds have free and unlimited range over grass. The chicks are transferred from the small coops to the colony houses when about two months old. The coops are perfect, being storm and rat proof and easily cleaned by removing top. The front has two doors, one solid and the other screen. Either to be used according to the weather. Both coops and colony houses are well made of $\frac{3}{4}$ -inch pine lumber and well painted. They are expensive but very durable. Mr. Thompson believes in well made coops and buildings in which to house his valuable "Ringlets" and will have nothing to do with slip shod and flimsy contrivances. Everything about his farm has the appearance of prosperity, solidity and enduring qualities. He states that a coop so constructed that it will save the life of a single chick more than another coop pays for itself quickly and is the kind to use from a business and economical standpoint.

Black Langshan cranks extraordinary. Speak of Black Langshans in the west or the southwest and these names come to mind every time. The same town also harbors other offenders among the ribbon chasers at the winter shows.

Chilecothe is not as chilly in poultry things as the name implies. O. P. Clark, who now hobbies Reds; F. W. Hallett, another Red fancier who really shows good ones; Mrs. W. B. Popham, who has been breeding Barred Rocks as long as the longest in Missouri, and the Walker Poultry Company are all more than locally known and may be depended upon to make competition.

At Columbia we come upon Robert Richards; at Concordia,

duced the poultry bill into the state legislature, breeds the choicest of Single Comb Brown Leghorns. Virgil Blakemore, another Red breeder, ships lots of stock and eggs from this point.

Two breeders not to be overlooked are Frank Morton, breeder of grand Buff Cochins, at King City, and Geo. M. Dewey, Keytesville, producer of the type of White Wyandottes that win at Kansas City and the state shows. Gus L. Hainline, Lamar, is a fancier of the same variety and may be reckoned with to make some keen competition.

Kiney I. Miller, Lancaster, who is breeding some of the best Brahmas in the west; McHugh & Boring, Maitland, maters

SCENES ON THE PITTSFIELD POULTRY FARM, PITTSFIELD, ME.

John Bruns; at Converse, H. H. Stratford; at Crosby, R. C. Mandler; Frank Oviatt, Eldon, another Red crank; Miss Hattie Duncan, Dearborn; Mrs. Payne, Fabius; Sam Tetley, Farmington; J. E. Brasfield, Garden City; E. C. McClaskey, Gallatin; all these are rocks in the foundation of the fancy in the state.

Next we sight Fayette, where Mrs. and Archie Maxwell raise good Rocks; H. P. Mason grows winners in Buff Rocks; W. S. Robison, breeding Buff Rocks also, keeps Mason hot company, and Tom H. Woods, whose father drafted and intro-

duced the finest Barred Rocks; Ike Hudnall, Milan, a keen showman whom the boys can depend on setting a fast pace in the shows, all call themselves to mind for a stop of the air-ship.

Nevada is a bed of Red fanciers who know not defeat and Tom Dunphy is not the least of them. His son T. N. is one of the pillars of affairs in those parts as well. Harley Errett, Buckeye champion, is always remembered when Nevada is mentioned.

The next jump to Oregon sees R. B. Bridgeman, White Dotte breeder and former president of the state association,

and Edw. Fuhrman, grower of White Rocks in large quantities with quality to match.

Robt. Larmer, Buff Rockist, Ravenswood, has been showing down in that section in the hottest shows he could ship to. M. S. Brady, breeder of the famous Fluffy Ruffles, who created something of a stir at Trenton last winter, calls Richards his home city. N. P. Todd, another of the thousand Missouri Red breeders, is located at Rinehart.

St. Joseph is on the card for a stop, so we will alight on Hillcrest Farm, home of Belle Lee, a wonderful Barred Rock pullet and a lot of her close relatives and S. T. Divinia, her owner. Under berry bushes and peach trees these Hillcrest Rocks bask and develop into competition makers. L. E. Altwein, originator of Golden Barred Rocks, the new variety that bids fair to get under way shortly, started these birds on this rich soil. A. L. Schroeder, Light Brahma enthusiast, grows them better each season. E. L. McDonald and Arthur D. Cavey, both energetic promoters of the past St. Joe shows, breed birds of their hobby.

Trenton harbors T. N. Witten, White Rock breeder, and Whitney Bros., Rock producers of the foremost type. Victor Hobbs, Buff Orpington leader, also makes this city his home.

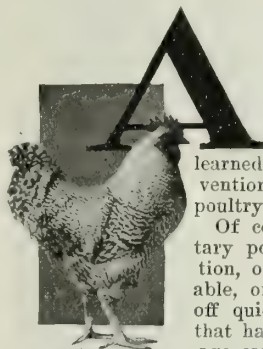

Warrenton is the headquarters of the southwest branch of the A. P. A. so far as the secretary-treasurehip is concerned, and E. L. Delventhal handles the office as well as breeding a few good Buff Rocks.

Otto B. Cannon, Partridge Wyandotte breeder and exhibitor, Elsberry; Dr. H. L. Cannon, Windsor; Frank Temple, Elsberry; T. E. Applegate, Mrs. Gregg, Mrs. Dearing, Mahnken Bros., S. G. Whiprecht, and dozens of others all go to make the fancy of greater strength and dignity. They are

SANITARY POULTRY YARDS

A Good Location the First Essential—Filth Should Not be Allowed to Accumulate—Proper Method of Cleaning and Disinfecting to Prevent Disease and Keep Away Lice and Mites

Written for American Poultry Journal by Karl T. Brown, M. D., Crawfordsville, Ind

S nearly all diseases of poultry, in fact all excepting those due to an error in digestion, come as a result of an insanitary condition, I shall attempt briefly to point out for the amateur (assuming that the veteran poultryman has learned it from a costly experience) a prevention for the insanitary condition in the poultry yard.

Of course, the first essential for a sanitary poultry yard is a well selected location, one with a south slope being preferable, one with a sandy soil that will dry off quickly after a rain. A poultry yard that hasn't a sandy soil and a good drainage can acquire same by a little work and

expense, such as grading, tiling and covering with a coat of sand.

A poultry yard that is used as such from year to year is sure to become insanitary unless the necessary precautions be

Birdseye view of the Model Poultry Yards, F. A. Tecktonius, Prop., Racine, Wis., Route 7.

breeders who may be depended upon to help the cause whenever it needs their assistance.

Every breeder in the state is well posted on what it took to get the state appropriation and now that they have it they are working to make the board of poultry as useful as it can be made. They are all helping Tom Quisenberry, the secretary, keep in close touch with the fields that need work in the missionary line. Tom will be in the field working at institutes as much of the time as he will have to spare in this will allow, and all fanciers are looking for greater progress in the next few years when it comes to an extending of the gospel of more and better laying hens and fowls that will make the most meat for the least amount of feed.

During the past five years there has been greater advancement made in bringing the attention of the farmers of that state to the advantages of better bred fowls than there was during the twenty years previous. This is not a mere idle statement, but comes from men who have given a lot of their time to the cause of better fowls and then watching the uplift that has gone through the commonwealth so speedily and thoroughly. Missouri is of real Who's Who caliber. They are not busy with other affairs than their own and their offer of producing a hundred new members for the next annual meeting of the A. P. A. at St. Louis will be more than made good. There is a live bunch of fanciers down there to draw upon, and though the branch that has its headquarters in that state is a very live one, you just watch the dust that flies if she is elected to be the meeting place for the A. P. A. in nineteen-ten.

Take your fowls to the coming show and find out how you can improve your stock.

Ship all your mongrel fowls and invest your money in full-blooded stock.

taken, and especially is this so of the smaller yards of the smaller plants, and to such poultrymen I would say, "Get busy and keep busy; clean up, clean out and keep clean." The poultry business is no place for a lazy man or a loafer, for you can only make a success by continually keeping at it and looking after the little things.

I have long since learned that in order to have a healthy flock you must among other things have healthful surroundings, such as yards and houses.

The smaller yards, especially the "back lotters," should have an occasional scraping and remove all accumulation, after which lime should be scattered over the yard and a solution of petroleum sprinkled over the entire yard. Thus you will sweeten the ground and kill and prevent gapes, cholera, etc. Then, too, the drinking utensils should be scalded out often and painted with penoleum inside and out; and by the way, for those not acquainted with penoleum I would say you will find it advertised in the columns of American Poultry Journal, which in itself is a recommendation.

One very important thing a majority of breeders overlook is the removal of the droppings. The droppings should be cleaned out every morning and at least three times per week by all means. How can you expect a hen to be healthy and lay eggs when she is compelled to breathe the disagreeable fumes from the droppings for ten to sixteen hours?

Another important thing from a sanitary standpoint is the housing of the fowls. I have for a long time used and advocated the use of an open front house, in which the birds should be placed in proper numbers. I care not whether the house be one of the colony kind or a long continuous house, but I do want it in sections holding not to exceed fifty birds and an open front in each section.

The house I am using and prefer is in 10x20-foot sections, with an opening in the south front 3x7 feet, with curtain to

drop in stormy weather, and such house will hold fifty birds. In this house I place my dropping board along the north wall, making it 7 feet wide and 20 feet long and 2 feet 6 inches above the floor, and in front of the board suspended from ceiling I have a drop curtain which is put down in zero weather and I never have a single comb frozen, and in this

White Plymouth Rock. One of the long bodied kind. A great layer. Bred and owned by H. W. Halbach, Waterford, Wis.

open front curtain house there is always plenty of oxygen, on which chickens thrive.

The floor is covered with deep litter, in which all grain is fed, and exercise makes health and thus you have a scratching shed and house all in one.

Now comes the battle against lice and mites and it is a well known fact that lice and mites are the cause of more disease and death than any of all other insanitary conditions.

I have tried almost all powders, lice paints and anti-lice perches ever brought to my notice and all without success until I installed the one made by the National Medicated Perch Company, of Fairmount, Neb., which I am now using with complete satisfaction, and I am convinced that no matter whether a man raises ten chickens or ten thousand he cannot afford to fool with common perches.

The perch I am using is strictly a sanitary perch and one in which you are sure a mite cannot reach the chicken, as the perch is supported on trusses, whereby it becomes necessary for a mite to go through a cup of fluid before reaching the perch, and it being death to mites they never reach the perch; then the perch itself, being grooved (the groove then being covered with a strip), the groove being filled with a fluid which is continually evaporating, thus permeating the feathers, it kills all the lice on the chickens, as I have demonstrated, by placing a chicken having lice on the roost at night, finding dead lice on dropping board in the morning and the hen free of lice.

To those not using this roost I would urge them to investigate it and while waiting the adoption of some I would suggest you paint your old perches and spray your walls with crude carbolic acid, which you can get for about seventy-five cents per gallon.

I do not like to whitewash for various reasons, but if you must use it then do so after having placed crude carbolic acid in it.

A whitewash is only good for a short time, while a volatile fluid such as is used in the National perch continues to fill the air with its fumes, which are death to lice but delightful to chickens.

Another important point for prevention of disease is the

removal from the flock of all sick birds. No matter what the ailment, the bird should at once be removed to different quarters, thus protecting the well birds as well as giving the afflicted one a better chance for its life.

I trust I have made myself clear on the proper way to have a sanitary condition, for it is a delight to be able to help the one just starting to get started right, and it was a pleasure to me to answer over four hundred letters as a result of my article in August American Poultry Journal on "Diseases of Poultry," for they were mostly from people of limited experience. It also showed that American Poultry Journal is widely read, for the letters came from almost every state as well as some foreign, and I shall take pleasure at an early date in complying with numerous requests for an article in American Poultry Journal on the proper feeding of poultry for eggs and health.

—o—

Whenever a bird soils its plumage it should be washed. All white birds should be washed several times, as this adds to their appearance greatly. The birds should first be thoroughly washed in lukewarm water and then be rinsed in bluing water. Next press out all the water in the feathers and remove the bird to a clean coop. Place shavings on the floor so that the bird cannot soil its feathers.

The early molters are the best show birds because they finish the process by November and are then ready for conditioning, while the late molters will not be ready until December, when it is almost too late for conditioning for most shows. Where young stock are to be exhibited they should be hatched not later than the middle of April.

The birds in the show room will tell what care you have given them. If they have had your best attention they will show it. Notwithstanding the fact that it only requires about

CHARLES NIXON, WASHINGTON, NEW JERSEY, Breeder of White Wyandottes for 17 years, and licensed judge of the American classes.

six weeks to condition the birds, yet if they have not had the best of care earlier in the season no amount of conditioning will make them fit for the show room.

Get your hens as fat as pigs and then have eggs—to buy.

PRIZE ARTICLE DEPARTMENT

We would like to have all of our readers compete for the prizes offered each month in this department. Send as many articles each month as you desire. For the best article we will pay \$3.00 and for the second best \$2.00. Make your communications about a column in length, which is about 600 words. They should be timely and appropriate to the season. Articles describing appliances and houses and accompanied by rough drawings are especially desirable. All the communications must be accompanied by a letter stating that they have been sent in for competition in the Prize Article Department. All articles must be written on one side of the paper only. Articles received after the 15th of the month will be too late for competition in the month following, but will be entered the next month. No manuscript will be returned, but all who send meritorious articles will be given a year's subscription to AMERICAN POULTRY JOURNAL, whether the article is published or not.

The first prize in the contest this month has been awarded to Mary S. Andrews, Farina, Ill., and the second prize to Chas. H. Wagener, Fullersburg, Ill.

BUYING MALE BIRDS IN THE FALL.

BREEDERS and farmers who buy cockerels to improve their flocks usually wait until winter or spring before purchasing them. There are a number of reasons why it is better to buy them in the fall. One can buy a much better bird in the early fall when the breeder's yards are full than he can get for the same money later in the season after the birds have been sorted over and the best ones taken out. And, too, a breeder who has sheltered and fed his birds through the winter cannot afford to sell at the same price he could in the fall.

Another reason is that birds shipped in the cold weather are more likely to contract colds than if shipped in mild weather. Sometimes in a sudden cold spell the birds have combs frozen in shipment; and sometimes the weather is so cold that birds cannot safely be shipped at the time the purchaser wants them. So much for the price and the weather. The results in the breeding pen are of even greater importance. If two or more male birds are to be kept together in the same pen it is necessary that they become acquainted before the breeding season commences, as they will do less fighting.

If procured before the breeding season, the cockerel can be watched and if not entirely satisfactory can be replaced by another one without delaying the hatching time. The breeding pens should be selected and mated early enough so that its members will all become acquainted and be on friendly terms before eggs are to be saved for hatching, as eggs will be more fertile if hens are happy and contented. Some think that hens that are contented will produce a larger proportion of pullets than hens that are uncomfortable and unhappy. If the male bird is wild he should be petted and tamed before the breeding season. If he lacks size, much can be done by special care and feeding to increase his size, if commenced early in the fall. The breeder who has a large number of birds cannot give special care to each one. That is a very important reason for buying birds early, that they may receive special care and develop into finer specimens than if allowed to run all winter in a large flock. Cockerels are much better if brought up without the society of hens or pullets until time to place them in the breeding pens. If purchased early you can be sure that this is done, and you may also be sure that it will result in eggs with more fertility and chicks with stronger vitality than if the male bird be allowed to associate with hens from maturity until breeding time.

If birds are too fat at breeding time, eggs will be lacking in fertility and chicks will lack vitality, which is another reason for selecting birds early so that one may control the feeding and management of them before the breeding season.

Another reason which applies to white birds is that the plumage of white fowls is sometimes made brassy or stained

by storms and autumn sunshine, which can be avoided by careful attention to shelter and shade, unless the brass may be produced by some other cause.

If those who intend to buy male birds would consider these reasons and others which may occur to them it seems that they would prefer to buy them in the fall, or at least try it and see if it were not a more satisfactory plan than buying in winter or spring.

Farina, Ill.

MARY S. ANDREWS.

PREPARING BIRDS FOR THE SHOW ROOM.

OUTLOOK for the show season this fall is very promising and it will well pay any poultryman to start now to condition his birds. Every poultry journal is filled with announcements of the coming shows and from the present conditions this year will

mark a new era in the poultry industry. Of course, as usual, there will be hot competition and so every poultryman should do his utmost to have his birds in the best shape possible by show time. The first prize is oftentimes won by a half point, and as extra care easily makes the birds score three or four points more, we will leave it to the reader if too much care can be bestowed on show birds. The first step should be to pick out all promising birds and place them in pens by themselves. This should be done fully six weeks before show time. Only birds should be selected that have good eyes and combs and they also should be standard in shape, color and weight. It must be remembered that the other fellow will have some pretty good fowls and to surpass him you must have first-class stock to condition.

Having selected the promising birds, you should next commence to bestow your best care on them. Give them a clean yard, where they will have plenty of shade and also shelter from the rains. Keep the poultry house clean and have clean straw on the floor. The house should be well ventilated and by all means large enough to accommodate the fowls. The runs should be kept clean so that the birds cannot soil their plumage.

Nothing but good sound grain should be fed at all times. Keep the water basin filled with fresh water and don't forget the grit box. Confined birds should have plenty of green feed. Don't forget the lice. Remember that they are always working and in a very short time can ruin a fowl's chances for success in the show room. When the fowls have access to a box of road dust they can keep free from lice and mites.

The birds should be kept very tame. No matter how wild a fowl may be if he is handled carefully and sees that you mean no harm to him, he will become very tame at last and may be picked up at any time. Even if your bird is in very good condition he will have no show in the exhibition room if he acts wild when the visitors look at him.

The birds should be confined in coops three or four days before they are shipped, so that they will be used to confinement by show time. Notwithstanding the fact that a bird is very tame, if he is not used to confinement he will act wild and thus his chances for success in the show room are blasted.

Before the birds are shipped one should go over each bird's plumage and pick out all broken and irregular feathers. The birds' legs should be polished with sperm oil. This will give them a rich, glossy appearance. In case the owner of the birds must furnish the coops, he should use first-class coops. They should be clean and also large enough so that the fowl has plenty of room. The bottom should be covered with a layer of clean straw.

Subscription 50 Cents a Year—5 Cents a Copy of all Newsdealers. Chicago subscriptions 60 cents (when delivered by carriers). Foreign subscriptions \$1.00. Canadian subscriptions, 75 cents.

Look at the date upon your wrapper. Many subscribers write to ask when their subscription expires and many complain because we discontinue sending the JOURNAL at the expiration of time for which it is paid. The date when your subscription expires is found on the wrapper each month.

AMERICAN POULTRY JOURNAL is the oldest poultry paper in America. It has a national and world-wide circulation. The best writers on poultry matters contribute to its columns. It receives the patronage and endorsement of the foremost representative breeders of standard poultry and manufacturers of poultry appliances in the country.

Advertising rates are sent upon request.

Notary Public.

OUR GUARANTEE.

We guarantee our subscribers against loss due to fraudulent misrepresentation in any display advertisement appearing in the American Poultry Journal, providing the subscriber when ordering the fowls or merchandise states that the advertisement was seen in the American Poultry Journal, and places the order during the month or months in which the ad is inserted in our columns and notifies us of the fraudulent misrepresentation of the advertiser, giving full particulars, as soon as it occurs.

We Lead, Others Follow

Since the first issue of American Poultry Journal, in 1874, it has blazed the way for other poultry journals to follow, always being the leader in everything pertaining to the poultry industry.

American Poultry Journal was the first poultry magazine to publish colored illustrations of poultry; the first to publish line-drawings from the pen of the well-known artists, Franklane L. Sewell, the late B. N. Pierce and Henry T. Lee; the first to adopt halftone illustrations; also the first to publish a weekly and daily poultry paper; the first to adopt the name "American"; in fact, has been and is today first in

everything that has or will be of interest and benefit to its readers.

All personalities are rigidly excluded from its columns; but friendly controversies are always welcomed, providing the controversies tend to enlighten our readers on the subject in which they are interested—poultry.

It takes years of hard labor and an expenditure of a vast amount of money to put a poultry magazine where each issue is eagerly looked for by its subscribers and where the advertiser can safely invest his money for advertising space. This is the proud position in which American Poultry Journal is today.

The inexperienced advertiser sometimes questions the advisability of paying the rates asked for space in our columns, saying that he can get space so much cheaper in this paper or that paper; but he does not stop to consider that the American Poultry Journal is the oldest and best poultry journal in the world, and that its readers have confidence in it and in its advertisers, and therefore will place their order with those who advertise in its columns much more readily than they will with the advertiser who places his ad in a new or cheaper publication.

We guarantee an average monthly circulation of 60,000 copies; but our circulation is increasing so rapidly that this month we had to make our order 65,000 copies, and believe that before the first of the year it will be up to 70,000 copies per month. Our advertisers are going to get the benefit of this increased circulation, therefore is there any reason why an advertiser should experiment with new and untried publications when he can get full value for his money in the old reliable American Poultry Journal?

Crop Short—Order Early

Generally speaking there will not be the chick crop that was expected this season. Retarding weather the past spring and heavy demands for eggs for hatching just at the time breeders wanted them most for themselves as well as the high price of feed making some breeders curtail somewhat their crop's quantity and that of foregoing seasons. We know several breeders who said they had not bred on quite so extensive scales the past spring owing to high feed and increased cost of rearing. They will ask more for the chicks they raise because they have bred from higher average matings than formerly and the cost of rearing demands more remuneration for the investment.

There is no getting around the fact that prices for really good birds have been too low. The day of dollar birds is gone. It costs from two dollars up to place birds in the shipping coops, advertising, feed, time, investment, coops, included. Higher quality is what we are all after. We want to breed better stuff this coming spring than we ever have before and the one way to do it is to cut the matings in two. We know one breeder who has been doing this for a few seasons, owing to his limited quarters and the gradually increasing cost of growing chicks and his flocks show it. From a clutch of seventeen cockerels we saw on his place this fall there were but two or three that would be doubtfully valued at less than five dollars, and he had

"souped" but one from the bunch before we saw them.

Buyers who want to get the best of the spring's crop had better begin looking about now. It is none too early to place orders for show stuff to be delivered in December and January, and if you are wanting something to strengthen your string for the November shows better get it in line now. This winter is going to witness a great revival of stock business, as those of us who are short in stock will sell close and buy better if we can find it. Get the birds you need in line soon, or else the other fellow will have them ahead of you.

Time and Labor-Savers

The appliances that each fancier has at hand to make his work lighter add much to the pleasure of keeping poultry and on large plants they have much to do with the profits insofar as they affect the matter of labor. Not long since we visited the home of a breeder who lives on one of the many inter-urban lines of the Central West, who had a bone-cutter, clover-cutter, small mill for cracking corn and wheat and making ground feed for both his horse and cow. The feed bins and the grain and grit were all handily arranged in the feed and power-house. The time it took to do the work about the power-house was nothing more than to fill the bone-cutter hopper with bone and turn on the electricity, while he went on about other chores. A couple of bushels of grain could be dumped into the hopper of the feed mill and the motor would put it through while other work was being done.

This man had not much time for his fowls, but his hens had paid well for their care and feeding and by watching his chance he had secured this outfit at very little more than it would have been worth as junk, it being second-handed yet stout and good enough to do for an indefinite term of years. The whole thing had cost less than a hundred dollars.

In the matter of houses and coops there is a great deal of time to be saved if these are handily arranged. If the feeding and watering may be done with the least possible labor then the number of fowls kept can be increased to the amount of time one has for caring for them. The majority of practical poultry keepers and a great many fanciers have only a certain amount of time to devote to the hens' care and these spare moments must be so arranged that they will do for the work at hand. Labor-saving appliances and conveniences in the construction of poultry houses should be kept in mind when remodeling or building anew.

The Fairs

The passing fair season has shown us that there is great interest in more and better fowls. This season the Mid-West fairs have been better in numbers and quality of stock than formerly, and though there have not been a big number of the owners of exhibition stock at these events they evidently were wide awake and doing what they could to further the general awakening. The problem of how to sell the cheaper birds at a profit and still give buyers

of them value for the amount they spend with one, is partly solved at the big fairs and sectional exhibitions of fowls that are held with the county or tri-county agricultural meetings.

Buyers who meet the breeders at such poultry shows are usually wanting to found Standard-bred flocks for utility purposes and do not want the top quality. They will come to the top kind if they are fanciers long enough. Surplus males are usually easily sold at the smaller shows of this kind and even the winter county shows where the buyers can attend.

Winning at the fairs generally point to the men who have been most successful in getting out the best early birds and are some criterion showing where to go to get birds for winnings at later fairs or early fall shows. To the beginner the fairs are good training schools in showing. They can pick up many suggestions of value and learn how to care for their birds while the show is in progress, getting some idea as well of the way a bird should best be put down before a judge.

Poultry Insurance

Those British are always doing something different. There must have been some demand for the insuring of poultry against certain losses and deaths, so the Lloyds come to the front and take wagers that your chickens will not be seized by foxes, theft, burglary, storms, floods, violent death by accident, fire, death while in transit to the shows, loss from fire or robbery while at shows, etc.

The insurance of a breeding and show bird for the period of one year, said bird being worth say, sixty dollars, would be two dollars. If a bird was constantly being shown this would be cheap insurance. Pigeons, dogs, cats, cage birds, are taken also by Lloyds. Feathered Life, one of the leading English journals, is taking what it terms proposals from fanciers who want insurance and they are doing a brisk business. We suppose they are acting for the Lloyds, the name they use to back up their advertising.

We have live stock insurance companies in America which insure high-class stock of all kinds, but it must be four-footed. In time there will be more of a demand for poultry insurance and then some company will rise to fill the niche.

The Grand Old Brahma

Once we heard a very prominent judge declare at a meeting of breeders that the one thing that contributed to the downfall of the Brahma was its "Cochinizing." He made this statement in the open and laid himself liable to criticism from Brahma breeders as well as those who did not agree with the cause of the Brahma's standstill. Many admit that the Brahma is not quite so popular as it was some ten years ago. Perhaps one of the reasons is that it did not continue to attract new breeders and fanciers owing to the great amount of energy put into the newer and more general-purpose fowls.

There may be as many Brahma breeders today as there were a few years ago, but there would not appear to be as many as the advertisers who are following the trail of the American

class far outnumber all others and consequently hide all the lesser lights of hendom. The Standard does not call for any particular Cochinizing of the Brahma. There has been a tendency, however, to breed Brahmas along more compact lines than they have been bred. In England the breeders of this fowl have even gone so far that they are now breeding cushions on the backs of the females, and winners at the leading exhibitions, in males, all show that they would breed more or less cushion in their female offspring.

We have been closely watching the Asiatics through the English journals and have noted from time to time, as the best illustrations of the breed appeared, that they were being shortened in body and bred more for heavy foot and leg feathering. One of these journals recently stated that the Dark Brahmas were far more popular than the Lights, though they were infinitely harder to breed to perfection. The Brahma is a grand fowl and it is said that once a Brahma breeder, always a fancier of them. They have enough merit to make them worthy of more general keeping. It may be well to state in passing that none of the Asiatics are as popular as they once were in England. The demand for the lighter bird of general purpose and early maturity has been steadily growing and not even the once muchly bred Langshan is getting the attention it deserves.

Make the Shows

Another season of shows will find some exhibitors dropping out, new making their debuts, and others deciding whether or not they will show again at certain exhibitions. Primarily showing at the poultry exhibitions is for the purpose of letting others know you are in the business. Secondly the higher up in the awards one can get the greater the publicity he receives from the showing. Most of the advertising we have in poultry journals is based on the showings we have made and the winnings, to let others who were not at the show know how high our stock stands when compared to what was shown against us. The keener the competition the more valuable are the awards we receive and consequently the greater the advertising value from them.

There never was a time when it did not pay to show good birds. Neither has there ever been a more appropriate time to show them than the coming winter. To the victor belong the spoils. This season if the crop of chicks has been good with you, get your best birds to the largest shows and make some winnings that will be a good foundation for your advertising. If you cannot attend the shows yourself send the birds anyway. You will not be under greater handicap than the other breeder who cannot attend with his!

Advertising Help

One thing that impresses the average successful advertiser who welcomes the ideas of the field representative is the repulse of the advertising solicitor by the breeder who needs his help most. None of us know all there is to be known about the advertising end of the breeding business. We are all

picking up useful hints from season to season and those of us who are getting the most out of the business are the ones who are putting time and money into advertising investments. We may be breeders of the best, but our enthusiasm wanes when we do not dispose of enough birds to make the enterprise carry itself along, and more.

Advertising is letting folks know what we have and then telling them what we can send them for a certain amount of money. We would include the art of securing orders in advertising, for everything is advertising the adaptability of your stock to the prospective buyer's needs that is needed to make the sale. Breeders should all make provision for letting their lights shine. They cannot remain in only local prominence and get that share of business that they are entitled to.

Many sales are made for the breeder who is advertising, through the medium of the field representative, for he is well acquainted with many buyers who come to him direct wanting to know where to find stock of certain description. He is in position to direct those who apply owing to his knowledge of the field. Further, in the handling of advertising and the getting up of booklets he has seen the best and most efficient methods and will be glad to help the breeders. Give the field man a chance to help you.

Lure of the Small Farm

Every man who once was next the soil and knew what a healthy tired feeling was, but who is now more or less engrossed in his business, longs to get back to the land. There is a larger movement back to the land today than ever. It is a daily occurrence to read of some man who has had his fill of desk work and money grubbing, who releases himself from the bonds and takes to the simple ways of living. Go to any poultry show in the land and talk with ten men who are in to see the show but who are not located to rear chickens, being busy with business and other cares, and they will say that soon they intend to leave the business to others and get a little place where they can raise chickens and garden stuff. We have heard this so many times that we cannot recall even a few of the best instances. Man is always more or less of an optimist and longs for things that he will attain in the end, if his work is rightly directed.

Poultry farms are good investments. They never take wings and sail off nor can they be moved without a great deal of inconvenience. It is mighty stony ground that will not raise chickens, and a poor farm, no matter how small, that will not make a good living for one who carefully tends it. No one can be more independent than the small landholder. His meat and eggs and milk and garden "sass" are enough for good living. There is always something to sell and the taxes are lighter than those of city property.

Three years ago there was a greenhorn left his city office and sold the home place, investing the money in a small twenty acre farm. Berries and apples, peaches and sweet corn, poultry and squabs, butter and eggs, table poultry and a bit of veal all contributed to the table, and though this man was not keen enough at first to make the

ends meet without stretching (and "lap over a little") he is gradually acquiring that knack and will soon be doing as well as one who spent a lifetime at the work. All things, even chicken and farming knowledge, come to him who works and waits.

Apropos Heavy Layers

Heavy laying is something we are all more or less interested in. We read all that is written on the heavy laying hen and look for more. Then we follow the records of the laying competitions in all parts of the world and

to go on the market offering a strain of layers that will do this. Strains are built up after years of effort. The Australian government laying contests have taught that very few flocks have been so far perfected that they may be called strains and depended upon to lay as well as the few best ones from which the flock was founded. Breeders of years of experience have not been able to keep up their records as producers of the best heavy layers. If they were at the top one or two seasons they were sure to fall back again to lower positions. The men who are putting conscientious effort into the breeding of good layers are having their

proach anything like the records they are claimed to have made for their breeder. There is something in the man behind the feed pail.

Good Illustrations

There is a lack of good illustrations in the advertising of a majority of the fanciers and breeders in this country. Nothing so enhances good advertising as good illustrations to back up the text matter. Small advertisements are enhanced by small half-tones or drawings that are appropriate. The average breeder has very few good photos of his birds because he cannot get good work done by his home photographer and thinks he cannot afford to have a professional come to his place and get them there.

Generally the home photographer will try to get good photos for the breeder if the breeder will show him the kind of work he wants done. It is not a hard task to pose a bird of the American class if he has had a little handling and been cooped a while. Usually there is some show that the breeder can ship to and make an exhibit at, where there will be a photographer who can get the best sort of a photo. Our Mr. Stahmer will be at the leading shows of the central west this season and can get good photos of your birds if you will entrust this to him.

If you are in need of good work at reasonable prices drop a line to Mr. Stahmer, care of the American Poultry Journal office, and he will let you know at what shows it will be convenient for him to handle your birds. If you have something good in the way of birds then you should be getting the most out of them. Good illustrations for your stock and egg circulars and catalogs will bring you double the amount of business than the same printed matter without them. Ask any breeder who is using illustrations of the down-to-the-minute sort whether he would easily be induced to continue his advertising matter without them! They are essential and he knows it. He has been through the mill of experience and knows what pays and what does not pay in the way of getting out publicity matter.

IMPORTANT NOTICE TO CHICAGO SUBSCRIBERS.

On September 1, 1909, the renumbering of streets in Chicago will be in effect according to ordinance passed by the Chicago city council. In order to correct our mailing list and have this publication going through the mails to subscribers in Chicago properly addressed the publisher asks you to kindly cut out the following form and after answering the questions appearing thereon to mail it under cover of envelope sealed, postage prepaid (two cents):

American Poultry Journal,
358 Dearborn St., Chicago, Ill.

New street and number.

.....
Old street and number.

W. E. STANFIELD ADDED TO THE AMERICAN POULTRY JOURNAL STAFF.

Again this month we are pleased to make mention of another addition to our working force. W. E. Stanfield comes with the American Poultry Journal. Mr. Stanfield is too well and favorably known to the poultry world in general to need much introduction, having for a number of years been closely identified with the poultry press and being a judge and breeder of considerable note as well, and in adding Mr. Stanfield to our staff we feel safe in saying that he, together

with our already competent force, make up a list of men that stand unequalled in being able to bring together the best there is for the readers of a poultry journal. Practical men, and with knowledge gained along the line of poultry culture through actual working contact and personal experience.

Mr. Stanfield will make field observations in the interests of our advertisers through the mid west territory, assisting our Mr. Zimmer, it being impossible for him to cover it all; also do some work in the east as well, besides furnishing good material for the columns of the American. Mr. Stanfield's home address is Hillsdale, Mich., Brookdale Farm.

finally cast our eyes upon the claims of American poultrymen who have three hundred egg strain flocks, two hundred and fifty egg strain flocks and egg strain flocks of lesser light. Claims that are far fetched do not help the real workers for better egg yields.

Because a man has a few hens or pullets that have laid two hundred and ten eggs per year does not entitle him

innings now, for there is more interest in heavy layers than ever before.

It might also be well to point out that a hen will do more in the way of laying for one feeder than she will for another. At present there is a strain of heavy laying White Rocks in the hands of an experiment station where the most approved methods are followed out, but the birds cannot ap-

CHICK' CHATS

This department is open to all readers and advertisers in the eastern territory and all are invited to send in all poultry news items that come to their attention. Address H. P. Schwab, eastern representative, Irondequoit, N. Y.

Buffalo next.

September—"The Fair" month.

The patronizing ad doesn't get patronage.

From the birds we have seen at the exhibits so far this season we are assured that our prediction made some time ago that this would be a quality year is to be fulfilled.

There's no advertising force like the force of facts.

Jonas Hayner by name. But no Jonah in fact or by nature. His win at the State Fair was richly deserved. For years Mr. Hayner has been breeding and making the rounds of our best shows. He has stuck, and now can well claim the reward due.

That first prize Owen Farms Barred Rock hen at the State Fair carries the earmarks of future doings right with her. Her ideal shape, with clean-cut barring and a shade of color seen so far on but very few specimens make her one of the most desirable kind.

An unplaced and rather immature pullet of theirs also promises much for the future. The clean yellow legs of this line are a notable feature.

The New York State branch meeting of the A. P. A. will be held in connection with the Buffalo show, the week of January 25 to 29, 1910.

The executive committee met at the State Fair and so voted. While we congratulate Buffalo we also wish to congratulate the A. P. A. on its choice. Buffalo can surely give every promise of a great show, the attendance and support given by the public warrant this. It is also a well known fact that Buffalo awards carry with them valuable advertising. We hope to meet a good share of our friends there. For further particulars write the secretary, C. J. Standart, 399 Brisbane building.

In securing this meeting Buffalo has won a signal victory. There delegates to the Syracuse meeting were Messrs. J. Thomas Harp and Dr. S. A. Merkley. They came with the goods and buttons. Buffalo has also invited the A. P. A. to hold their annual meeting next year, and when we consider location, with railroad facilities and weather conditions, their claim looks good to us. Bear this in mind, "Buffalo next."

An attractive letter design will help you in many ways. They carry tone with them. Write the A. P. J. for samples and estimates.

Have YOU asked your neighbor to subscribe for the A. P. J.? Do this for better poultry's sake.

Tell the straight truth and tamp it down with reason.

Don't stint and hint. Use paper enough to tell your story fully.

I thought a thought, but another thought

From my mind the first did chase; Now my second thought has flown the coop—

But I've filled four lines of space.

We want representatives at all the poultry shows this winter. There are opportunities at every show for some one, and the hustler will get them. The A. P. J. offers most liberal inducements. Write for conditions today.

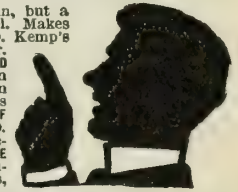

Be ready to expect anything, these postcard days.

Irving F. Rice, Cortland, N. Y., the well known breeder of S. C. White Leghorns, spent a day at the fair. He reports 900 chicks growing nicely and is well pleased with the quality. We have known Mr. Rice for a great many years as a careful breeder and consider him one of the leaders in this variety. Mr. Rice is also well known as a judge, his work at the last New York show received most favorable comment.

Something that should come to the advertiser who waits is a strong push.

SPECIAL FOOD for laying hens (not sprouted grain, but a REAL FOOD) 12 to 17 cents a bushel. Makes hens lay in winter same as spring. Sixteen of Prof. O. Kemp's Barred Rocks fed this food laid 3,538 eggs in one year. Hundreds report equal success. **FIRELESS HATCHERIES AND BROODERS** 24 to 30 cents each. None better. Thousands in use. **FOOD-SAVING FEEDING HOPPERS** 14 cents each. Keep food clean and dry, prevents all waste. **ONE-PIECE WATER FOUNTAINS** 8 cents each. No dirty water, no wet chicks. **RAT AND STORM-PROOF COOPS** 20 cents; safe, warm and clean. One plant using 470. **HEN-PROTECTING NESTS.** Self-acting, simple and cheap. Prevent egg eating and egg breaking. **DEAD-SHOT LICE AND MITE KILLER** 4 cents a gallon. A sure killer. Over 60,000 gallons used last year. See my **FREE Booklet**. Address,

F. GRUNDY, POULTRY EXPERT, . . . MORRISONVILLE, ILLINOIS.

SILVER-LACED WYANDOTTES

Last year our birds won at Michigan's leading shows, not losing a place at the State Show at Detroit and scoring from 93½ to 95 under such judges as Tucker, McClave and Mullinix. They have started this year by winning all prizes offered at the West Michigan State Fair. If you wish winners for the winter shows we can supply you.

ORPINGTONS

Golden Nugget Strain

This superior stock is in demand because of the heavy bone, golden buff color and perfect Orpington shape. At every show I exhibited last season my stock won prizes. I have some early young stock of both sexes for sale that will make a show record.

D. W. BOYDSTON, NEVADA, IOWA

We want agents. Write for terms. Our commissions are long and you can improve your spare time and conditions by taking subscriptions for the A. P. J. Have you asked your neighbor to subscribe?

The Hall Mammoth Incubator Company, South Columbia, N. Y., had an attractive and interesting display at the State Fair. We saw two of the Mammoth machines in successful operation with a capacity of 12,000 eggs at the Pittsfield Poultry Farm at Pittsfield, Me. For a large plant where results are an object and labor an item, we surely would advise the use of these goods.

Advertise your show. The A. P. J. show poster is up to date, with a strong power for pull.

We are informed that E. T. De Graff has filed an appeal from the action of the A. P. A. executive committee in ex-

"VALENTINE."

First prize R. C. R. I. Red Cockerel Indiana State Fair, 1909. Hatched February 14. Weight 7½. Bred and owned by C. L. Buschman, Indianapolis, Ind.

pulling him from membership. This will bring the case before the next general meeting for final action. So far we only have the report as printed in one of the poultry papers, made by one of the members of the board.

We are not a fault-finding set. But we do want to express the opinion that the records of the executive committee should either be held for the official report or that they be given to all the publishers at the same time, both for reference and the privilege of publishing same.

The A. P. J. stands for right to all, and we were only prevented from publishing the facts in this case as presented by the absence of this matter. This will be rather stale news by the time we and other papers are favored with the report.

From latest reports F. L. Sewell is still improving.

We have the Decimal Score card argument made by Mr. D. J. Lambert at the A. P. A. meeting, and hope to print

UNION LOCK POULTRY FENCE has 1½x3-inch meshes at bottom. All the long wires are cabled, giving the maximum of strength and enabling the fence to be properly stretched. Write for catalog, and also ask about Ranger Barb Wire.

it in this or the next issue. The Score Card question is one that will not down at this time. So while the breeders insist on the Score Card they also should have the privilege of choosing the card they wish. This is not saying that the Decimal card should be recognized by the A. P. A. The fact is, we would oppose such action, as it is not consistent with our fundamental principles of valuation of the different sections. If we were to choose between the two, we would surely prefer the regular A. P. A. card, still we think enough of Fair Play to respect the wishes of those that think otherwise.

One of the original breeders of Barred Plymouth Rocks, Mr. L. J. Bundy, of Silver Springs, N. Y., informs by letter with an invitation to call, that this year his stock promises better than ever before. Mr. Bundy was one of the very first to take up this variety some 30 or more years ago and from that day to this has been one of their best champions. Years ago he was one of the most successful New York exhibitors, and while we now find his birds there and at other shows nearly every year, he has let up and satisfies himself in breeding his share of good ones and supplying a host of friends and breeders that have been his for years with choice birds. We hope to call on him soon and then may have a little more history to give.

BARGAINS IN BUILDING MATERIAL.

On another page will be found an interesting advertisement which appears for the first time in The American Poultry Journal. The Central Machinery & Supply Co. have been in business for many years and are a reliable firm that sell all kinds of constructions and building supplies direct to the consumer at one small single profit above manufacturers' cost. In some lines they manufacture their own goods. This company makes a specialty of supplying poultrymen and farmers with just what they need in building material. They do business on the basis of "Your money back if not satisfied," as all goods purchased of them are guaranteed to be exactly as represented. Their catalog, which is fully illustrated, contains several hundred pages showing net prices and full descriptions of goods every poultryman is liable to need.

MR. JOE COLEMAN, CAREY, OHIO, REPRESENTING AMERICAN POULTRY JOURNAL.

In securing the services of Mr. Coleman to represent the American Poultry Journal as advertising solicitor we have secured a man of no little ability, both as a writer and advertising man. He was one of the founders of Poultry Record and has been in the employ of other poultry publications. He is a well-posted Journal man and a Specialty Orpington judge, has bred some of the best Black Orpingtons in the country and knows a good chicken when he sees one.

Joe, as he is known to the poultrymen, is a hustler, at the same time is conscientious and you can rely on what he tells you. For the present he will work in West Virginia, Pennsylvania and Ohio.

FEED ONCE A WEEK AND FEED BETTER.

The Nourse No Waste Poultry Feeder (patented) saves half the time, quarter the feed, increases health, growth, egg production and profit. Will pay for itself in a month and for years. Circ. Up to date successful feeding free THE H. A. NOURSE CO., W., 1111 Station, ST. PAUL, MINNESOTA.

WYANDOTTES

A Trip Through Ohio

Our Central Representative, Mr. C. W. Zimmer, Visits a Few of the Many Poultry Farms in Ohio and Tells Our Readers What He Found

COVERT'S BARRED ROCK FARM, WILLOUGHBY, OHIO.

ONE of the surprises of my recent trip in northern Ohio was the quality which I found in the Barred Rocks bred by Mr. Covert. We had heard before we reached the farm that we would find quality here, but what we saw really surprised us. It was simply wonderful to see the large number of clean cut, beautifully barred birds with yellow bills and legs, showing good Rock type and all extremely vigorous and healthy. Mr. Covert dotes on the narrow, snappy color in both males and females. He has been breeding Barred Rocks for the past twelve years and of late years has produced some cracker-jacks.

You can depend upon getting your money's worth from Mr. Covert, who says that it is always his aim to send his customers more than their money's worth. We know Mr. Covert to be very conscientious and we think you will be pleased with any order entrusted to him.

He had the nerve several years ago to pay high prices for good eggs and birds, realizing a pair of really good birds was worth more than a dozen ordinary ones. Therefore, he got a good start. His hen, which he calls "Highland Bell," a cut of which is shown in this issue, is a truly wonderful hen and her record as a winner and producer of winners is remarkable. We were able to pick out of the flock without any trouble a number of her daughters, which showed both color and type of their dam. We were also struck with the quality shown in the bird which headed first pen Cleveland, 1909, who was also at the head of Mr. Covert's best pen this year and was surely a wonder as a producer of quality. The fourth cock at Cleveland also headed a pen of cockerel mating and is the sire of some extremely promising youngsters. His other male was a son of a Madison Square Garden winner, so you see all of his birds are bred in the purple. He line breeds and pedigrees his birds and all his young stock is bred on free range and are very strong, vigorous, healthy specimens. We prophesy that many of the young birds now on his farm will be winners at many of the shows this coming season.

Mr. Covert is one of our advertisers and his ad will be found elsewhere in this issue.

H. C. & C. W. SIXT, WEST PARK, OHIO.

Breeders of Single Comb White Leghorns and White Wyandottes. Here we found a poultry plant that for neatness and cleanliness it would be hard to beat. It consists of 15 acres, which is devoted to poultry and the raising of the grain for their feed. Mr. Sixt puts in his entire time in caring for the birds and he is very much interested in his work.

The office into which we were shown is profusely decorated with the many ribbons which his stock has won and with many illustrations of his chosen varieties. Beyond the office we found a conditioning and training room with 30 coops, in

which all show birds are conditioned before being placed in the show room. Beneath the office is the incubator cellar, which is sufficiently large to accommodate 1,000 eggs at one hatching. There is ample brooder capacity in the same building on the east of the office. To the west of the office is a long, continuous house in which all of the old birds are carefully mated and yarded and every detail is constantly under the careful supervision of Mr. Sixt.

He informs us that he has been breeding for the past 15 years, which fact we did not doubt when we saw the quality found in his yards. The old birds were entirely free from brass and in extremely good plumage and the youngsters were white and no creamy, yellow birds in the flock.

Mr. Sixt makes a specialty of producing show birds and has been winning many of the coveted prizes for a number of years past at many shows, including the great Cleveland, Ohio, show, where they have won on both their White Wyandottes and S. C. White Leghorns. Among the many coveted prizes they won a handsome silver cup for the best display of Leghorns at Cleveland January, 1908, on a entry of 12 birds, 60 birds competing, also 1, 3 cockerel; 2, 3 pullet; 4, 5 hen and second pen.

At the Detroit Show, January, 1909, they won first cock, second hen and third cockerel.

At the Cleveland Show, January, 1909, they again won the silver cup for the best display of Leghorns, also first display, third and fifth cock, third cockerel, third pullet and third pen. They won on Wyandottes second pen and fifth cockerel.

At the Berea Show, February, 1909, they won the silver cup for the best display in the Mediterranean classes, and first, second and third cock, first, second, third and fourth hen, first and second cockerel, first and second pullet and first and second pen. On Wyandottes they won first and second cock, third hen, first and second cockerel, second and third pullet and first pen.

Their birds proved their quality by winning the silver challenge cup twice in succession at Cleveland Show, 1908 and 1909, for the best display of Leghorns, and this in two of the hottest classes of Leghorns that ever came together at Cleveland. This in addition to their previous winnings at Detroit and other shows, proves their superiority. Their Wyandottes are equally as good and they have the quality in either variety at a reasonable price.

They guarantee all stock to be entirely as represented and is returnable if not satisfactory. Therefore, you will run no risk in placing your order with Messrs. H. C. and C. W. Sixt. For further information, we refer you to their ad, which appears elsewhere in this issue.

SIMMONS & CRITTENDEN, GENEVA, OHIO.

Breeders of the Redskin strain of Rose Comb Rhode Island Reds, are ideally located on the edge of town, with eight and one-half acres devoted to their Reds.

The soil is gravelly, and being slightly rolling, is very suitable for poultry raising.

Mr. Simmons has been breeding Reds for some six years and has always taken an active part in Red affairs and in pushing the breed. His good works have been recognized and he was recently honored by being made election commissioner of the Rhode Island Red Club of America. He is also secretary-treasurer of the Ohio branch of the club.

In Mr. Crittenden, we found a thorough fancier and he has been breeding Reds for some seven years past. This combination of two enterprising young men is a good one and sure to win.

Their cock bird, "Buffalo Bill," which won first prize and champion color male at Buffalo, 1909, is certainly a wonderfully colored bird, also has good type and extremely good head points. He is the sire of a cockerel which we had the pleasure of handling, that has quality that should be able to win the first prize in the hottest kind of company. The dam of this bird is the remarkable hen, "Princess Minnie Ha-Ha," which was first prize and shape special pullet at Buffalo, 1909. This hen has held her color throughout the season and when we saw her in August, she was as rich in color as most any pullet, and has that extremely long body, with a long, level back and well spread black tail which pleases the eye of the Rhode Island Red fancier.

Their record at Buffalo, N. Y., February, 1909, in competition against some of the principal eastern breeders, is an enviable one and consists of 1, 2, 3 hen; 2, 3 cock; 1, 2, 4 cockerel; 1, 4 pullet, and 1 pen, shape special on female and color special on male, winning 14 ribbons on 15 birds, besides a handsome silver cut which was offered for the best cock, hen, cockerel and pullet, both single and rose combs, competing.

When you consider the class of birds exhibited at Buffalo, you will see that Messrs. Simmons & Crittenden must have the quality to have won these prizes. Many other prizes last year and for several years before have been carried home by the Redskin strain.

We found some 300 head of fine young birds and were shown birds and their dams and sires for several generations back. You will readily understand that with this kind of breeding back of them, that it is no wonder they are able to produce winners. Besides the flock of young birds, they have quite a number of fine yearling hens of especially good color and they are in a position to supply you show quality in either old or young stock. You will find their ad elsewhere in the columns of American Poultry Journal.

L. C. TAYLOR, GIBSONBURG, OHIO.

Mr. Taylor is an old-time fancier and has been breeding Blue Andalusians for the last nine years, always meeting with success. He has shown at many of the larger shows in Ohio, Indiana and Pennsylvania, always winning the cream of the prizes.

He has a small poultry plant, ideally arranged, with fruit trees growing and plenty of pure water from a well 400 feet deep. The past season he bred six pens of Blues and there was plenty of quality in evidence in his flock of young stock. Good station, long backs, well-carried tails, correct shape and color with nicely laced breasts, are to be found here.

Stock was all healthy and free from disease, showed plenty of vigor and stamina.

Mr. Taylor is a licensed poultry judge and has a number of engagements for this winter. You will find Mr. Taylor's ad regularly in the columns of American Poultry Journal, and if in need of high-class Blue Andalusians we would advise you to write him.

SYLVESTER SHIRLEY, PORT CLINTON, OHIO.

Mr. Shirley breeds nothing but the Silver Duck Wing Leghorn. He is the oldest breeder of this variety, having bred them for the last fourteen years. That he has good ones is stating it mildly, for we saw plenty of fine specimens free from brick and shafting, having elegant striped hackles and saddles in males and fine stippling in females. He has been winning on his birds at Chicago, Cleveland, Detroit, etc. Mr. Shirley's business has grown to such an extent that he has found it necessary to seek new quarters and he has purchased eight and one-half acres on the edge of town, upon which he is now preparing to move, and he will devote all of this to producing his favorite breed, the Silver Duck Wing Leghorn. He is in business to please his customers and you will be treated fair and square if you place your order with him. You will find his ad elsewhere in this issue.

GEORGE F. BUCK, PORT CLINTON, OHIO.

Mr. Buck is a breeder of S. C. Brown Leghorns, and has some very fine birds in old stock and a very promising flock of young birds, and he breeds both the cockerel and pullet matings, and has some young stock large enough for fall shows. His stock is all bred from America's leading strains and winners at the good shows. Mr. Buck is in business to stay and will treat you right, and if in need of Brown Leghorns, you should look up his ad elsewhere and correspond with him.

HERBERT H. KNAPP, TIRO, OHIO.

Mr. Knapp is a breeder of White Wyandottes. Being a thorough fancier, no specimen that has not good color and produces typical Wyandotte shape looks good to him. He showed a particularly fine pullet at the Ohio State Fair, which we were compelled to stop and admire. In a strong class of White Wyandottes at this fair he won first and second pullet and second pen. We are informed that the decision as to who was to have first pen was in question for some time in the judge's mind. Mr. Knapp finally lost first because one of the pullets in his pen was somewhat immature.

H. J. Shann, Painesville, Ohio, is a breeder of Single Comb Black Minorcas and is a member of the Minorca Club. Mr. Shann has been breeding Minorcas of quality for the last six years and been winning some of the coveted prizes at several different shows for a number of years. Last year, at the great Cleveland, Ohio, show, on three entries he won first pullet, fifth cockerel and second pen in a hot class in competition with the best Minorcas in the country. At several other shows he won the cream of the prizes, having birds scoring to 96½ points. He has a fine flock of some 150 birds bred direct from these winners, showing grand station and type, that cer-

tainly are a promising flock of young birds. Mr. Shann is a conscientious breeder and you may depend on being treated fairly with any order that you should decide to place with him. His ad will be found in the columns of American Poultry Journal.

R. A. Slaughter, Greentown, Ind., breeder of Single Comb Rhode Island Reds, starts his ad in this issue. That Mr. Slaughter has good quality is proven by the fact that on eight entries at Anderson, Ind., last January, he won eleven prizes, including specials, among which was special for best male in the show. At three county fairs, in strong competition, he won every first and second premium. He reports a fine flock of 50 cockerels bred from these winners, which he is offering for sale. He guarantees every bird to be just as represented, or money refunded. If in need of Single Comb Reds, you will do well to communicate with Mr. Slaughter.

H. F. Kennerk, Fort Wayne, Ind., is offering to close out his entire flock of Single Comb Black Orpingtons in his ad, which appears elsewhere in this issue. Mr. Kennerk has some exceedingly fine specimens in both old and young birds. His stock is all bred direct from Madison Square Garden winners and consists

of 20 hens, 13 cockerels and 45 head of young stock, mostly pullets. These birds are all in the pink of condition and will be sold at a sacrifice, and you will do well to communicate with him.

A man is judged by the company he keeps. So is an advertiser judged by the space he uses. The bigger your ad the more money the buyer will pay for the bird he wants. It's just as easy to sell a \$10 bird as a \$2 one. The buyer in each instance wants "something good." The only difference is the one is willing to pay more to get it.

It is not the man who never makes a mistake that gets ahead. (He never does anything.) But it's the man who profits by his mistakes and never makes the same one twice, that succeeds.

F. R. Clark, Bloomington, Ill., the well-known collie breeder, has recently issued a book on the common sense way of training and caring for collies. This book contains 24 pages and cover and tells all there is to know about training and caring for collies, and is worth ten times the price asked. By special arrangement with Mr. Clark we are enabled to offer this book and one year's subscription to American Poultry Journal for only 60 cents. If you want to know how to train your dog take advantage of this offer and secure a copy of this book. Address all orders to American Poultry Journal, 358 Dearborn street, Chicago, Ill.

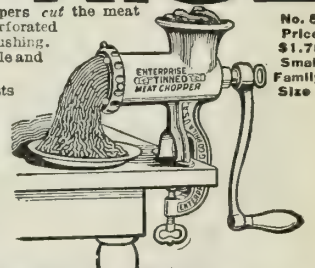

ENTERPRISE

Meat and Food Chopper

"Enterprise" Meat and Food Choppers cut the meat with a revolving steel knife against a perforated steel cutting plate without tearing or crushing. Easily cleaned. Practically unbreakable and will last for years.

The No. 5 "Enterprise" Chopper costs only \$1.75; No. 10, shown in cut, \$3.50. They are standard family size, and not only save half the work at butchering time, but are useful in the kitchen every day in the year.

Made in 45 sizes and styles for Hand, Steam and Electric Power. We also make cheaper Food Choppers, but recommend the above for the reasons given. Illustrated catalog free. Sold at Hardware and General Stores, etc.

THE ENTERPRISE MFG CO. of PA., Dept. 35 Philadelphia, Pa.

GOOD TO KNOW

By C.W. Zimmer

This department is open to all readers and advertisers in the central territory and they are invited to send in all poultry news items that come to their attention. Address C. W. Zimmer, central representative, Ft. Wayne, Ind.

We lead, others follow.

When in Cleveland, O., we called on G. E. Conkey Company, who report having done the largest business in their history during the past year, to which the American Poultry Journal contributed largely.

What's on your mind? Would you like to sell some chickens at fair prices? Then advertise in the American Poultry Journal.

That's it! Buy a Fishel White Rock male to head your flock and have some "quality birds" next year.

A man is judged by the company he keeps. Join us in the American Poultry Journal as a reader and advertiser and become one of "our folks." You know the American Poultry Journal is the oldest poultry journal in the world and has no superior. The fact that others are copying us is proof "We Lead."

WHITE P. ROCKS..

Blue Ribbon Winners. My White Rocks have been bred for ten years. Eggs from extra choice matings, \$3 per 15. Write for illustrated circular.

J. H. TROBAUGH DELPHI, INDIANA

WRITE TO-DAY FOR OUR '09 FREE SQUAB BOOK

Handsomely printed and illustrated, telling How To Make Money Breeding Squabs. (Our cloth-bound book now sent has 303 pages, 114 pictures, biggest and best we have ever issued. It's great.) See 1909 particulars and prices on Plymouth Rock Homers and Carneaux; ask for special offers all transportation charges prepaid. We were the first, the originators. Trade with us, get the benefit of our years of experience and skill. The greatest success of the 20th century in feathers. Read about it. Plymouth Rock Squab Co. 188 Howard St. Melrose, Mass.

Millions of squabs are now going into rich growing markets. From eggs to squabs in 4 weeks, then killed, weighing up to a pound. Read stories of customers who started small with our prolific pairs and now have big flocks.

If its a "good thing" you will find it in the American Poultry Journal.

Anything you "want to know" ask Zimmer.

H. C. Dipple, Indianapolis, Ind., one of the prominent poultry judges, has been appointed superintendent at the coming show. Mr. Dipple is a thorough fancier and will handle the office in a competent manner.

Mr. Dillon, of Dillon & Bell, attended the Ohio State Fair at Columbus in the interest of the Golden Wyandotte Club. They are prominent breeders of this variety.

We are informed Homer Slagle, of Poland, O., is the happy father of a bouncing baby boy. Mr. Slagle is a prominent breeder of Single Comb Reds.

H. C. Sheppard, the Ancona specialist, was in evidence at Columbus, O., State Fair.

Mr. D. M. Covert, of Willoughby, O., is laid up with lumbago. We trust Mr. Covert will have a speedy recovery and be able to exhibit his Barred Rocks this winter. He can put up a good string all right.

Dr. H. P. Clark, Indianapolis, Ind., is one of the oldest advertisers in the American Poultry Journal. The doctor says he has had an ad in our Journal continuously since 1881, and it is needless to say he has been satisfied with the returns. The doctor breeds thoroughbred games of the highest quality.

If you want to be well informed take a paper. Even a paper of pins will give you points and if you want "pointers" on poultry and kindred topics subscribe for the American Poultry Journal. It is the "best ever" along these lines.

Mr. L. G. Buell, Lorain, Ohio, breeder of S. C. Rhode Island Reds, has been

so successful he has found it necessary to enlarge his poultry plant. And he has purchased thirty acres north of Lorain, along the lake front. Only a few minutes ride from Lorain. Mr. Buell can place any shipment on the electric line right at his door and have it delivered to any express company, thus securing prompt and direct shipment. Mr. Buell won last year at Cleveland and reports a fine egg trade from his ad in A. P. J. and has a fine lot of youngsters coming on.

The Cleveland Plain Dealer says: Roanoke, Va., report comes from Montgomery, Va., that a woman living there gave birth to a child having wings. It must have been a poultryman's wife.

"Good to know" 65,000 copies of the American Poultry Journal for October. What do you know about that?

Success is the result of perseverance.

Time Is Money.

Time lost is money spent. Improve your time and you'll have money to lend. Of course you advertise in A. P. J.

What you do do, do well.

Nothing succeeds like success. To be successful advertise in A. P. J.

Keep everlastingly at it.

Two Eggs in One Day.

The writer has always doubted this statement, but when he absolutely knows one of his hens laid two eggs he has to believe it. These two eggs were both laid at one time, and not one in the morning and one in the afternoon, as is generally supposed in cases of this kind.

U. F. Fishel, breeder of "The Best in the World" White Rocks, of Hope, Ind., has purchased an auto.

Everybody works but father, he advertises in the A. P. J.

Perhaps you once tried some advertising and it did not pay. That doesn't prove anything. Some people have started on a railroad train and did not get there. Yet if you want to go some place you will make the attempt.

Man is the only animal who will kick when he has no cause to.

Lost opportunities are never advertised in the lost and found columns. But new opportunities are created by the right kind of advertising.

The man who doesn't advertise because "times are hard" is like the ostrich who buries its head in the sand to escape the hunter.

The ancient hen that laid the "golden egg" hadn't much to cackle about. Eggs were 40 cents a dozen all last winter.

Laugh and the world laughs with you. This adage holds good in advertising as well as elsewhere.

Compare rates in the A. P. J. with other journals and consider our circulation and you will advertise in American Poultry Journal.

Food That Makes Hens Lay

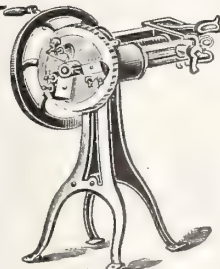

Other foods will make hens fat, but ground bone is the food for eggs. Nothing else will keep your hens at top notch egg production through the winter, when eggs are scarce. To secure greatest egg production, bone should be cut across the grain. The

Standard Bone Cutter

is the only machine which does this. Positive automatic feed. Cuts green or dry bone, meat and gristle. Cut shows No. 8 machine, price \$10.50. Eleven other sizes, hand or power.

Try it free for 10 days. Its superiority over the ordinary bone cutter will surprise you. Many improvements have been made on this cutter recently. Write for free catalogue and free trial plan.

Standard Bone Cutter Co., Millford, Mass.

POULTRY QUEEN FOUNTAIN

will keep water warm in winter without fire, therefore will not freeze. It will keep water pure and fresh until used. As the fowls drink from the cup the water flows automatically from the reservoir. It is impossible for dirt to get into the water. Where the production of winter eggs is desired this fountain is indispensable. As a labor saver it pays for itself in a short time. In watering young chicks you don't have to carry water every day. By replenishing the water once a week the water will be clean and pure.

Inventors and Manufacturers

Cadiz, Ohio

VISITS TO SOME OF THE LARGEST PRACTICAL POULTRY PLANTS IN AMERICA.

These visits are undertaken with the idea of conveying to the readers at a distance what the poultry industry is in New Jersey and New York. They are not undertaken with a view of getting advertising, as those that do not advertise with us will get just the same space as those that have advertised. They are to show that practical poultry plants with large numbers of fowls run in a practical manner will pay.

Our first visit is to the Rancocas Poultry Farm, situated at Brown's Mill in the Pines. This place is in the heart of the pine district in southern New Jersey, thirty miles from Philadelphia, and is noted as a winter resort. The mild climate, and the pungent odor of the pines combined, made it a veritable outdoor sanitarium.

Into this place State Senator George Pfeiffer, of Camden, sunk sixty-five thousand (\$65,000) dollars in building a poultry and duck ranch. For a time it prospered, especially the duck part of it, under the management of Pat MacEvoy, but things turned out on the wrong side, and the places were divided and sold. The duck farm to a company headed by Mr. M. Warner Hargrove, and the poultry plant, comprising about one hundred and seventy acres, was sold to Mr. J. M. Foster, whose father has made himself a millionaire by correspondence, being president of the International Correspondence Schools, and to this part our story is directed.

Mr. Foster rented a place at Woodbury, N. J., and went in first for raising broilers, and trying various breeds of poultry. Within a year and a half he had sunk sixty-seven hundred (\$6,700) dollars, and had every prospect of sinking more when he turned his eyes toward Lakewood, and saw that Lakewood was making a success out of White Leghorns, more especially by catering to the white egg trade of New York city.

He resolved to do the same, and having a location almost similar, he has gone in for the same breed and is meeting with the same success. Mr. Foster has some very original ideas,

and these we will try to put before our readers in as broad a light as possible.

The first one is that he colonizes very differently from anything else the writer knows of. He has houses built one hundred (100) feet long by fourteen (14) feet wide, with roosts and dropping boards running along the full length. These buildings are built of good material, with inside sheathing of paper, and clapboarded, and is partly closed and partly of the open-air principle. There is not a partition in them. This house is situated in a plot of two acres, and into this is put one thousand (1,000) young stock right from the brooders. There they are allowed to grow up, and the cockerels are then taken out; the pullets remain to maturity and are left there for their laying season, leaving about five to six hundred to the hundred foot house.

Another original idea of Mr. Foster's is that fifty females should be run with one male. He claims that his fertility has run very high with this number. His reason for this is that for to produce a germ there must be an inclination upon the part of the female, and where an active bird is put with ten females his activity is so great that the females become tired and a large part of the male's vigor is lost. This, in theory, seems true, and Mr. Foster says in practice it is much more so.

Another original idea is in his brooder house. This brooder house, a picture of which appears, is three hundred and sixty feet long by twenty-six feet wide, having sixty ten-foot pens on each side. It is heated by a large boiler and the heat is governed by what Mr. Foster calls a butterfly valve. He has thermostates throughout the building, and these are connected with this valve, working so that when the heat gets to 88 degrees it releases this valve, which shuts off the supply of hot water entirely until what is in the pipes is cooled to 86 degrees, thereby keeping an absolute temperature within two degrees all the time. This valve was shown to the writer, and it works to perfection.

When I was on the place there were there forty-four hundred (4,400) layers, and in all of that number I saw only one sick bird, and that was from a sour

crop. In the whole of eight thousand (8,000) young ones there was not a deformed or crippled chick. This was in the third week of July, and he had a bunch of pullets laying then.

He has about twelve such houses as I have described before, using them for colonizing and laying, and they are built in among these pine trees, so that one can never get a good view of the plant, as will be seen by the pictures to the article.

Last season he ran about ten large incubators, but having had a great number of inquiries for little chicks, he rented twenty more machines from the duck farm and ran them to full capacity for the whole season, selling about twelve thousand young chicks, direct from the incubators.

His hens layed remarkably well, his record being three thousand two hundred and sixty-nine eggs from four thousand three hundred and fifty layers on March 3.

On the feeding question Mr. Foster is not a crank. He allows four ounces of feed per day per bird, and they have beef scrap, oyster shell and grit always before them in the hoppers. He feeds a mash at 7 a. m., consisting of three parts of cut clover, steamed for two hours, one part bran, two parts corn meal, one part linseed meal, and one part of wheat middlings, and one-tenth part of pulverized charcoal. It is fed a crumbly mash, thirty quarts to five hundred birds.

At 10 a. m. eight quarts of hulled oats is scattered among the litter on wet days, or amongst the pine needles on dry days. At noon eight quarts of wheat is given under the same condition. The night feed is given about an hour and a half before sundown, and consists of one part wheat and one part cracked corn, except in cold weather, when two parts corn to one part wheat, and in zero weather the night feed is of corn exclusively. Running water is supplied to every house so that the fowls and chicks have a constant supply of pure running water.

The eggs from this plant are sold in New York city to some of the largest hotels at a premium above the market prices, and there is a good demand for the same.

DUSTYNE EXTERMINATES LICE and MITES

for you without labor on your part, simply supply it to your fowls for a dust bath and they will free themselves of lice. Dust it around the houses and on the dropping boards and you will have no mites.

FREEDOM---from lice and mites means freedom from disease, this means stamina, vigor, lots of eggs, big profits and success.

Lice Are the Root of All Evil (Failure)

in the poultry business. If you would have success use Dustyne. It works for you and keeps everlastingly at it, working 24 hours every day. Absolute freedom from lice and mites is assured where Dustyne is used.

We Know and We Want You to Know, So We Guarantee Dustyne

Try it and get your money back if you are not satisfied. We pay the freight east of the Missouri river. It is the cheapest louse powder on the market. **One pound, one cent; 200 pounds, \$2.00.** Write at once for testimonials and further information.

POULTRY DUST BATH CO. : WHITING, INDIANA

"FISHELDOTTE."

The Home of "The World's Best"
White Wyandottes, As Seen by L.
A. Stahmer, Artist.

About sixty miles south of Indianapolis, in God's own country, lies the town of Hope—you know the town the Fishels put on the map). Fisheldotte, the home of "The World's Best White Wyandottes," occupies a good, big part of it, and is growing every year. At the close of the Indiana State Fair, the writer made a flying trip to the place to verify the big reports, heard at times of the place, and see for himself how close to the mark it came. Well, "Veni, vidi, vici," with one exception, and that is that the Fishels did the conquering. Some surprises came done up in small packages, but the surprise I received would necessitate the assistance of a freight train. "Magnificent." This one word describes it all. The place, the men, the stock, everything fits the description. While the place and the men are not for sale, the

building. The office contains all modern appliances, such as filing cabinets, card indexes, etc., two typewriters are kept working overtime during the busy season and Charles, the junior member of the firm, tells me that he has repeatedly worked till almost 12 o'clock at night to answer the correspondence. They believe in promptness in all things, and everything is attended to just as soon as possible. They issue a very handsome catalog, which not only contains a description and pictures of the place and stock, but also some valuable information for breeding and raising the chickens. Numerous remedies for various diseases which affect the fowls are interspersed here and there. Parties interested will do well to send for a copy of this book. They charge 10 cents a copy, and it's worth more. Addressing your letter to Department J will bring it promptly.

It is a fact, in general, the advertisers who spend their money most freely get the biggest returns on their money.

OFFICE OF J. C. FISHEL & SON, HOPE, IND.

stock they raise is, and right here a few words concerning same will fit in nicely.

First of all, how close to Standard requirements they could breed the stock has been their aim ever since they began breeding this variety, and they have succeeded beyond measure, and it is only necessary for anyone doubting this to go to the place and look for themselves. Type, type, and then some; so evenly does it run in the flock that one almost wonders and imagines he sees the same pens over again. As white as snow, with bright yellow legs and the entire absence of brassiness makes a flock of these birds a beautiful sight. It is no wonder, then, that they scraped the platter at the Indianapolis show September 6-10, 1909. Talk about ribbons, silver cups and other trophies, the Fishels have enough of them to stock a small store. The picture accompanying this article shows part of the interior of their office. The business has increased so rapidly in volume that it became necessary to enlarge the

MR. STAHMER VISITS THE MODEL POULTRY FARM, F. A. TECKTONIUS, PROPRIETOR, RACINE WIS., ROUTE 7.

Returning from the Wisconsin State Fair we stopped off at Racine, Wis., to have a look at Tecktonius' new plant. Mr. Tecktonius, better known as the "Buff Leghorn King," met us at the depot and a ten-minutes' ride in his 45-horsepower Mitchell automobile brought us to the plant, just completed. Here sixteen as fine pens of Buff Leghorns as are in the country, thirteen of them of the single comb variety and three of the rose comb, are enjoying quarters that have few equals. Mr. Tecktonius had his own views about building this plant, and for easy accessibility and compactness as well as sanitary arrangement nothing could be better. It is no wonder, then, that his stock was in the prime condition we found them.

To breed buff chickens up to Standard requirements is about the hardest

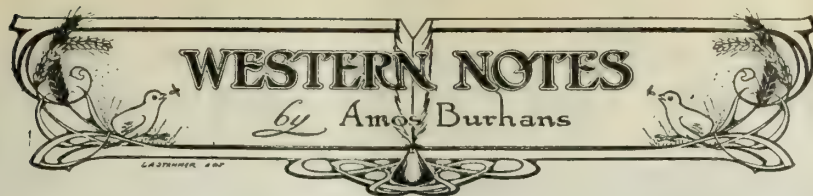

proposition a man can tackle; but how well Mr. Tecktonius has succeeded is easily proved by his show records. Winners at Chicago and birds that were in the money at Madison Square Garden are in his pens, and of his own breeding. He has close to 800 birds to sell for this coming season. We saw about 200 cockerels and an equal number of pullets that are going to be hot contenders at the coming shows. His strain is not only bred and noted for show purposes, the laying quality is also one of the chief assets of his flock. Pullets less than 4 months old have been laying for some time. He will have soon ten acres devoted to his plant, and his birds are raised under the most favorable conditions in every respect. His customers have won at the leading shows all over the country. This ought to convince prospective buyers that his stock is of the highest quality.

His birds are of good size, have fine Leghorn type and well spread tails in the females and the desired low carriage in tails of the males. And as far as color goes, none are better. His rose combs cannot be excelled anywhere. He has mastered the principles of breeding these varieties to such an extent that his flock approaches as closely to the Standard as it is possible to breed them. His young stock has free range and is housed in colony coops in an alfalfa field. This is responsible for the fine condition they are in. Sickness is unknown on his plant. Mr. Tecktonius is a responsible business man with very large mercantile interests which occupy most of his time, and his poultry business is a recreation and a hobby with him.

In Mr. Pfost his superintendent of the plant, he has as an energetic and conscientious helper as he could wish for. Absolute cleanliness seems to be this man's hobby and long before the sun is up he is at work with the chickens and by 6 o'clock or shortly after all the roosts have been cleaned—not merely rubbed off, but cleaned, and a new layer of absorbing material has been placed in every pen. He keeps careful record of the flock and his charges are always in good condition. In conclusion, will say that Mr. Tecktonius is very liberal with his customers and his prices are very reasonable. He issues a handsome catalog and it will pay parties interested to write for same. Address all correspondence to F. A. Tecktonius, Route 7, Racine, Wis.

The Williamsport, Pa., show dates are November 30 to December 3, 1909. If efforts count they will have a grand show there. The judges are Messrs. Cornman and Schwab. Write to James T. Huston, secretary, for further particulars.

Mr. C. W. Switzer, owner of Roseland Poultry Farm, Euclid, Ohio, reports having made a trip to Cainesville, Ont., to see J. W. Clark, the Orpington man, of whom he purchased some of the finest stock on his farm. Two males and twelve females in all were purchased. These fine birds are to be added to Mr. Switzer's flock, which already contains many prize winners in hot competition at the great Cleveland, Ohio, show. It will be remembered that Mr. Switzer has been living in Cleveland for the last four years, and he is winning at the last show, in which he defeated many good birds that have been winning at the eastern shows. Mr. Switzer has been compelled to enlarge his poultry plant considerably on account of his constantly increasing business. He is only one of the many breeders we know who are obtaining fine returns from their ad in the American Poultry Journal.

This department is open to all readers and advertisers in the western territory and all are invited to send in all poultry news items that come to their attention. Address Amos Burhans, Waterville, Minn.

A western breeder who loaned a friend a bird to show says that never again will he put a bit of fire into another breeder's cloud of smoke!

The Nebraska state show goes to Hastings this coming winter, third week in January.

Omaha show officers are planning another big event for 1909. Their dates will not conflict with any other big western show.

A. A. Ziemer, Austin, Minn., will have as usual a goodly bunch of young stock for the trade this fall. He is making the old reliable specialty of buffs and will have more good ones than ever.

W. S. Russell is slated full for the coming show season and reports the Rocks as being a bit better than ever.

C. W. Brehm, Harvard, Neb., is building up a great business in standard bred fowls and by fair dealing is getting into further territory every season. He will grow a fine lot of youngsters this year.

W. S. Robison, the Buff Rock man at Fayette, Showmeland, will be at the state fair again this year if all goes well. He is one of the boys who makes the competition.

Victor O. Hobbs, Trenton, Mo., has been appointed to the state poultry board by Governor Hadley. Hobbs is a live one and worked like a good fellow last winter when it came to helping his home town take care of the state show. He is breeding Buff Orpingtons and about everybody in the west knows it.

Tom Quisenberry has been reappointed secretary of the state poultry board of Missouri, which is but recognition of the valuable services he has ren-

dered to the industry down there. He is a secretary that will make good as an educator as well as in the harness in caring for the annual shows.

Ahlquist Brothers, of Omaha, the firm principal being F. C. Ahlquist, who brought the Omaha show to the front the past winter, have taken up the breeding of Partridge Wyandottes in addition to their strong layout of Barred Rocks. We wish them every success and know that such a combination will achieve it.

The American Royal live stock show will again have classes for poultry at the big fall Kansas City exhibition, and the old "vet." Tom Southard has been engaged as superintendent for the coming event. If you want premium lists ask Tom for them and address him at K. C.

J. J. Bleakly says in his ads. that his Buff Rocks get theirs, and I guess they do from the way they have been going after the ribbons in the past. J. J. says they will be up to their old tricks again this winter.

F. S. King, the Ruby Red man, will be out with a blooming line of them this fall and winter, if we are to believe all the murmurs from his direction.

Barrett, W. D., Shelton, Neb., is getting into the Orpington game good and deep. The coming winter will show us how much better he is in the line up and if he keeps coming as he has been some of the old heads want to look out, especially for their scalps.

Ralph Whitney, superintendent of the Minnesota state show and just now helping get things in shape out there at the A. Y. P. show, says that as far as he is concerned the vicinity of Stewartville, Minn., is better fixed chicken wise than it has been for years past,

and this means some good White 'Dottes, Embdens, White Hollands and Pekins on the White Fowls Farm.

S. W. Raddue, Delavan, Minn., manager of the Orchard Hill Yards, tells us by clothesline wireless that he is coming out this fall with something good in the way of Barred chickens and both combs in Brown Leghorns.

H. H. Benjamin, the White Wyandotte enthusiast, Hutchinson, Minn., will probably be out with a line of good ones at the state fair and later at the state show.

Buff and Black Wyandottes still hold the boards with Henry Hess, Winona, and they always will. He is one of the breeders who makes a state show and the state's fancy a worth while pair of affairs.

THE TELEPHONE DOG.

Our latest story is that of a dog who was much attached to his mistress.

He was a knowing Ariedale and always accompanied his mistress when she went visiting, always waiting patiently for her return at the door where her mistress had entered. On this occasion she left by the rear door and failed to call "Lorna" and did not remember her until she reached home. Then she phoned her friends, who, after scolding, coaxing and even whipping, could not make Lorna move one step towards home. She only crouched the closer to the door where her mistress entered.

They called up Lorna's mistress by phone and explained their predicament. She was at a loss to know what to do as she must prepare supper so she could not well return. Finally she suggested their letting Lorna in and bringing her to the phone, where she could talk to her and tell her to come home. On opening the door Lorna was willing to come in. She commenced searching for her mistress. They caught her and held the receiver to her ear. It was plain to see she recognized her mistress' voice and when she told her to come home she gave a little bark and ran to the door. When it was opened she bounded out and ran home. The phone soon rang again saying she was home.

This is the first time we ever heard of a dog telephoning.

We lead, others follow.

Our International Champion. First Madison Square Garden, Guelph, Toronto, Hamilton, Ottawa. Weight 11 1/2 pounds.

WILLARD'S BUFF ORPINGTONS

WIN AGAIN—At the State Fair at Detroit we won every first, second and third prize in the single class and 1st and 2d pen, being every prize competed for. The Champion male shown in cut gives you the type and shows you the quality of Orpingtons we breed, he is the sire of many birds in our flock of

1,000 Head of Grand Young Birds

which we offer very reasonable for quick sales. These birds are bred right, have size, correct type, and the desired shade of exhibition color. We have what you are looking for in show birds or breeders. Also a few yearling breeders we will sell cheap. Write for our prices. Satisfaction guaranteed.

John O. Willard, Linden, Michigan

POULTRY PUBLICITY

Louis A. Schuler

[Any of the poultry breeders contemplating to get out a new catalog and desiring further information about the cost of cover-design plates and poultry illustrations are invited to correspond with us. We can handle all kinds of art and engraving work and at prices that are reasonable considering the high quality of goods which we deliver.—Editor's Note.]

A SERIES OF SHORT TALKS ON THE ARTS, SCIENCES, TRADES, ETC., THAT MAKE POULTRY ADVERTISING BRING RESULTS.

"THE ADVERTISING VALUE OF A GOOD CATALOGUE."

IN OLDEN times when when printing and engraving was in its infancy and an expensive proposition, merchants having anything to sell, instead of getting out a catalogue as we do now, used to employ a "town crier" who on the different street corners would bellow at the top of his lungs the different goods his employers had for sale. While the competition at that time was not as keen as it is now, and the mail order business not thought of then, this living catalogue answered the purpose very well, and this method of advertising generally brought results. Modern times, with the great improvement in printing and engraving, have done away with this kind of advertising and instead of a town crier disturbing a fellow's sleep in the early morning hours Uncle Sam's servant quietly slips a catalogue in the mail box.

The catalogue nowadays has become the salesman.

Many concerns have begun using catalogues entirely and the traveling salesman is fast losing his job wherever it is possible to sell the goods by mail. While the poultrymen are fast beginning to realize that the better the catalogue the easier sales can be made, yet a great percentage of the poultry advertiser's literature is "mediocre." Some breeders having the finest kind of birds are getting out catalogues that stay in the prospective buyer's hands only a minute before they wander into the waste basket. Their catalogues contain obsolete pictures, are printed with old-fashioned type and are generally clothed with an unattractive cover, and these are the breeders that do most of the kicking when they do not make any sales, and always claim that catalogue advertising is money thrown away. All advertising matter, such as catalogues, booklets, etc., without good illustrations of your birds, and having for the outside cover nothing that attracts attention, is like soup without salt, and such catalogues are generally thrown away on their receipt. A well gotten up booklet or catalogue, containing beautiful illustrations of your birds, has a much better chance of being kept

or passed to someone interested than one selling the same variety of birds that is presented to the customer with

Fig. 1.

Cut made from unretouched photo and does not do justice to the beautiful specimen of Wyandotte which he is.

a weak cover design and poor illustrations or none.

Mr. Poultryman, how often have you exclaimed when you happened to see a fine picture of a chicken in some other

Fig. 2.

Cut made from same photo retouched. Legs have been straightened and the detail in plumage brought out. It is needless to say which is best for advertising.

catalogue or circular, "Gosh, but that fellow has fine birds," and has not

this same picture left a lasting impression (better say lasting advertisement for the other fellow) in your mind? Right here is a good tip for you. Use the best printed matter that you can afford, show nothing but the best illustrations of your birds, use nothing but the highest grade of engravings that you can buy. It is poor policy to ask the engraver how cheap he can make a cut, ask him how GOOD he can make it. They come a little higher, it is true, but better use one good cut than ten poor ones, and the additional advertising value which this cut has will offset the extra expense. For the outside of the catalogue use a cover design that is pleasing to the eye and up-to-date, printed in a harmonious color scheme, and the design suggestive of the article which you are selling. Your catalogue is your salesman and the better he is dressed the better impression will he make on the prospective customers. Good pictures tell a story and are remembered, type leaves a cold impression and is soon forgotten, no matter how strong the argument.

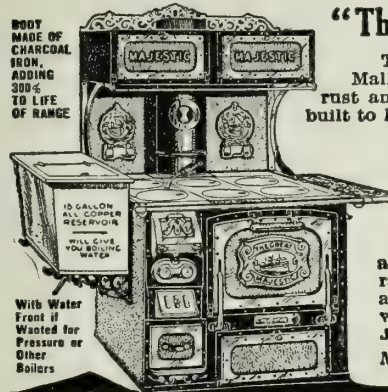

Many of the poultrymen are possessors of cameras and sometimes secure pictures that show the birds off to perfection. The background, if objectionable, can easily be changed and a new one drawn in on the photo. Broken tail feathers, spots and other details can be remedied. It is a well known fact that colors photograph different than they appear to the eye. For instance, red, buff or yellow photograph much darker than they look. A photograph of a meadow covered with thousands of black-eyed susans, that attract the eye for miles, will show none of these flowers in the finished picture and nothing but a lot of black spots instead of yellow will be seen. On the other hand, the bluish tinge of the Barred Rocks makes them photograph much lighter than it appears to the eye, for the same reason as you will never see clouds in the blue of the sky unless the picture is made with special sensitized plates. Seldom will you see the striping of hackle and saddle feathers of Brown Leghorn or Partridge Cochins, or the golden centers of Wyandottes, Polish and Seabrights. A photograph of these varieties used as it is naturally does not do justice to the selling points of the bird and needs retouching to bring out the markings. This can be readily accomplished by the artist and the expense is money well invested. On account of the rapid action with which white and blue rays of light affect the photographic plates the detail in white plumage does not show up very strong. The negative is too dense and does not allow the light to penetrate to the sensitive paper be-

low. The artist retoucher can come to the rescue again here and put in the detail which is missing in your photograph. For instance, look at the two pictures accompanying this article. No. 1 is made direct from the photo print without retouching and No. 2 has been retouched. It is needless to say which one offers the most convincing argument for selling purposes. Some big poultry dealers know the value of well printed and illustrated catalogues. Take, for instance, the catalogues of the Fishels, De Graff, Duston, Tecktonius and many others. Their catalogues are marvels of the printer's and engraver's art, and the fact that these people are trying to get something better every year, no matter what the expense, bears out the argument that "there is real advertising value in a good catalogue."

Catalogues are printed in all sizes. A most convenient size is 6"x9". For the outside covering a modern decorative design, suggestive of the variety you are breeding, and printed in two colors, will be a good starter. An extra embossing plate to raise the lettering, etc., will add to its appearance, and if the breeder desires a still fur-

are veritable mines of information about breeding, mating and raising the stocks, and if the space in your catalogue permits it is a good plan to give some of this to your customers. Especially such information that is original with you and is of benefit to the breeder will be appreciated. Do not try to rehash old theories; they are tiresome and nobody will pay any attention to them. Last, but not least, "to the woods" with poetry in a chicken catalogue. Some of the attempts along this line, which we have

read, would drive even a W. C. T. U. member to commit a rash act. While we occasionally run across creditable little gems showing real talent and good sense of the maker, yet they will not induce a buyer to part with his cash for and are valueless as an advertisement. The space they occupy could be used to better advantage with a good illustration. It takes time and thought to build a catalogue right, and it is advisable to begin as early as possible and not wait until the busy season is at hand.

"The Range with a Reputation"

They're built on honor of the best materials, Malleable and Charcoal Iron. They won't rust and you can't break them because they're built to last.

The Great and Grand MAJESTIC Malleable and Charcoal Iron RANGE

has a big boiler right close to the fire—heats water in a jiffy. Air-tight joints and pure asbestos lining make a perfect baker with little fuel. The best range money can buy. Made in all sizes and styles and sold by dealers everywhere. Write for free booklet: "The Story of Majestic Glory"

Majestic Mfg. Co., Dept. 27, St. Louis, Mo.

S. C. W. LEGHORN.

Winner of 1st as cockerel at Cleveland, 1908, and 1st as cock at Detroit, 1909. Bred and owned by H. C. & C. W. Sixt, Westpark, Ohio.

ther improvement he can have the books bound with a handsome silk cord in a shade that will harmonize with the colors used in the design. A trademark, if the breeder has one, can take up the back of the cover. A catalogue presented thus induces the buyer to look further, and the contents should contain such information that will interest the reader and hold his attention until he has looked through the book from one end to the other. Show at least two full page illustrations of your birds, showing the type of your strain and how close they approach the standard of perfection. Also show some views in your yards. If possible show a few pictures of your late prize winners, with their show records, giving the number of birds in competition. If you have never exhibited show a number of your birds singly, so the prospective customer can get a line on your stock. These cuts can be made in the following sizes, 2½" or 3". As this is standard measurement, they can do double duty, and be used in the poultry magazines or in your ads. Do not forget to publish a few testimonial letters, and be sure that the matter about prices for stock and eggs is clear and cannot be misunderstood. Many of the catalogues nowadays

THE TWOWILLOW FARM

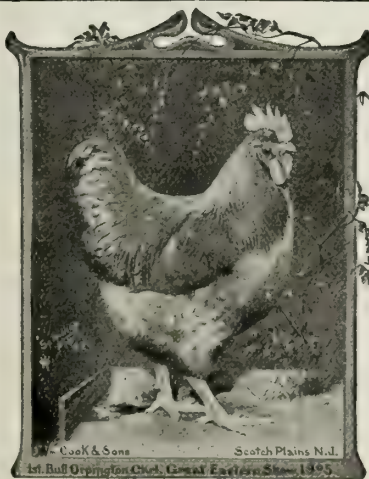

Barred Rocks Pullets ready to lay, cockerels, cockerels mated to pullets. Many fine small pens being mated. **Get one early!**

THE TWOWILLOW FARM, 348 DODGE ROAD, BEVERLY, MASS.

Walter G. Fenton

LARGEST COLUMBIAN WYANDOTTE BREEDER IN THE WORLD—Owner and manager of Fenton Farm, neatest, cleanest, most sanitary specialty plant in the country. William Cook & Sons

[ESTABLISHED 1873]

BOX A . SCOTCH PLAINS, N. J.

ORIGINATORS : OF ALL THE ORPINGTONS

For information on the origination of all the Orpingtons and valuable hints on poultry keeping, send 6c for our new illustrated catalogue.

If you want the best Orpingtons you must send to their originators, who naturally have the best, as proved by our many unbeaten show records. 12,000 firsts and specials won by us. 90 firsts, 68 seconds at five showings at Madison Square; more than six times as many firsts as any other Orpington breeder. Convincing facts, these.

We guarantee safe delivery and satisfaction, which is backed by a reputation of 36 years standing; this should mean something to you.

Several thousand stock birds always for sale.

Every order receives Mr. P. A. Cook's personal attention. Advice free. Inspection invited. Trains met, 19 miles from N. Y. City.

WONDERFUL

Egg Records, Winnings and Cheap Prices.

THE U. S.**OFFERS THE GREATEST OPPORTUNITY**

in the world to makers of industrial or denatured alcohol. Those who start this production now are bound to come to great rewards. The field is practically untouched, and by starting now you can have things very much your own way. **THE UTILIZATION OF WOOD WASTE BY DISTILLATION.** A general consideration of the NEW INDUSTRY, including a full description of the distilling apparatus used and the principle involved, also methods of chemical control and disposal of the products; first edition illustrated by seventy-four engravings, 156 pages. This book is cloth bound; it will be sent to any address, postpaid, on receipt of \$3.20. Every farm, ranch and merchant needs a 5-gallon tax-free denatured alcohol distillery apparatus; price \$125.00. A 100-gallon distilling apparatus costs \$700.00. May we have the pleasure of your early reply? We are sincerely yours,

Wood Waste Distilleries Co., Cleveland, Ohio

POULTRYMEN, "HOWDY"

"HOWDY" IS THE SLOGAN FOR THE BIG
 EL PASO FAIR AND EXPOSITION
 NOVEMBER 1-7, 1909

The Poultry Show A Big Feature

\$1500 Cash Prizes : Many Elegant Trophy Cups

This is our first show, and as poultry breeding is just taking a big boom in this section, thousands of people will decide on their initial stock from the best specimens exhibited at this fair.

Come and visit us. If you can't come, send in your exhibits, our superintendent will care for them. Judge C. E. Emry of Carthage, Mo., will judge the show. Entries close October 30, 1909.

Send for premium list giving all particulars.

J. M. Morrison, Supt. EL PASO TEXAS J. C. Rous, Jr., Secy.

WYANDOTTES

Columbians, Goldenes, Whites, R. I. Keds; both combs. S. O. Buff Orpingtons. Old stock for sale cheap to make room for young.

Dillon & Bell 4106 Colerain Avenue Cincinnati, Ohio

Railroad Lands Very Cheap FREE TRANSPORTATION

To quickly build up population along the Washington and Choctaw Railroad in new reservation just thrown open, I will sell a little of our 100,000 acres of \$25 and \$50 lands for \$17.50 per acre.

Magnificent opportunity for settlers, investors and speculators. Easy terms, as low as \$1.00 per month. Any size tract from 10 acres up. Gulf Coast lands the most productive in the world—ten acres will yield an income of \$5,000 a year. Sweet, pure water, cool pleasant summers and mild, balmy winters; beautiful lands, adapted to farming, truck and fruit growing, or live stock, poultry, bees and dairying; no swamp, no stones, irrigation not needed; only part of the United States absolutely free from local diseases. Sixty miles from the Coast; 21 hours from St. Louis; 29 hours from Chicago; with best shipping facilities. Don't buy land anywhere until you investigate this. Send me your name, a postal card will do, and I will send you complete details, also a railroad pass free, whether you buy or not.

M. G. WINEGAR, General Manager
 6136 Times Bldg., St. Louis, Mo.

Special terms to live land agents capable of buying two sections or more for spot cash

Coleman's Eureka Tonic and Roup Tablets

The greatest discovery of the age in the poultry remedy line. These tablets are positively guaranteed to cure **roup and colds**, will build up the fowl's system, guaranteed to prevent the loss of birds due to the exposure and disease contracted in the show room, will put the fowls in the finest possible condition for exhibition. No matter what the disease Eureka Tablets will save your birds.

Don't take our word for it, but read the following unsolicited testimonials from the greatest authorities in the country:

Loring Brown, eminent poultry judge and manager of Belmont Farm, Smyrna, Ga., the South's largest poultry farm, writes: "Please send the tablets by return mail. I have lost no less than \$200.00 worth of birds by not having your valuable remedy."

H. B. Hark, manager of the Hartman Stock Farm Poultry Yards, Columbus, Ohio, the world's largest poultry farm, writes: "They are the very best thing I have ever tried to put a bird that is out of condition into good shape quick. At the Kentucky State Fair a friend came to me with a cockerel that was all in, could not hold up his head. I gave him two of your pink pills. The next morning he stood up like a fighting cock and took one of the first prizes."

Dr. S. R. Harrison, Shelby, Ohio, writes: "Your tablets have saved birds for me that were more than half dead. I cannot find words to speak too highly of this wonderful remedy."

What more proofs of the wonderful power of this remedy could be asked for.

Write today. A liberal sample box will be sent for stamp, or better still, send 25 cents for a full size box containing 65 tablets, postpaid, or 5 boxes for \$1.00.

The Coleman Company

Desk 4 Carey, Ohio, U. S. A.

A WORD FROM DUSTON.

I HAVE read what I have found regarding the work of the American Poultry Association at Niagara. I much wanted to attend this meeting; had planned it for a year, but circumstances prevented my going. Perhaps

no loss to the association, but a decided one to me.

The association did one thing for which all breeders should rise up and call it blessed, that is, in not adopting the recommendation of the committee eliminating disqualifications. In our legal courts today the judge passes on the law,

pronouncing sentence and giving decisions according to the written law, knowing that if he makes a decision contrary to this it will be set aside by a higher tribunal; and, as I understand it, it is the aim of all trial justices anyway not to get a reputation of continued reversal of decisions. With us the poultry judge is final, and no matter how grave an injustice is done an exhibitor, he has to stand it, for I have yet to know of a decision of one being set aside. So let me right here just warn the amateur who may be tempted to put up a \$5 protest fee to keep your money, you will need it. So then the reading of the Standard, our poultry law, should be so plain and exact, were it possible, that a "wayfaring man, though a fool, would not err therein." Now, don't you for a moment think I am calling the modern poultry judge a fool, far from it, but I do say that until some of them sprout wings they have now all the latitude they should have. It sounds all well enough, and very plausible, to say its too bad to throw out an elegant specimen for such and such a defect, but wait: The line has got to be drawn somewhere, the same in fancy stock as in other things, and the line has, and I believe is, drawn at the point where the defect has proved the most annoying and of such seriousness in the way of future breeding as to warrant eliminating such specimens from competition. I do not know in the White Wyandottes a single disqualification but what in the past has been a source of heart burnings because of the frequency with which it appears in the progeny and the persistency with which it will appear in many of our "very best" specimens. If such is the case bar out the specimens which will in the future generations show the defect, and sometimes to an alarming extent. This talk of microscopic examination no one takes any stock in. On the other hand, every judge of prominence "has been through the mill" and knows when a reasonable doubt exists, so is not justified in awarding prizes to birds such as above or that have been "fixed." As one prominent breeder and an exhibitor of fifteen or twenty years' standing said to me a day or two since: "No one would know where we were at if such a rule was established." Everything could be shown and anything the judge seemed to fancy to win. There would really be no culls except deformed specimens, and I cannot believe that it would have any effect towards preventing faking, for the opportunity would exist to avoid punishment by cutting same as for absolute disqualifying.

Am looking forward to a chance to review the whole work of the meeting, but from what I can learn of the work on the White Wyandottes, if it is as satisfactory in other breeds the breeders have cause for congratulation and to extend the same to those members who labored so hard towards this end.

Arthur G. Duston.

So. Framingham, Mass.

During the past month we received from the Chicago House Wrecking Company a copy of their new catalogue No. 160. This catalogue contains 438 pages and is printed on good paper and gives prices and illustrations of everything for the farm or in the home, and as these people sell direct to the consumer the prices are much lower than the same goods can be bought for elsewhere. We are also in receipt of a copy of their "Book of Plans." This book contains 48 pages and cover and gives plans and specifications for building all kinds of farm buildings and dwellings. This is catalogue No. 55, and will be sent to anyone who asks for it and mentions American Poultry Journal.

QUESTIONS AND ANSWERS

Questions will be answered in this department only when full name and address is signed by the writer.

Question.—Please tell me in your Questions and Answers where I can communicate with a breeder of Dominiques.
E. W. P.

Answer.—Watch the advertising columns of this magazine.
Plainfield, Vt.

Question.—Last year we raised and housed about fifty Rhode Island Reds in a new house 12x20 made of new lumber and on ground not used for chicks before. Fowls were fed well, house kept clean and well ventilated. Also had free range with plenty of fresh water and oyster shells, and pullets began laying at 5½ months. Before freezing weather the points and back ends of the combs of the cockerels turned a dark color, nearly black, resembling frost-bitten combs. We treated them by anointing combs with mentholatine and carbolated vaseline, which seemingly did no good. Near Christmas we purchased a male bird from each of two other breeders. The new birds were put into the same flock and in two weeks their combs were in the same condition. We continued treatment, but combs got sore and some of the points came off. In the late spring when warm dry weather came they got

well and combs had a natural color. But every cool, wet spell during the summer combs turn dark again; when the weather changes to warm, they are bright red. Am very anxious for a remedy and would also like to know the cause.
Mrs. J. C. Clovis.

Jollytown, Pa.
Answer.—Can some of our readers please answer above?

Question.—Will you please tell me through your valuable journal what is the matter with my Barred Rocks. (1) They do not show any signs of being ill, so I commenced to weed my old hens out to make room for young stock. On killing my first hen about two weeks ago I found her liver to be greatly enlarged and covered with small yellow sores. She was very fat. The second hen was not so fat, but her liver was covered with small yellow sores. As to whether there are any more in my flock affected that way I can't say, for they seemed to be all right. (2) I have sixteen large chickens and sixteen small ones. Don't you think they have enough room in a house 12x18? (3) I have been bothered some with hen lice; have commenced a war on them; am using Lee's hen lice killer. Am I on

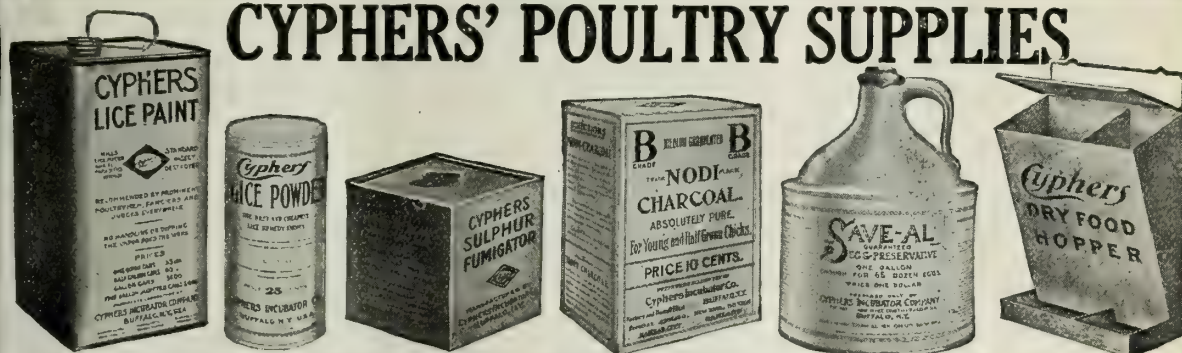

the right track to exterminate them? My chickens are very broody, but hatches poor. There seems to be a lack of vitality in the little ones in getting out of shell. Could there be anything in their being too closely in-bred?
Decatur, Ill.
C. D. R.

Answer.—(1) Liver trouble is caused by lack of exercise, which produces an overfat condition. For full particulars on this disease you should procure a copy of Dr. Salmon's book, "Diseases of Poultry," price 50 cents. For sale by us. (2) Yes. (3) You are on the right track, but you should also thoroughly whitewash your house, at least three times a year. Lice are probably the cause of your poor results in hatching.

Question.—I have a very fine S. C. White Leghorn cockerel. I won first at two shows last winter. He had a very long and beautiful tail which he is wearing off badly. Will he grow a new one by November? If not, will he ever grow another? Would it be a good idea to pull the worn feathers out? I have two pens of this breed headed by cockerels that score more than 95. Have been breeding them all summer. Will it be a good idea to change them from one pen to the other? If this was done do you think the eggs would hatch better? (They have been hatching good.) Is green beef ground fine good for laying hens? If so, how much should be fed, and how often? Will it disqualify a cockerel to have had the end of one point of his comb pulled off fighting?
Adel, Ga.
S. J. H.

Answer.—He will grow a new tail,

Each issue is full of timely, illustrated, front-increasing articles; Editorials; Turkey Dept; Ducks and Geese Dept; Questions Answered (free) Dept; Disease Dept, etc. Published 19 years, Monthly, 50 cents a year.

Poultry Herald, Dept. C, St. Paul, Minn.

but it will not be fully developed by November. The old feathers will fall out in time, or they may be pulled out. No benefit would be derived by changing cockerels. Ground fresh beef is good for laying hens and they can be fed two ounces three times a week to each fowl. Cockerel would be cut for the missing point, but not disqualified.

Question.—(1) How long can alfalfa meal be kept and still be good for poultry. (2) Is it best to force a molt, or let your fowls molt naturally and without assistance? (3) When should poultry molt in this climate? (4) How long after molt before hens will lay?

Meridian, Miss. J. M.

Answer.—(1) For an indefinite period is not allowed to get damp. (2) Fowls should not be forced into molt; but molting can be assisted by proper feed and care. (3) In August and September. (4) From four to six weeks.

Question.—If a pullet (or hen) lays 125 eggs in one year from the day she

"QUEEN OF IOWA."

Bred and owned by D. W. Boydston, Nevada, Iowa.

Mr. Boydston, one of Iowa's most successful breeders and fanciers and originator of the Golden Nugget strain of Single Comb Buff Orpingtons, announces that he has this season one of the best and most even-colored flocks of young stock he has ever raised. The half-tone in this issue is one of Mr. Boydston's crack pullets (score 95). A better colored pullet is hard to find. All his stock is bred from birds that are almost free from brown or black. Any of his stock will soon be ready for the show room as some pullets weigh 5 pounds, and cockerels 7 pounds.

lays her first egg, how many eggs may we expect her to lay during the second year?

H. C. B.

Bloomington, Ind.

Answer.—The egg yield for the second year should equal that of the first; but very seldom exceeds it.

Question.—(1) Put Buff Rock hen on some eggs and the fourth day I found her dead on the nest. The nest was kerosened inside and out the day before she set. Can you tell me the reason of her sudden death? (2) How can the comb be dubbed off a young cockerel? (3) How big a space in a house and yard is required for twenty hens and a rooster?

D. P.

Antigo, Wis.

Answer.—(1) We are unable to tell without more detailed information. (2)

Harness leather becomes hard, brittle, unsafe, when the pores in the leather are open to wind and moisture. An application of

EUREKA Harness Oil

fills the pores, seals them against these hardening, rotting agencies and keeps the harness a beautiful black, soft, elastic, and tough. Eureka Harness Oil does wonders for a harness. Ask your dealer.

BOX 176, FAIR-HAVEN, PA.**

By cutting. (3) Each fowl should be allowed at least six square feet of floor space in a house, and ten square feet of yard room.

Question.—I lost a customer after I had him two years. He said those eggs were cloudy and so by and by he didn't take any more. The other day my wife found one like those my customer said. Is there anything in the food? Or is that in certain hens? Or is there one or more sick ones among them?

Norton, Mass. G. W.

Answer.—This may be due to the feed, but it is more than likely that there is a diseased fowl in your flock.

Question.—What kind of feed is best to feed S. S. Wyandottes in the winter time to make them lay and put them in order for show purposes?

Mercer, Pa. J. P.

Answer.—Birds intended for the show room should not be fed for egg production, for as soon as a fowl begins to lay she gets out of show condition. Space here will not permit us to give full details in regard to feeding, but articles on this question will be found in other parts of this magazine from time to time.

Question.—(1) Last winter, when it was not very cold, some of my chickens' feet turned red, then they sat down and died. Hot ashes were thrown to them. Was this the cause? If not, what was the trouble? Is there any remedy? Do Houdan chicks have white breasts and crests?

F. A.

Mount Vernon, Ind.

Answer.—(1) We hardly believe that it was the hot ashes that killed; but we are unable to say, unless we had a detailed statement of the condition of the intestines after death. (2) See American Standard of Perfection for description of the Houdan.

Question.—Can you tell me what caused my hen to have the yolk of egg baked around her intestines, and my chickens to have fits? They would run around the yard like a cat in a fit. I have had several die after having them. How much should I feed chickens three months old? One chicken that died had a piece of china plate in its crop. Would that cause its death?

Greenfield, Mass. Wm. H. B.

Answer.—Caused by having an egg broken in the egg passage. Fits in little chicks are usually caused by intestinal worms. Chicks three months old should be fed three times a day just what they will eat up clean in about five minutes. The piece of china would not kill the fowl unless it was too large to pass from the crop to the gizzard.

Question.—(1) How many White Plymouth Rocks can I successfully raise in a place, floor space being 8x8 and a run 12x9? (2) How many nests should I need for this number? (3) What months should chicks be hatched to produce best show birds? (4) Please tell me how to heat my henhouse without stoves. It is well banked, but the weather is from 20 to 80 degrees below zero in the winter here.

Weepawa, Man. H. W. C.

Answer.—(1) About ten. (2) Three. (3) April. (4) Hot water or steam system.

Question.—(1) I have a light Brahma hen gone blind in one eye; can't hardly

50 CENT BUTTER BEFORE CHRISTMAS AND WHAT IT MEANS

"50 CENT BUTTER BEFORE CHRISTMAS"—is the prediction freely made by the big leaders in butter production, based upon their close knowledge of trade conditions.

Butter at anywhere near such a price means that a De Laval Cream Separator WILL PAY FOR ITSELF BEFORE THE END OF THE YEAR in its savings over any gravity or setting system.

It means that a De Laval Cream Separator WILL PAY FOR ITSELF BY SPRING over any competing make of separator in use or on the market.

It means that an Improved De Laval Cream Separator WILL PAY FOR ITSELF WITHIN A YEAR over the older style De Laval Cream Separators in use.

It means that no one separating cream from the milk of even a single cow CAN AFFORD to continue to do so a day longer than can be helped without an Improved De Laval Cream Separator.

And buyers should remember that a De Laval Cream Separator—on which there is just one reasonable price for everybody—can be bought at a fair discount for cash down or on such liberal time that it WILL PAY FOR ITSELF out of its own savings.

That means that NO ONE need go a day longer without a De Laval Cream Separator than may be necessary to order and receive it, and that they CANNOT AFFORD to do so.

It emphasizes the urgent importance of seeing the local De Laval agent or communicating with the Company directly AT ONCE, with a material dollars-and-cents loss EACH DAY of delay in doing so.

Then WHY delay another day?

The De Laval Separator Co.

walk; won't eat; lays around. Seems to be getting worse all the time. Please state cause and remedy. (2) Will a S. C. B. Minorca hen lay better than a S. C. R. I. Red hen? (3) How many eggs will a S. C. B. Minorca hen lay during a year? M. H. J.

Sidney, O.

Answer.—(1) No information here on which to base a reply. (2) This is a matter of personal opinion. (3) This varies from 100 to 150 eggs.

Question.—(1) Should one acre of fair orchard pasture be sufficient for 200 hens, if divided into sections? (2) Would you advise 50 hens in a colony, each two colonies, or 100 hens, to have $\frac{1}{2}$ acre divided into three sections? (3) What grass or grasses do you advise sowing in an orchard for chicken pasture, and how much per acre? How would white clover and bluegrass do for this purpose.

Columbus, O.

J. A. F.

Answer.—(1) Yes. (2) Better results will be obtained if divided into three sections. (3) Alfalfa is considered the best, although red clover and blue grass is very good. About 100 pounds to the acre.

Question.—(1) Why were eggs not fertile which were taken from pen of ten pullets and yearlings mated with a three-year-old rooster (R. C. Rhode Island Reds)? Several settings were taken about the first of May and but three eggs were fertile. (2) At least three times within the last three months have found a seemingly perfectly sound hen dead in roost room or scratch yard. In one case several hours after death a yellow dry scum appeared in one eye. Could find nothing wrong in other cases.

Can you tell me the trouble? Will rats attack a full-grown hen? Could find no signs of lice or rat bites. (3) How is the best way to get rid of rats? (4) How best can we replenish our stock without spoiling it? We started in nearly three years ago and have been in-breeding, culling out those that were off color, etc., until this year we have had many compliments on the looks and condition of our flock, several telling us we have the best looking R. I. Reds in town. But we are not getting ahead enough in numbers and must get more hens some way. We are only boys, and any advice you can give us will be greatly appreciated.

Oak Park, Ill.

R. W. W.

Answer.—(1) No doubt due to the impotency of the male bird. (2) This was no doubt apoplexy. Rats will very seldom attack a full-grown fowl. (3) By using some one of the rat exterminators now on the market. (4) Too close in-breeding will ruin your flock in time. Procure new blood from the same source you secured your original stock.

Question.—(1) What is the cause of my pullets coughing and snuffing? They cough at night and there is a discharge from the nose. (2) Some of my pullets have their tails away around on one side. Are the tails broken, and won't they come straight again? J. W. M.

Orbiston, Ohio.

Answer.—(1) This is a cold, and will develop into roup and other ailments unless properly taken care of. Procure some one of the various roup cures advertised in these columns and give as directed, or send to us for a copy of Dr. Salmon's book, "Diseases of Poultry,"

which will tell you just what to do in cases of this kind. (2) This is usually caused by a slight curve in the back, for which there is no remedy.

Question.—Explain the method by which fowls are killed and bled in roof of the mouth. W. V. V. S.

Housatonic, Mass.

Answer.—Hang the bird by the feet, head downward; open the mouth of the bird with the left hand and insert the blade of a small, sharp knife into the roof of the mouth, well back, so that the blade penetrates the brain and at the same time severs the main artery, which is located there. This is a very simple and humane method of killing fowls and can be learned very quickly.

Question.—(1) I have White and Brown Leghorns and Barred Rocks and wish to let them all run together until the first of February, 1910, when I intend to separate them so as to get eggs for setting in March. Will they show the cross or breed true? (2) Why is eye never mentioned as a feed for chickens? (3) If I have a Brown Leghorn cock on White Leghorn hens say for a month and then take brown cock away and put white cock with said hens how long will the hens show the brown cross? G. L.

Williamsport, Pa.

Answer.—(1) They will show the cross for an indefinite period. (2) Because it has been proven to be a poor feed for chickens, as it does not contain the proper ingredients in the right proportion. (3) From two weeks to six months.

Question.—I have a S. C. Buff Orpington cock one year old. He is on

WE ARE READY OWEN

THIS SPACE COSTS MONEY and we are not going to use any of it this month to illustrate our many grand winning birds. Most of those you will find exquisitely done by the two great artists Sewell and Schilling in our beautiful catalogue which is yours for the asking. We have taken so much pains in that catalogue to tell you the story of Owen Farms, to picture for you to the very best of our ability a very interesting modern poultry plant and to fully make you acquainted with our ways and methods of raising fancy poultry, that it is entirely unnecessary for us to reproduce in our advertising space anything concerning these very important and, we hope, to the public, very interesting subjects.

Another reason why we are not inclined to use our space for illustrating our birds is that we have so much to say about them, so many really strong features and arguments to present to you as to why you should get into close touch with Owen Farms that we can not possibly spare the space in this advertisement.

A BUSINESS HOUSE.—Perhaps no one question concerning a house we anticipate purchasing anything from is more important to use than this one, suggested by the caption, Is Owen Farms a true business house? Will they answer my correspondence promptly and give me the information I want? Do they appreciate what every good business house puts before everything else that a satisfied customer is the only true foundation on which to build a lasting and successful business? If I am disappointed in my purchase of Owen Farms will they give me entire satisfaction, such satisfaction as every reasonable man has a right to expect of an honest house from which he buys anything? Do they not describe their birds fairly, without exaggeration, calling your attention to any defect as well as to their excellent points?

We dare to say to all of these questions "Yes" and again "Yes."

GET ACQUAINTED WITH OWEN FARMS.—It will pay you to get acquainted with Owen Farms. Get their catalogue and read it carefully and see if it is not almost like a visit to a complete poultry plant. Write to them for information and then judge for yourself as to whether our Mr. Owen and our Mr. Delano have not apparently done their very best to help you and, perchance, if you ask for advice (which we are always ready to give) see how often it happens that the advice given you is manifestly to your own interest rather than to the interest of Owen Farms.

BUFF ORPINGTONS.—When "I fell in love" with the Orpington during an eight years' residence in England it was not love at first sight. I think that somewhere back I must have had progenitors from Missouri. All England was apparently convinced of the Orpington's surpassing excellence. I could see that by the shows and their poultry papers. I wanted to know the reasons why they were such grand birds. So I set about finding out. I tried them out as layers and they answered every question. They commenced to lay early and kept it up right through the year. I found it easy to raise them. They were hardy and they grew as fast as I had ever known birds to grow. They bred well and true. The eggs were always fertile. They were good mothers and my hatches were large. Finally I ate them and I found their flesh to be better than any poultry I had ever tasted. Then I studied the Orpington and with all the enthusiasm I possessed I FANCIED them. Every day since I have grown to like them more. There was no breeder of any importance that I did not come to know personally and as expense did not stand in my way if I did not get the best England had

free range, has a liberal supply of grain, mostly best grade wheat, plenty of clabber milk to drink, also plenty of fresh water, and is running with ten hens of like variety. This cock eats hearty, crows often, seems active and attentive to the hens, but every now and then I notice his comb turns dark and slick-looking; that is, the back part of it, up to about the first point. As I said, this cock seems to be in perfect health outside of that. Could you tell me the cause? If so, a cure? And would it do to breed from him in this condition if he does not get anything else wrong, or would you advise me to get another cock, or would it be better to have a cockerel, as the hens are yearlings and two-year-olds?

Berry, Ky. O. L. S.

Answer.—There does not appear to be anything serious the matter with this bird, and we would suggest a few applications of carbolated vaseline. If this does not brighten up the comb properly, give him one of Carter's Little Liver Pills every other day for a week. He will, no doubt, be all right to breed from the coming season.

Question.—Please advise me, through the "Questions and Answers" page of your paper, a good recipe for disinfecting incubators and brooders.

Ozark, Ark. G. A. A. D.

Answer.—Sulphur is one of the best known disinfectants. Place a small amount of it in an iron dish and touch a match to it. Place inside machine for a few minutes, after which thoroughly air the machine.

Question.—(1) What is the name, cause and remedy for the disease where the fowls have a rattling or gargling

in their throats? Yellow water with very bad odor runs from their nostrils. They eat very well. (2) Please give remedy for disease where a very slimy, bad-odored water runs from nostrils and mouth all the time, so bad they can hardly eat. They linger a good while before they die. (3) Please give recipe for lime-wash. Should it be used on outside of house? How often should it be used? (4) Are watermelons good for fowls?

Georgia. N. N. H.

Answer.—(1) Roup. Procure some one of the various cures advertised in these columns and use as directed. (2) This is the same disease in a more advanced stage. (3) Read answer to R. V. W., this issue. This cannot be used on outside of building to advantage. The inside of buildings should be whitewashed three or four times a year. (4) No.

Question.—(1) Please give a good formula for mash feed to be fed on winter mornings; also what to feed at noon and night. (2) I had a yearling hen go totally blind, without any apparent cause. Could it have been caused by other hens picking her on head? (3) What is a good remedy, that can be easily and handily given, for a slight cold in a bunch of chicks? (4) Would a cinder bedding on a poultry run in a city lot be as sanitary and suitable as a gravel one?

F. E. V.

Decatur, Ill.

Answer.—(1) Oats, 15 pounds; corn meal, 5 pounds; bran, 5 pounds; shorts or wheat middlings, 5 pounds; clover meal, 10 pounds; meat meal or cut green bone, 10 pounds, making 50 pounds of a dry mixture. For a flock of 25 hens give four pounds of this mixture each morning, made into a crumbling mash by wet-

ting with water or skim milk if obtainable. At noon give one quart of wheat and at night one quart of corn. The noon and night feeds should be given in deep litter and the grains can be alternated, giving corn and wheat one day, and wheat and oats the next, or corn and wheat. (2) We are unable to say. (3) Melt a lump of lard the size of an egg, to which add three tablespoonfuls of kerosene oil. Give a teaspoonful of this mixture to each bird twice a day for three or four days. (4) Yes.

Question.—(1) How big a house and yard does it take to accommodate about seventy-five hens? (2) Will building blocks be as good as lumber for building colony houses, and what are the plans for building colony houses for forty or fifty chickens each? (3) What kind of chickens make the best broilers? (4) What is the best time of the year to hatch them? (5) How old should chickens be before sold for broilers?

Port Homer, O.

T. C. H.

Answer.—(1) A house 18x30 and a yard twice this size. (2) Colony houses should be built of lumber and so arranged that they can be moved from one location to another. Our book, "How to Build Poultry Houses," will give you information on this subject. (3) This is a matter of opinion and is a question we do not answer. (4) Broilers can be hatched at any period; but the best prices are obtained in the spring and early summer. (5) From six to ten weeks.

Question.—(1) State in what proportions corn, buckwheat and millet should be mixed for laying hens and growing chicks, and would you add anything else?

FARMS : ARE YOU?

I am mistaken. That I did is well evidenced by the fact that ever since Orpington breeders in this country have again and again ransacked England, buying here and there to beat me in New York and I am bound to say without success. We have this year the following to offer you: Grand color, which is an inheritance, not an accident; good heads with combs not too large, fairly smooth, well set, and serrations close to standard; grand type; large birds, as low down as any English breeder or judge would desire; in fact, Buff Orpingtons that are not to be beaten either in this country or in England. One thing I want to say. In England the Orpington is called a majestic bird and the type originated and demanded is not too low down. He should never look squatty. He should look rather low on account of his size and massive proportions rather than because he is actually short from his hock to the ground.

Owen Farms can and will sell you Buff Orpingtons that are as near right as they can be found and at the fair price.

BLACK ORPINGTONS.—We have them, and good ones, but we can not use the space to describe them here. You will find them in our catalogue.

WHITE WYANDOTTES.—Every one at Madison Square Garden last winter who saw our 1st pen of White Wyandottes said that it was the best five birds in this variety ever exhibited. We added four more females to it, equal to the four exhibited, and from this pen we have raised a large number of chicks that are simply wonderful in type, color, and head; birds that I truly believe will score higher than any birds we have ever seen. Our 1st Chicago last year sired two of the best birds at the New York Show and many others winning all over the country. This year he has been breeding better than ever and we even now think we have the winner for New York this winter sired by this bird. Our 1st Boston this last year was another grand sire. All through our matings we have birds way ahead of any previous year. I am saying this to fanciers. You know that good birds do not come by chance breeding. It takes good matings to produce nearly perfect type, color, head, eyes, and station, and if you get birds of that class into your pens YOU CAN DO IT JUST AS SURELY AS WE DO. We will sell you White Wyandottes of that class and at fair prices. You can win with them and you can breed them. Don't think that all our White Wyandottes are high priced. They are not. They are all of our best blood, but we have grand birds for \$7.50, \$10.00 and \$15.00. These birds are much better than most birds at these prices and you can not help but get important advances in color, type, head, eye and comb, which are characteristics of the blood lines. Then they answer two important questions, they lay grandly and they breed well and true. I feel strongly concerning our White Dottes and when one is sure they are right it becomes almost impossible to stop writing about it. Oh, if I could only prove in some way beyond question that our White Wyandottes are in advance of any other strain! Our winnings at New York, Chicago and Boston help, but I see the birds themselves daily and then I feel that enough has not been said.

WHITE ROCKS.—Have you seen Owen Farms' Exhibition Record in White Rocks for the past ten years? It is in our catalogue, yours for the asking. There is no other record in this variety that approaches it. I dare to say it, and I will, that there is no flock of White Rocks in this country that approaches that on Owen Farms for General Excellence.

(Continued on Next Page)

(2) Please state a good formula for a morning mash, and how to mix same. (3) Please give a recipe for white-wash, and should it be mixed with warm or cold water. (4) How many hens can be kept in a house 6x8 feet, 7 feet 6 inches high? R. V. W.

Stittville, N. Y.

Answer.—(1) Corn, 2 parts; millet, 1 part; buckwheat, 1; to this add 2 parts wheat and 2 parts oats. (2) Read answer to F. E. V. in this issue. (3) Slake a half bushel of lime in boiling water, after which strain it to remove all sediment. Add two pounds of sulphate of zinc, one pound common salt and a half pound of whiting thoroughly dissolved. Mix to proper consistency, with skim milk if possible, and if not, use hot water. Stir in thoroughly a half pint of liquid glue and apply the wash while hot. It may be colored if desired by using yellow ochre, ultramarine blue, lamp-black, etc. It will compare favorably, both in appearance and durability, with a good quality of paint. (4) Eight.

Question.—(1) How many chickens will a poultry house 12x36 accommodate? (2) How big a poultry house will it take for twelve chickens? (3) Out of a setting of eggs I have eight young ducks; will I have to get a new drake or use my young drakes? (4) Can you use leg bands on ducks? (5) Is there a book on Indian Runner duck? J. P. P.

Alger, O.

Answer.—(1) About 75. (2) 8x10. (3) The young drakes may be used for the first season. (4) Yes. (5) Not that we know of.

Question.—Where can I obtain small

boxes to hold one dozen eggs, with my name and address printed on them.

Lorain, O.

L. E. W.

Answer.—Sefton Mfg. Co., 1153 35th street, Chicago, Ill.

Question.—(1) We are building a poultry house 12x35 feet in the side hill. The back and two ends are of stone work, the front facing the south will be lumber and windows. In one end an incubator room 6x12 feet separated from the rest by a stone wall 6 in. thick, then three pens 8x12 and a feed-room 6x12 feet. What is the best ventilating system and where can I get plans. (2) How many hens will a pen 8x12 accommodate in winter.

Fairchild, Wis.

J. E. S.

Answer.—(1) One of the best ventilator systems may be made by hinging the windows at the bottom, allowing the top of windows to open inward. This will prevent any direct draft on the fowls and the fresh air will come in at top of room where it should and drive out the foul air which gathers at top of room. (2) About 16 birds.

THE POULTRY SHOW, IOWA STATE FAIR, 1909.

By Amos Burhans.

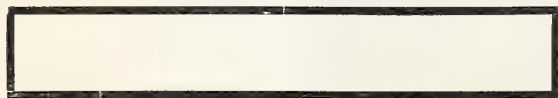

THE state of Iowa did herself proud in the poultry show exhibit of her this year's state fair. While there were a few of the breeders that could not get their birds down to the show, most of the prominent fanciers of the state were on hand with a good line-up. In the leading varieties there was a big showing of mighty good birds. The management has provided good cooping on the Empire plan, and this made the

exhibit look better than it ever has. Where birds are cooped singly it is much easier to judge them and to keep track of the worthy birds.

The judging was done by the old Iowa standbys, W. S. Russell and F. H. Shellabarger. These men give the best of satisfaction and have done their work with a view of getting the best birds in first place.

The Iowa state school of agriculture poultry department, in charge of Mr. Pierce, who is at the head of this department, made a grand exhibit of the work that the school is carrying on in this line. They are working along very practical lines at Ames, and some of the results were tabulated and greatly interested the spectators. Models of some of the poultry houses and the appliances in use in them were on exhibition, and the farmers who were giving any considerable attention to the poultry end of their farms spent a great deal of time inspecting them and getting information, which the men in charge of the exhibit were only too glad to communicate. This school has been working along the lines of heavy laying and been doing some trapnesting among their flocks. The picture of one hen, band 602, a Barred Plymouth Rock, was hung in the exhibit and attracted much attention. During her first laying year she laid 210 eggs, as against the Iowa average of sixty-four eggs per hen per year. In one basket was placed an exhibit of sixty-four eggs, and beside it there was another basket containing 210 eggs to represent the number laid by the hen 602. Incubators and brooders completed the exhibit. This is the first exhibit of the kind ever seen in the West, and probably other schools will follow

WE ARE READY

OWEN

First, they are the whitest flock in the country, naturally so, bred so, and they can't help being so year in and year out. Sun does not change them, and creaminess is not known there. The quills will make any other quills look creamy. You may have the satisfaction of knowing to start with that you can not be beaten on color if you have Owen Farms blood pure and straight. Next comes head and head points, concerning which Mr. Delano says I am almost a crank—I hope I am not quite that). I believe that poultry like women are first judged by their head. This must be what we call handsome in a woman. There must be no angles. The "comb" must set on the head at the right angle, be not too large and as near the ideal as possible. Over the head and down the back of the neck it must take a beautiful curve. There must be no break in this curve. The front of the neck, also, must be full and perfect, curving into a full round breast. The eye must be bright red and have fire in it. The head must give you the impression that the bird is all right. He must be deep and long of body and rather level, standing up just high enough on good legs, well spread apart and as yellow as possible. Then, the back and tail must answer the last and, perhaps, most important question. It must be broad and level with no break at the saddle and the hangers must be long and graceful and finally curve up to the proper angle. Then style, condition, and coop training make a winner. Now, may I say just what I think? I will, anyway. If any one buys a White Plymouth Rock without first learning all he can about Owen Farms birds and finding out if they can give him what he wants at his price he actually does himself a great hurt. Always you are allowed to be the sole judge of whether you are satisfied. If not satisfied you may return after two days' examination and your money will be promptly returned. If you wish to show the birds you purchase we fit and get them ready. Our hat is ready to come off to anyone who will do it better than we do.

BARRED PLYMOUTH ROCKS.—Talmadge, the noted divine, once said that undoubtedly the Creator could have made a better berry than the strawberry but he doubted if He had tried. So I say about Barred Rocks. Possibly some one may make a more difficult variety of poultry to breed than the Barred Rock, but I have honest doubts about it. It is this great difficulty in breeding Barred Rocks up to our ideal and standard that gives Barred Rock breeding its most decided charm. Think what you have to add to the White Rock. You must have the same perfect head, eyes and comb, with nearly perfect outline, the same perfection of back and tail. All of these excellencies must be present and in addition proper barring in every feather of every section. The bars must be of the right width and clear. The darker color must not run into the light color. Each point must be tipped with an edge of black. And then all these feathers must overlay each other so as to give the snappy ringy appearance so much desired and also give a total effect of color that is exactly of the right shade. Owen Farms Barred Rocks represent years of effort in bringing their males and females to near perfection. The whole country concedes that the great yearly battle in Barred Rocks is fought out at Madison Square, New York. During the last ten years our Barred Rocks have won more than 30 per cent of all the 1sts and 2nds awarded there. A Grand Record, is it not? We have today in the male line Cock birds and Cockerels that are able to win in any show and many of them. Also breeding birds that will advance you years in getting results. We have also many Hens

the example set. Every state school should go ahead along these lines, as the interest in such an exhibition will further the work of the school and make it in position to get greater returns and hence enlarge its scope of work and operation.

The city of Des Moines is working hard to make its next state show a big success. This city was fortunate in securing the state show for the coming winter, and the business men of the city have promised to have the new coliseum house the show if the building is completed. This is a fine show building and will permit of all the cooping on the single deck plan. The lighting of the building is good, and its heating will be by some system that will assure all the evenness of temperature possible. We will give the dates of the show in another column.

During the fair the Iowa State Poultry Association met to discuss the advisability of forming a league of associations of the larger exhibitions and form a circuit so that dates would not conflict and they could secure better judging service. Representatives of some of the biggest associations were on hand to make known their views and talk over the work that has been done in forming leagues in other states. The chair appointed a committee to draft a constitution and by-laws and report at the next annual meeting of the state association in Des Moines, and the breeders from other associations are to get in touch with the sentiment in their sections and all work to arrange a better circuit of shows than that now afforded.

Notes of the Exhibit.

E. G. Roberts was on hand with one of the best strings of birds he ever made the fairs with, and was in at the

finish with a string of ribbons that looked like a bale of silk. Earl has always been a good showman and takes his losses in much the same quiet way in which the blues are received.

James Shannon, Sac City, won first cockerel in the Barred Rock class, on a nice bird. He also won second pullet and the rest of his display showed the same high-class excellence.

W. A. Hartman, Winterset, never lets a state fair go by without coming down and bringing some good birds with him. He won second on a Barred Rock hen that was good all over. Mr. Hartman is one of the oldest Rock breeders in the West, and more especially of Iowa.

J. L. Todd, Des Moines, one of the old-time breeders of Barred Rocks and Golden Wyandottes, was out to the fair looking over the winners and getting into the affairs of the state association. He tells us that he is well fixed in the way of young birds and will be in the fancy stronger than ever. Mr. Todd says he has permanently located at Des Moines on ground enough to grow some good birds and small fruits.

There was a good class of White Rocks out to face the judge. J. T. Perry won first cock, and F. H. Holloway won second and fourth. In pullets, Holloway won first and second, and Walter Perkins third. Charles E. Wayman won first hen, and second and third went to F. G. Cutler. Holloway won first and second pullet, and third went to the Hunkydory farm, at Pella.

Buff Rocks were a nice class, with some real quality. Joseph Dagle, Richmond, captured second hen, first and second cockerel, while third went to C. U. Hoode, Des Moines. The latter also won first and second pullet, and third

pullet went to C. S. Adams, Packwood.

Silver Wyandottes were shown in good numbers and some of the females looked in excellent plumage for the time of year. C. J. Eden, Manning, won first and second cock on two good birds. F. W. Johnson, Luther, won third cock and showed some good spring birds, though they were a little young. F. F. Warner, Bloomfield, showed some great cockerels, winning first and second, as well as third hen and pullet. Perkins' first hen was a top quality bird. W. A. Marner, Miles, took first and second with a grand pair of pullets, winning third hen and cockerel, too.

Golden 'Dottes were a choice showing in themselves. A. L. Anderson, Indianola, was successful in winning first cock, first and third hen, first and second pullet. Warner took third cock, first and second cockerel, second hen, third pullet.

T. F. Bond put up a grand line of White Wyandottes, winning first and second cockerel, first cock, first hen, first pullet.

In Buff Wyandottes, several breeders divided the honors. Anderson, Warner and Roberts each had out some good birds and won towards the top.

Partridges were a good class. F. F. Warner and J. G. Berry, Indianola, and some few other exhibitors showed a classy string, dividing the winnings among them.

In Silver Penciled Wyandottes, Warner and Roberts had things their own way.

Single Comb Reds were a good class. E. B. Cramblitt, Ames, won second cock, first hen. C. A. Kenworth, Des Moines, first cockerel, first pullet. F. M. Finkbine, third cockerel, second hen. W. F.

FARMS : ARE YOU?

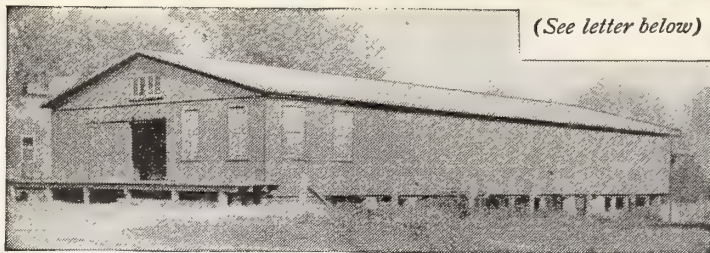

and Pullets ready for showing and breeding that will not be beaten anywhere. At New York our 1st pullet took the Shape Special. We always combine in a female wonderful barring and most perfect type and size. And, lastly, our Prices are Right. My experience says in addition, if there is any bird I want to see before I call the purchase complete it is the Barred Rock. This you may always do with Owen Farms. Send us fearlessly the amount you want to spend and a careful description of what you want. We will send it; give you two or three days to examine and rest; and, if you send it back, we do two things: First, pay the return express charges; 2nd, return your full money. Knowing what it means to the bird to go a journey and return, don't you see how careful we must be to give you a little more than good value?

LETTER WRITING.—I wish to thank our friends for writing many letters to Owen Farms of late that have allowed us to quote them on just what they wanted and without delay. One writes: "Please describe to me the best young trio in Buff Orpingtons you can send me for \$35.00. I wish to show them at the show at, held on the 4th of December." Another writes: "I want to win 1st cockerel and 1st pullet at, on November 8th, in White Wyandottes. I can afford to pay \$25.00 for the cockerel and \$15.00 for the pullet. Can you send me birds at these prices that you think will surely win?" Still another writes: "I want a first class breeding trio of White Rocks that will produce young birds good enough to win at Pittsburg." While still another writes: "I have grand birds in the male line of Barred Rocks; good size, splendid barring, and exhibition color, but my females lack size and a little in shape. My color is near the standard. What can you send me for \$15.00 in a pullet breeding male that will correct these faults?" It is a great pleasure to answer letters like these because we know what is wanted. Do not hesitate to write us your full wants. Both of us will gain a lot of time by being frank.

Do you really know what it means to you to place your orders early? We have a large number of birds and we are constantly selecting and growing and conditioning birds for the fall and winter shows and if we have your orders placed with us for future delivery we select the birds and handle them, train them and get them absolutely fit for the time when they are to be sent you. On all early orders for future delivery 25 per cent only of the amount to be paid is required in advance, the balance to be paid just before shipment. I ask each interested reader, "If you receive an order to be executed in advance can you not give better satisfaction and do you not consider it an advantage to the buyer?" If you answer "Yes" are we wrong, then, in urging you to enter into correspondence with us at once to find out what we will do and place your orders early?

Catalogues sent with full information free. Please be particular to always indicate the BREED you wish and we would also thank you to always give credit to the journal in which you see our advertisement appear. Always address

Owen Farms Wm. Barry Owen, Prop.
Maurice F. Delano, Mgr. **Box A, Vineyard Haven, Mass.**

Keep Roup Out of Your Poultry Yard!

It takes quick action and a sure remedy to save your flock, once this deadly and highly infectious disease makes its appearance. One sick bird will infect the entire poultry yard—there is no time to experiment with unknown and untried "Roup Cures."

CONKEY'S ROUP REMEDY

has stood the test for years, and thousands of poultry raisers everywhere know that it does the work. A little now and then in the drinking water of the well fowls will insure your birds against Roup; and the worst cases yield readily to its healing influence.

One 50c Box Makes 25 Gallons of Medicine

Get a package of Conkey's Roup Remedy, and put a thimbleful in the drinking water. Let your fowls drink all they want. It's no trouble to treat the whole flock; results are quick and sure.

You Can't Afford to Take Risks!

An outbreak of Roup may occur at any time. You are never safe unless you keep a package of Conkey's Roup Remedy on hand, and use it occasionally to keep your fowls in perfect health.

Poultrymen everywhere send in the verdict that Conkey's is the only real preventive and cure for Roup in existence. We have such great faith in it that we unhesitatingly offer you

Your Money Back if it Fails

If you buy a box of Conkey's Roup Remedy and it fails to do the work, we **refund the money** on receipt of the empty box. We send you the cash by return mail and ask no questions. Price 50c and \$1 postpaid.

Get a Copy at Once! Just Off the Press! Going Fast! Conkey's Poultry Book!

New 1910 edition, revised and greatly enlarged. Every owner of fowls should have this book in the house. Tells you everything you ought to know about poultry. Filled with valuable information that obtained in any other way would cost you hundreds of dollars and years of costly experience. The whole subject of Housing, Feeding and Care of Fowls, How to Increase Egg Production, How to Secure the Largest Percentage of Healthy Chicks—**everything** is covered by experts.

Remember, we want to send you this great money-making, money-saving book **absolutely free**. Just send us your poultry-supply dealer's name and 4c in stamps for postage. **Do it today.** We had a large edition printed, but the enormous demand is rapidly exhausting it.

If you can't obtain our remedies from local dealer, write direct to us.

THE G. E. CONKEY CO.—The Conkey Laboratories (5)
Dept. 18, CLEVELAND, OHIO

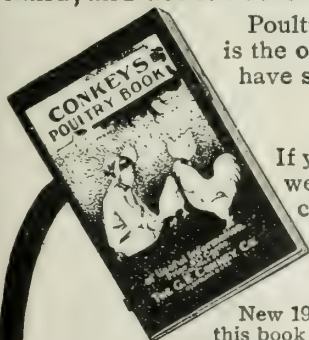

Conkey's Poultry Remedies

are used by up-to-date poultry raisers all over the civilized world—recognized everywhere as the safe, reliable means to keep health in the poultry yard.

We make a specific remedy for each disease. Every poultry ailment is covered by our list. Prompt and intelligent treatment with Conkey's Poultry Remedies will insure you a vigorous, healthy flock.

Following is a partial list of our most widely-known remedies:

Conkey's Roup Remedy
Conkey's Bronchitis Remedy
Conkey's Cholera Remedy
Conkey's Gape Remedy
Conkey's Chicken Pox Remedy
Conkey's Limber Neck Remedy
Conkey's Scaly Leg Remedy
Conkey's Rheumatic Remedy
Conkey's Healing Salve
Conkey's Poultry Laxative
Conkey's Poultry Tonic
Conkey's Flea Salve
Conkey's Sulphur Candles
Conkey's Head Lice Ointment
Conkey's Lice Powder
Conkey's Lice Liquid
Conkey's Laying Tonic
Conkey's Nox-i-cide

JUST LIKE HUNTING OR FISHING.

MANY make a great mistake in raising too many chickens on a small piece of ground, and at the end of the season they have a lot of culls. Raise a few good birds, keep them clean. Be systematic about feeding them, and you can make them pay, even when grain is at the highest.

Now the breed of birds I would suggest is the Rhode Island Red Rose Comb. I have raised Indian Game, Barred and White Rocks, Black Langshans, White Wyandottes, Buff Cochins, White Crested Black Polish; but none of them gave me the results that the Reds have.

My Red pullets begin to lay at five and six months, and when they get started, keep it up the whole winter, when eggs are the highest. I have no trouble in selling good birds, or eggs for setting.

I entered seven birds in the show this year and got seven ribbons. Prizes on Reds and Indian Games. For all they are a hard bird to breed to color, the off color birds you can utilize, as they make the finest broilers. I have some fine stock in Indian Game, and they also make fine eatable fowls.

I had a Rhode Island hen last summer that laid two, very peculiar eggs. The eggs were about the size of a goose egg, and I supposed that it was a very large double-yolked egg, but on puncturing the end found that after shaking out the contents, which was all albumen, it contained another egg with a perfect shell. On puncturing the second shell I found it contained both the yolk and albumen, and I have both the eggs, one inside the other, intact. This thing has happened before, but very seldom.

I am an agent for this journal, and though it is sometimes discouraging, there is something about canvassing that is like hunting or fishing. You never know when you are going to get a shot or bite, and as I am interested in both hunting and fishing, it makes it easier for me to canvass. Sometimes you may go for a long time without getting a subscription, and then you may get several all at once, and that will spur you on again. Then again a man never ought to try to sell an article or book that he cannot conscientiously recommend. If you have faith in a thing, it will help you in making sales.

I think that the American Poultry Journal is a very good paper, and anyone who buys it gets the worth of their money out of it.

I myself take a good deal of interest in the ads alone, besides the information you obtain from the reading.

Arthur S. Johnson.

HAIL, THE CONQUERING HERO COMES!

Stewartstown, Pa., Aug. 30, 1909.
American Poultry Journal Pub. Co.

Gentlemen: I received the pony outfit for winning the subscription contest and I am very well pleased with it. I only used my spare time in soliciting, and it was only good pastime for me. As I am employed as fireman on the Stewartstown railroad, it gave me a good opportunity to solicit at both ends of the road. I wish to state that I won first prize without losing any time at my work. Accept my thanks for your fair

and courteous treatment. The Poultry Journal is proving very satisfactory and will remain a permanent institution in this section.

Very truly yours,
C. E. Hartman.

Mr. Hartman broke all previous records for the amount of subscriptions sent in by one agent on any one of our ten contests.

He sent in his first six subscriptions on Feb. 9, 1909, received a copy of the book, "Origin and History of All Breeds of Poultry," for these six, and then went after one of the grand prizes.

Winning the first prize, a \$250 pony and cart outfit, which was secured from Breeder George A. Heyl, Washington, Ill., and with which Mr. Hartman is highly pleased, was the partial result of this effort.

Not only was Mr. Hartman successful

C. E. HARTMANN.

Winner of the first prize in our last subscription contest.

in winning this prize, but he also won several twenty-year gold watches which were offered as special prizes each month. He tells us how he did it in the following letter:

EASY AND PROFITABLE PASTIME.

Stewartstown, Pa., Aug. 11, 1909.

I will endeavor to give my experience in soliciting for the American Poultry Journal. I first started out to get six subscriptions for the new book called "Origin and History of All Breeds of Poultry," and behold, when it came, why here came a list of the prizes to be given out for the largest number of counts sent in during the contest. I looked it over carefully and decided to go right after one. So I just stuck a Journal in my pocket and started to work, asking every person I came across, and I found it no hard task to secure the counts which won first prize. I would look carefully over the Journal and explain what was in it and next I would write him up, either for one or three years. Some days I

would get as many as thirty names and get them all between working hours. Perhaps the next day I would not get so many.

But whoever goes out soliciting for the American Poultry Journal will not go amiss, as it certainly is the best poultry journal that is bound between two covers. As I am a breeder of White Orpingtons and also a new beginner in the business, it was a delight for me to solicit for the American Poultry Journal. I think it taught me many interesting points that perhaps I would have had quite a time finding out. Experience is what I want, and that is what the American Poultry Journal will teach you.

C. E. Hartman.

Stewartstown, Pa.

ANOTHER OPPORTUNITY.

Our great fall subscription contest has just opened. It closes Dec. 31, 1909. Send for full particulars today. It will be mailed to you free. See list of grand prizes on another page of this issue. A little talking in your spare time will pay you well.

ALL WELL SATISFIED.

York, Neb., June 30, 1909.

American Poultry Journal.

Gentlemen: Please pardon my long delay in answering yours of the 21st inst. I received your unexpected prize and must say it was more than I expected, as the premiums you sent at different times, for subscriptions I sent you, more than paid for my trouble and little time I spent. It was surely a square deal. Wishing you success in every way, I am

Yours very truly,
Fred Strobel.

Fordham, N. Y., June 26, 1909.

American Poultry Journal.

Gentlemen: In reply to your favor of the 21st inst., would say I received the drinking fountain sent me as winner of the sixty-ninth prize in your tenth annual contest.

I wish to express my thanks for same and I think it a very nice prize for the work I did. If I am spared to take part in your next contest I will make a greater effort to win a larger prize.

I find your journal a great help and I wish you all success.

Remaining respectfully yours,
G. H. Listhardt.

2406 Creston Av.

Ewing, Ky., July 5, 1909.

American Poultry Journal,
Chicago, Ill.

Gentlemen: Many thanks for the drinking fountain you sent me as my prize for securing thirty subscriptions to your journal. I also wish to thank you for the two poultry books and brush set which you sent me as special prizes.

When and wherever I shall have an opportunity to speak a good word in your behalf, rest assured I will do so.

Very respectfully yours,
Elmer S. West.

Kewanee, Ill., July 24, 1909.

American Poultry Journal Pub. Co.,
Chicago, Ill.

Gentlemen: I have been out of the city for some time, hence the delay in my writing and thanking you for the

watch I received in your subscription offer. It is certainly a fine watch, and far above what I expected to receive. Have heard many flattering comments on your paper from many of the new subscribers I sent in. All are well pleased with it, and I expect to get their renewal next year.

I have no photo of myself at the present time, else I would gladly send you one. Respectfully yours,

Jas. S. Bremner.
Lisbon, Ohio, Aug. 1, 1909.
American Poultry Journal.

I received setting of eggs and very well pleased with them. I got a good hatch, considering the distance they came. Nine chicks came out of the setting, so think that is pretty good.

Respectfully yours,
H. A. Green.

A FEW WORDS MORE.

We have a great many more letters in our files on the same order as these. We publish them to satisfy the most skeptical

JAMES CHRISTOPHER,
Winner of Sixtieth Prize in Our Tenth Annual Subscription Offer.

person that our contest is strictly on the square.

We want you to send in as many subscriptions as you can. Premiums given for two subscriptions. Six subscriptions entitle you to one of our grand books, "Origin and History of All Breeds of Poultry," besides the regular premiums.

Do not miss this opportunity but send a post card for complete offer today, to American Poultry Journal, 358 Dearborn street, Chicago, Ill.

Mr. Arthur D. Brandies, Omaha, Neb., member of the firm of J. L. Brandies & Son, owners of the great Brandies department store, has a very handsome summer home near Omaha and on it is thoroughly equipping a poultry plant on a large scale. His poultryman is a graduate of some of the largest farms in the east and the idea is to grow some choice market stock as well as to perfect a heavy laying strain of White Leghorns that will do for the hottest competition in the showroom. We shall visit this plant at some early date and write more about it, as it is well worth chronicling.

Don't Judge a Roofing By Its Looks

On the surface, most ready roofings look the same.

But the weather finds the hidden weakness.

The weather finds the vegetable fibers in the fabric and rots them.

The weather finds the volatile oils which are concealed below the surface. The sun draws these oils, in globules, to the top of the roofing, where they evaporate in the air.

Where there was a globule of air, there remains a hole. And behind each hole is a tiny channel which lets the weather and water into the very heart of the roofing.

When the sun and the wind and weather have sought out the hidden weaknesses, the roofing is porous, instead of solid; watersoaked, instead of waterproof.

You can't tell by looks, which roofing will last twenty years, and which will go to pieces in a single summer.

Seventeen Years of Service

But you can do this: You can tell the original Ruberoid roofing—the only roofing which has lasted seventeen years—from the 300 substitutes which have proven their unworthiness.

Ruberoid was the first ready roofing. Its basis is the best wool felt impregnated with Ruberoid gum.

It is this wonderful flexible gum which no other maker can duplicate.

RUBEROID

(REGISTERED IN U. S. PATENT OFFICE)

Be sure to look for this registered trademark which is stamped every four feet on the under side of all genuine Ruberoid. This is your protection against substitutes which many dealers brazenly sell as Ruberoid. Ruberoid is usually sold by but one dealer in a town. We will tell you the name of your Ruberoid dealer when you send for our free book.

THE STANDARD PAINT COMPANY, Bound Brook, N. J.

New York, Chicago, Kansas City, Boston, Philadelphia, Memphis, Atlanta, Denver, San Francisco, Montreal, London, Paris, Hamburg

It is this gum which gives Ruberoid all the flexibility of rubber without containing an iota of it. It is this gum which withstands wind, weather, sun, fire, acid, gases and fumes, where all other compounds fail.

It is this gum, in the Ruberine cement which accompanies each roll of Ruberoid roofing, which makes ours practically a *one-piece* roofing—sealed against leaks—sealed against the weather.

Ruberoid comes plain and in colors. The attractive Red, Brown and Green Ruberoid are fine enough for the costliest home. And the color feature is exclusive—protected by U. S. and foreign patents.

In the past twenty years we have had experience not only with all ready roofings, but with other roofings—shingles, tar, tin, iron and other roofings.

We Test All Roofings

Each roofing we have exposed to the weather test, on our roof garden at Bound Brook, N. J.

The result of these twenty years of tests we have written into a book which will be gladly sent you free.

This book is a gold mine of roofing information, telling about the advantages and disadvantages of each roofing for each purpose. To secure a copy, address Dept. 77F The Standard Paint Company, 100 William Street, New York.

Huffman's Bluettes Barred Rocks

WINNERS—And breeders in old stock and young birds bred from winners for sale. My stock and birds hatched from my eggs win for me and in the hands of my customers. WHITE ROCKS

200 head to choose from, fine as silk, up to standard requirements, bred from winners. Fine type, long back and correct tall carriage, will make them hot contenders at the coming shows. I can supply you with either old or young stock at reasonable prices. Write for them. Mention A. P. J.

GUY DAILY : JEFFERSONVILLE, INDIANA

ASSOCIATIONS AND SHOWS

Secretaries are requested to send in news items of interest about their show for this department.

THE NEW YORK STATE FAIR.

An Exhibit of Nearly Four Thousand Birds—The Largest Show Ever Held, With Quality Very Choice—The Management and All the Arrangements as Good As We Have Seen.

The Sixty-ninth Annual New York State Fair was an event the future will be troubled to excel. The entries in every department exceeded all previous records in both numbers and quality, variety of all kinds were here and the display complete in every detail. The new buildings erected since last year were a feature and the poultry department is promised a new building for next year, and we were told the appropriation has been made.

The building assigned to poultry this year was much larger than the former one, still large as it is it is still far too small to answer the purpose. There was a total of 3,396 entries, and when we consider the great number of pens shown we can safely say there were well over 4,000 birds shown.

To Superintendent W. E. Gilbert credit is due, his efforts have met with success and have made this wonderful

display possible. Nothing was lacking, every detail had his personal attention, and no exhibitor or visitor had the least possible cause for complaint. We are very glad to report that Mr. Gilbert's health has been greatly improved since last year, and we can well add our hope that health and conditions will permit him to serve for years to come.

Mr. Gilbert informed us that by next year the new building will be finished. This is urgently required and will, we hope, allow single cooping in all classes. The Empire coops are now used, still even these with two or more birds in every coop, and the coops piled two and three tiers high detract beauty and value from the exhibit, at the expense of the exhibitor and visitor as well. We trust the state will let Mr. Gilbert have his say in the matter of size and arrangements of the new buildings. This will insure satisfaction to all patrons.

One of the particularly bright and interesting features was the display in personal charge of Professor Rice from the New York State Poultry Department. We had occasion to call on Mr. Rice several times, and each time found him and his assistants busy with a large number of eager listeners. We highly commend this kind of work. It

will make practical breeders of the now slipshod kind, and from that stage to the fancy is but a step that most of them will see and take.

The Duck Pond, with a rare collection of water fowl by Mr. W. A. Smith, drew the admiration of thousands. Then there also were displays of Pheasants, Peafowls, etc., to be admired. The display pen of Barred Plymouth Rocks shown by Superintendent W. E. Gilbert were a choice collection of chicks as good as we could hope to see at this season. Of rare quality, and of shape, barring and color that meets every requirement. Mr. Gilbert has been a breeder and exhibitor of Barred Rocks for many years, during which time he has made a record of winnings in the best of company.

The classes were all grandly filled with many notable and exceptionally large entries of choice birds. Our folks and their stock were well represented and fared well in the winnings.

The Barred Plymouth Rocks, as is usual in this section, were a feature class for quality. The old birds suffered some from condition, but the quality was very evident in every bird shown.

The Owen Farms, Vineyard Haven, Mass., entered a string of Barred Rocks only and won on Old Pen First, Second, Third and Fifth. Young Pen Second, Third, Fourth and Fifth. Cock second, Third, Fourth and Fifth. Hen First, Second, Fourth and Fifth. Cockerel Second, Third and Fifth. Pullet Second, Third and Fifth. The Silver Cup for best display, etc.

Condition figured largely in these awards. Their cock birds were an extra

SIBLEY'S

R. C. R. I. REDS

FIRST PRIZE [WINNERS, CHICAGO, DETROIT, INDIANAPOLIS AND BUFFALO, 1906-7-8-9. IRVING A. & FRANK CHURCHILL SIBLEY, PROPS.

At Detroit, Mich., Jan. 9-14, '09, we won

first, second, third and fourth on cocks. First, second, third and fourth on hens. First, second, third and fourth on cockerels. First and fifth on pullets. First and second on pens. The four club specials for color and shape. The silver loving cup (valued at \$25) offered by the mayor of Detroit for the best display of either Rose or Single Comb Rhode Island Reds. The silver loving cup (valued at \$20) offered by the Hotel Normandie for the best display of Rose Comb Rhode Island Reds. One cut glass celery dish, one cut glass vase, one silk umbrella, together with several other special prizes.

Our patrons, both of eggs and birds, are winning first prizes all over the United States, Canada and Mexico.

We have raised nearly 3,000 young birds this year (the best we ever had) and shall have a choice lot of young stock for sale, both for breeding and exhibition purposes.

Our Fall catalog is now ready. Our mating circular for the season of 1910 will be issued about Feb. 1st. We shall be pleased to send either on request. Address

Min-ne-ha-ha—1st prize winner, Chicago, December 16-19, '08. Detroit, January 9-14, '09. Said by many to be the best Rose Comb Rhode Island Red pullet shown during the season of 1908-9.

KITSELMAN BROS.,
Box 295, MUNCIE, IND.

choice lot, and in full feather a different story would be told. Their cockerels and pullets were rather young and immature for State Fair company. Mr. Newton Cosh had charge of the display and was also one of the judges, taking the Orpingtons, Hamburgs, Polish, Buff Leghorns, etc. Their First Prize Hen was the gem of the entire show. Her wonderful color and barring, along with her grand size and shape, strong eye, etc., make her one of the most desirable females we know of. The Second Hen was close up, with all that is required in an exceptional show hen. Their winning of First, Second and Third on Old Pens is a record for this show that stands out as a strong feature in a class all alone; we fail to remember of ever seeing three such pens mated at this season of the year. The quality was very even in all, and of the very highest.

Mr. Jonas Hayner, of Livingston, Col., County, N. Y., did extra well, in fact so well that he spoke of it in his sleep (so we were told). He won on Old Pen Fourth. Young Pen First, Cock First, Hen Third, Cockerel First, and First and Third Pullet. Mr. Hayner has

DELMAS.

First prize R. C. Black Minorca cock at Jamestown Exposition. Owned by Minorca Range, Big Rapids, Mich.

been there before, and he did have his birds just right and at their very best. His First Cock was in January form, and a grand, good one, too, while his First Pullet was a beauty, to say the least. His entire display showed rare quality and was in the pink of condition, all his females are worthy of special mention, the shade of color and the style of barring were exquisite.

Other good birds were shown by E. L. Bisbee, C. A. Phillips, Elm Poultry Yards and C. H. Crawford.

Buff Rocks were a strong class, here we found several noted breeders and winners that we have handled before. The White Rocks were only a fair-sized class, but with real good birds.

White Wyandottes were no exception to the rule, as shown here before. Canada again favored us with her best. It was fine picking here for the judge in a large class of quality conditioned to the minute.

John S. Martin, of Port Dover, Ont., had his usual string, winning on Old Pen First, Second and Third. Young Pen First, Second, Fourth and Fifth. Cock First, Second and Fifth. Cockerel First and Fifth. Pullet Second. The Silver Cup for best collection, etc. This kind of a win in this class borders closely on a sweep and the birds were

THE ROOF OUTLASTS the BUILDING

Think of the terrible wear and tear a roof gets! Think of the weather extremes of winter—freezing, thawing—rain, sleet, snow, ice and slush—storms and winds, the beating downpours and burning sun of summer.

No other part of the building is subjected to tests half so severe.

Yet, through it all, **PAROID** Roofing will last longer, without repairs, than any other kind of roofing.

PAROID ROOFING

Among many examples, we point to the U. S. Government Buildings at Havana, Cuba.

These were roofed with **PAROID** (chosen after exhaustive tests) in 1898—over 11 years ago. Neighboring roofs of other kinds have been frequently patched and relaid. But the **PAROID** roofs are to-day intact, and good for many years more. In spite of the fierce onslaught of that climate, these **PAROID** roofs have never leaked—never cost a cent for repairs.

Other Government Buildings

Since testing **PAROID** in Cuba, the Government has used it on hundreds of other permanent buildings in all parts of the world—for it has proved a permanent roofing, in all climates. In one year, 25 carloads of **Paroid** for Government use were shipped to the Philippines. The permanent Government buildings at Panama are roofed with **Paroid**.

The Secret of Paroid

The felt used in **PAROID** is so downright good, that, unprotected, it would last as long as many roofings.

Then the life, strength and toughness of this felt is multiplied many times by the secret preservative compound with which it is thoroughly saturated—every pore filled—sealed absolutely **water-tight** and **air-tight**.

And both sides are coated with a thick, elastic compound which wears almost like slate.

This protecting coating is impervious—shuts out the air, moisture, and all the destroying forces of Nature. It is the air which so soon eats the life out of shingles, tar, and other roofings—dries them out—causes quick decay, cracks and leaks.

This **PAROID** coating is heat-proof and cold-proof—neither melts, blisters nor cracks. It won't catch fire from the flying sparks and brands which so often set fire to other roofings.

OUR GUARANTEE is that we will replace every square foot of roofing that proves to be of defective manufacture. If a stronger guarantee than this could be made we would make it. Dealers everywhere sell **PAROID**.

\$800.00 GIVEN AWAY

Have you sent for our list of grand prizes that we are giving away? If you have not done so, better do it now. Address

American Poultry Journal Pub. Co.
358 Dearborn Street Chicago, Illinois

worth all they received, and more, if anything. Mr. Martin has been with us before, and win of this kind has come to be a habit with him. We hope one of these days to visit him at his home and to report to our readers what we find there.

W. Dawson, of London, East, Ont., was another successful exhibitor here, winning on Old Pen Fourth. Young Pen Third. Cock Second and Fourth. Hen First. Cockerel Second and Fourth. Pullet Third. With an unplaced hen as good as we could wish to see unplaced. This whole exhibit was of a high grade, grandly shown. At the late Toronto Industrial they won three Firsts, two Seconds and one Third, Fourth, Fifth and Sixth, also two cups and two medals.

Other rare specimens were shown by Howard Gould, Mrs. D. G. Gates, Ira N. Gammonds, etc.

Buff Wyandottes brought out one of the largest classes in the show; we were told the number of birds shown—131—equaled the record entry at Boston in 1908. It was a fine collection, just the same, type and color prominent, and we like to refer to these as the Beauty class. The prominent exhibitors here were J. R. Clancy, Andrew Riddell, W. A. Fuller, R. Brooks, Robbins & Son, Mrs. D. G. Gates and W. A. Smith.

The Golden and Silver Wyandottes were good classes, these old favorites stick well and we believe are gaining favor every day. The Partridge and Columbian classes were extra large and shown as a rule in splendid form and condition.

In Single and Rose Comb Reds 290 birds were shown, we believe the largest class at the fair. Here the DeGraff Poultry Farm entered 101 birds, winning on S. C. Old Pen First, Second, Third and Fourth. Young Pen First, Third and Fifth. Cock Fourth and Fifth. Cockerel First. Pullet Fifth. On R. C. Old Pen First. Young Pen Second. Cockerel First and Pullet First. Cup for Best Display and Cup for Pen.

This entire exhibit of 101 birds were a very even lot of high-grade show birds worthy of any strain. Type and sound color the feature, closely followed by head points and eyes. Among these were seen Mr. DeGraff's grand old hen that has won three first prizes in as many years at this fair, while she failed this time to land, she is still at 6 years old a choice specimen in color, with ideal shape. It takes some birds to make a display of this kind and size.

The Pure Strain Farms, Mr. F. A. Brotsch, proprietor, and Mr. Hugo Freese, manager, Scottsville, N. Y., won a signal victory by taking First and Second on S. C. Cocks, also cup for best colored male. These were two hot members, in prime condition and with every desirable quality; they also won Second and Third on Pullet. On R. C. they won Cock Third and Hen First.

Other prominent exhibitors here were C. Bailey, C. H. Arthur, J. A. Rose, Edw. VanAystyne, A. L. Jenks, William W. Hazleton and Union Poultry Yards.

The Brahmas and Cochins were good-sized classes and were well shown. Langshans were large classes, the blacks in particular.

In Leghorns Brown, Buff and White, and in Single and Rose Combs the en-

tries were large and the quality and condition very good. The Leghorns will always remain one of our most popular varieties. The attention they receive at the exhibits are proof of their hold on the fancy, and as the one increases the others do with the favor well divided. Here we found many old exhibitors and winners, among them the Elm Poultry Yards, W. R. Bowers, etc.

The display of Bantams were a feature well worth special mention. The Games were a rare collection from the best yards and the equal of the best shown at any show. They were closely followed by the ornamentals. It remained for the Golden Seabrights to break all former records. In this variety 174 birds were shown; of these 130 were shown by Proper & Co. Such classes are an exception to the rule, and make a display well worth seeing.

Ducks, Geese and Turkeys were well shown and in good classes and numbers. Pigeons numbered 710 birds and all varieties were seen to advantage.

As before stated, the exhibit was complete in every department, and when we consider that next year we can and will have a building that will afford proper space to display the show in a proper way, then we can only hope for that time to come soon, and to again enjoy the visits with our friends under those conditions.

—o—
PATERSON, N. J.

The fifth annual exhibit of the Paterson (N. J.) Poultry, Pigeon and Pet Stock Association will be held in the Auditorium, Paterson, N. J., on December 1, 2, 3 and 4, 1909. The hall is one of the largest in this part of the country, being 300 feet long, with high ceiling, and is well adapted for a poultry show. The services of the following well-known judges have been secured: Paul Kyle, M. D., J. H. Drevenstedt, Robert Seaman, W. J. Stanton.

A generous amount of silver cups and tempting prize money will be among the attractions which should appeal to exhibitors. The names of the president, secretary and treasurer of the association appear on this letterhead. The executive committee consists of C. Terwilliger, chairman; P. Hillman, P. Mial, O. H. Quentin, J. J. Brown, J. L. Bustard and M. Milligan, and with these hustlers a successful show seems to be assured.

Premium list will be ready about October 10, and any information desired can be obtained from the undersigned. J. H. Woodruff, Secretary.

Athenia, N. J.

OKLAHOMA'S BIG COMBINATION STATE POULTRY SHOW.

The Oklahoma State Poultry Association, the Oklahoma Branch of the American Poultry Association and the Big Center Poultry and Pet Stock Association, with the Enid Fair and Live Stock Association have all combined under one head to give a poultry show at the new Fine Stock Pavilion at Enid, Okla., December 11 to 18, 1909, at the same time as the big Fine Stock Show. This show is to be known as Oklahoma's Big Combination State Poultry Show. Fifteen hundred dollars will be given in prizes, and absolutely no entrance fee will be charged on any-

thing. When ever in poultry show history has such an offer been given? Such big prizes and no entrance fee!

The American Poultry Association will give their grand gold medal and a silver medal for the best cockerel of every Standard variety. Bushels of silver cups will be offered. A silver cup for everybody. All the Special Poultry Clubs offer special prizes for their own variety of birds.

To the Secretaries of Every Special Poultry Club in the United States: Do you want your club represented at this show? If so, write me. Give me your name and address and the name of your club and I will give you the name of the man who will help you get members and boost your club. Write me soon, so that you can get to work at once.

Enid, Okla. M. A. Watkins.

The third annual show of the Pana Poultry Association will be held at Pana, Ill., Tuesday to Saturday, December 14-18, 1909.

Officers of the association are as follows: President, J. Edgar Turner, Pana, Ill.; J. A. Bickerdike, Millersville, Ill.; superintendent, E. F. Karls, Tower Hill, Ill.; judge, Ben S. Myers, Crawfordsville, Ind.

The success of the two poultry shows that have been held at Pana, together with the present outlook for the coming show, insures it to be greater in every way than the previous shows.

The enthusiasm of the poultry fanciers and members of the Pana association; the hearty co-operation of the Pana business man; the push and ability of the association officers; the good will and perfect harmony of all concerned, all are factors toward making the coming exhibit of poultry at Pana a success in every way.

Pana and vicinity is rapidly becoming a leading poultry center. Many people are contracting the "Chicken Fever" in a most substantial way. Birds of quality are changing hands at a high figure. At the last poultry show fully double the business was transacted than at the previous one.

Advertisers will find it a paying investment to use space in the Catalog of the coming Pana show, which will be issued in October. Forms close October 1. More than twice as many Catalogs will be issued as were issued a year ago, yet the advertising rates remain the same.

Exhibitors and dealers will find it will pay well to put the Pana show on their list, as it is one of the associations that is rapidly coming to the front. Remember the date, December 14-18, and forms for Show Catalog close October 1. For further particulars, address the secretary, J. A. Bickerdike, Millersville, Ill.

GLEN ROCK, PA.

The Southern Pennsylvania Poultry Association is now a reality. At a special meeting of the association held in the Firemen's Hall at this place on Friday evening, August 13, the organization was perfected with an enrollment of forty-seven members.

The meeting was called to order by the president, H. W. Kramer.

The minutes of the previous meeting, held at New Freedom, on August 3, were read and approved.

The committee on constitution and by-laws reported a constitution and by-

laws which were adopted with a few amendments.

The name selected is the Southern Pennsylvania Poultry Association of Glen Rock, Pa. The officers of the association are:

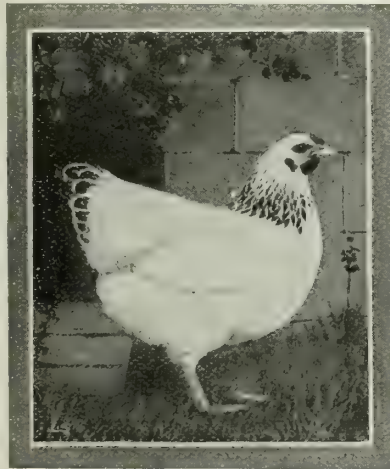

President, H. W. Kramer, Glenville, Pa.; vice-president, Dr. G. S. Stone, New Freedom, Pa.; secretary, Allen M. Seitz, Glen Rock, Pa.; assistant secretary, Dr. G. P. Yost, Glen Rock, Pa.; treasurer, H. W. Rehmayr, Shrewsbury, Pa.

Executive Committee—H. W. Kramer, H. W. Rehmayr, Allen M. Seitz, W. O. Bixler, Glen Rock, Pa.; H. E. Hildebrand, Glen Rock, Pa.; H. W. Anderson, Stewartstown, Pa.; Dr. G. S. Stone.

The admission fee was fixed at \$2, including the first year's dues. The annual dues are to be \$1.

Annual shows will be held at such times and places as may be fixed by the association. The first show under the auspices of the association will be held in Glen Rock some time in December. The exact date will be fixed at the next regular meeting of the association on the first Tuesday of September.

A cordial invitation is extended to

"CORA."

Six-months-old Columbian Wyandotte pullet. Bred and owned by Walter G. Fenton. Mt. Clemens, Mich.

all poultry and pet stock raisers to join the association.

Allen M. Seitz.

ST. ALBANS, VT.

The thirteenth annual exhibition of the Vermont State Poultry Association will be held in St. Albans, Vt., January 18, 19, 20 and 21, 1910. The officers are as follows: President, F. W. Sault, Swanton; secretary, W. B. Witters, St. Albans; assistant secretary, A. C. S. Beeman, St. Alban.

It will be a comparison show with H. B. May, of Boston, and D. P. Shove, of Fall River, Mass., as judges.

WILLIAMSPORT, PA.

The West Branch Poultry & Kennel Club, of Williamsport, Pa., will give its second annual show November 30 and December 1, 2 and 3. Judges H. P. Schwab, of Irondequoit, N. Y., and Charles T. Corman, of Carlisle, Pa., have already been engaged. The Williamsport show was the largest attended show in the East last year, over 8,000 persons paying admission to see the exhibition. Jas. T. Huston, Secretary.

Crown Bone Cutter

Cuts up scrap bones easily and quickly—no trouble. Feed your hens fresh cut green bone daily and get more eggs. Send for catalogue. **WILSON BROS., Box 600, Easton, Pa.** **Best Made Lowest in Price**

\$50 CASH and \$10 Per Month buys a \$500 25-acre vegetable farm. New 3-room cottage-like cut. Best climate, water and markets in Sunny Virginia. Other lands \$10 acre up. Send for beautiful pamphlet, maps and rates.

F. H. LABAUME, A. & L. Art., Norfolk & Westo. Ry. Dept. Y, Roanoke, Va.

X-RAY INCUBATOR

Requires less attention than any other incubator and uses about one-fourth as much oil. Saves a dollar on every hatch. Best hatcher going. Send for free catalog today telling all about it.

X-Ray Incubator Company, 1st St., Wayne, Neb.

: HEDGES' PEDIGREED :

WHITE ROCKS

Winners and layers. Trap-nested. Choice breeding hens at \$1.50, \$2 and \$3 each. Young stock for sale after Sept. 1st. Mating list free.

Miss Alice M. Hedges : Box A : Pana, Illinois

THE CHANNELL WOVEN WOOD AND WIRE FENCING :

Cheap; easily erected; safe; lasting. The ONLY fencing for stock, poultry, farm, oyster beds and general purposes. Put up in 75-foot rolls. Sold in 3 sizes—3 ft., 4 ft., 5 ft. and 6 ft. in height, 8c per lin. foot. Special prices in car load lots.

POWELL BOX COMPANY, Ltd., Eastern Distributors Mrs. and Exporters Packing Boxes, Shooks, Crates and Lumber Cortez and Gravier Sts., New Orleans, La.

Hanchett's Line-Bred

Buff Cochins

Always the BEST—BETTER this season than ever. Never such perfection in Cochins form, feathering and color as in the grand old and pullets I now have ready for shipment at reasonable prices. You do not want ordinary Buff Cochins—you DO want Hanchett's Buff Cochins. Write for handsome free booklet and state wants.

H. N. HANCHETT, Jackson, Mich.

SEND FOR CATALOGUE

INDIANA STATE FAIR, INDIANAPOLIS, IND., SEPT. 6-10, 1909.

The poultry exhibit at the Indiana State Fair this year was of the highest quality throughout and consisted of some 1,500 entries, which filled the building up to the limit. The only reason Indianapolis does not have a larger exhibit of poultry than this is because of the limited quarters. What is needed is a building fully twice as large, and we know that it could be filled with very little effort, especially when such officers as those at present are behind the deal. They are all thorough fanciers and expert poultrymen, and they know what is needed and how to treat the breeder right, and offer such premiums as will get the breeders out. The birds were all cooped in Empire coops, which presented a fine appearance, and the birds were given good care and attention. The competition in most classes was very hot indeed. Birds are now shown at the fairs in much better condition than they were a few years ago, as the breeders have learned how to moult them earlier, and therefore the competition in all the prominent classes is very keen.

U. R. Fishel, of Hope, Ind., was on hand with a fine display of Fishel's "Best in the World" White Rocks. Did he win? Of course he won—first, second cock; first, second, third hen; first, second third cockerel; first, second third pullet; first, second, third pen. This winning by Mr. Fishel is but a repetition of what he has been in the habit of doing in the past, and only adds a little more honor to Mr. Fishel and his White Rocks.

His entire exhibit was very commendable in the quality in both color and shape. The first prize pen was especially fine. Mr. Fishel said it was the best pen he had ever shown. It was certainly admired by many thousands of people who visited the poultry exhibit. Mr. Fishel reports many good sales made during the fair and says he has thousands of young birds to sell.

C. E. Spaugb, Rugby, Ind., breeder of Barred Plymouth Rocks, made a fine showing of his high class Rocks and in a hot class of birds won first, third hen; second cock; first, third cockerel; first pullet, and second pen. Mr. Spaugb's stock showed exceptional quality in both color and shape, and received much attention from the Barred Rock fanciers present. Mr. Spaugb has a fine lot of old birds for sale, birds that have been winning in the past, and says he has the finest and largest flock of young stock which he has ever been able to produce, having many birds that are full sisters and brothers to those which he showed at the fair. If you are in need of anything in Barred Rocks, you should certainly write C. E. Spaugb, Rugby, Ind.

A. D. Huffman, breeder of "Bluettes" Barred Plymouth Rocks, Wanamaker, Ind., showed a few birds of high class quality, and on three entries won second hen and second pullet. The second hen was a fine specimen. Mr. Huffman is one of our new advertisers in the American Poultry Journal, and we think he has stock of sufficient quality to merit your consideration.

In Partridge Rocks, S. A. Nofztger, North Manchester, Ind., the originator of the Partridge Rock variety, showed a nice string of his birds and, as usual, carried off the cream of the prizes. His winnings consisted of first, second cock; first, third hen; second cockerel; first, third pullet, and second pen. There was a good class of Partridge Rocks on exhibition. In fact, this breed is becoming popular very fast, and we know that while generally supposed to be one of the new varieties, Mr. Nofztger is breeding large numbers of them, which reproduce as close to Standard requirements as many of the older breeds.

Mr. Nofztger's birds were much admired by the visitors and many of his young birds are well developed and are of a high standard of quality and are sure to be heard from at the shows later this winter. Mr. Nofztger reports plenty of young stock for sale.

S. M. Ratcliffe, Kingman, Ind., exhibited a very fine lot of Buff Wyandottes, winning first, second, third cock; one, second, third hen; first, second, third cockerel; first, second, third pullet; first pen. These winnings speak for themselves as to the quality of Buff Wyandottes bred by Mr. Ratcliffe on his Orchard View Poultry Yards. We also notice that Mr. Ratcliffe's birds were among the winners at the Jamestown exposition and other leading shows. Therefore his winnings at Indianapolis should not surprise you.

J. C. Fishel & Son, Hope, Ind., were out with a string of their Quality White Wyandottes, and they won, as usual, every first in the class, including first cock; first, second hen; first, second cockerel; first pullet, and first pen. Their birds were as white as the driven snow and had the low-

down, blocky Wyandotte type which all Wyandotte breeders are after. They were one of the features of attraction in the show room, and many were the exclamations of wonder from fanciers when they gazed upon these beautiful specimens. Mr. Fishel has had some of his Wyandottes laying for the past three months and has a large flock of young birds for sale and can supply you with either show birds or breeders in any quantity.

E. E. Wilson, 921 Ashland avenue, Indianapolis, Ind., exhibited a few of his S. C. Black Minorcas, winning third cock, first hen, first cockerel, and first pen. The readers of the American Poultry Journal probably remember Mr. Wilson as one of the large winners at winter shows, and he won the Indiana state championship on S. C. Black Minorcas. Mr. Wilson is not a large breeder, but one of quality, and has a few fine specimens which he can spare.

Edgemont Poultry Farm, W. O. Chase, proprietor, Hillsboro, Ill., exhibited S. and R. C. Black Minorcas and R. C. Brown Leghorns. In the S. C. Black Minorca class they won first, second cock; second, third hen; second cockerel; first, second, third pullet, and second pen. In R. C. Black Minorcas they won first cock; first, second hen; first, second cockerel, on five entries. In R. C. Brown Leghorns they won second, third cockerel; second, third pullet, and third pen. Mr. Chase informs us he has since purchased the first pen of R. C. Brown Leghorns. Mr. Chase is a thorough fancier and a conscientious man and has good quality of stock, and we are satisfied he will treat you right should you favor him with an order in any of these varieties.

In the S. C. Buff Leghorn class, we wish to report that Hurt's Buff Leghorns won first, third cock; first, third hen; first, second cockerel; first, second pullet; first, second pen, on ten entries in a full class. Fourteen young birds, as evidence of Mr. Hurt's skill in mating, all from his famous cock "Crowned Buff," winner of first at Boston, Indiana and Missouri state shows last winter, were awarded places without defeat in a single instance. When we say Hurt's Leghorns, you know we mean the original Peter S. Hurt, Thorntown, Ind. He has plenty of stock for sale, his ad always appears in American Poultry Journal, and he reports fine results from the A. P. J.

The R. C. Rhode Island Red class contained the largest entry and was the hottest class of any in the show. Competition was here so hot that it fairly sizzled, and Judge McCord said that he was compelled to leave many a deserving bird out of the winners. Irving A. and Frank C. Sibley, South Bend, Ind., who made a wonderful record on their R. C. Reds last winter, exhibited some fine specimens in this class, winning first pen, first and third cock, and second cockerel. Messrs. Sibley's first pen was a particularly fine one, and Mr. McCord remarked that it was the finest pen he had ever seen put up by any breeder. Messrs. Sibley have plenty of quality in their young stock to please the most fastidious, and if you are considering the purchase of R. C. Reds you will do well to write them.

C. L. Buschmann, 4939 North Meridian street, Indianapolis, Ind., exhibited a fine string of R. C. Reds and won second cock; first cockerel; first, second hen; third pullet; second, third pen. It will be remembered Mr. Buschmann was one of the important winners at the Indiana state show at Indianapolis last February, and the quality shown in his young stock at this time is but the outcome of his careful mating of these fine specimens. You will find Mr. Buschmann's ad elsewhere in these columns.

E. B. Bender, Zionsville, Ind., exhibited a few birds in the R. C. Red class and won second pullet and third cockerel. These birds were very fine specimens, and Mr. Bender has a large flock of young birds to select from in filling any order you may entrust with him.

In S. C. Reds the Longfield Poultry Farm, Bluffton, Ind., won every first competed for. Their birds showed good quality throughout.

Dr. George W. Taylor, Orleans, Ind., exhibited a fine string of Houdans, winning second, third cock; second, third hen; first, second, third cockerel; first, second third pullet, and first, second, third pen. The doctor showed some remarkably fine Houdans and his young stock is well maturing and had plenty of quality to justify his winnings. The doctor's ad appears elsewhere in American Poultry Journal, and he reports plenty of stock for sale.

I. Frank Mahan, Piqua, Ohio, exhibited White Orpingtons, winning the cream of the prizes. He has Whites showing extra good color and shape.

A great deal of attention was attracted by the exhibit of the Niemann Bros. Mfg. Co., Mt. Olive, Ill. Their model portable hen house was certainly a model of simplicity and is complete in every detail, at the same time being very compact and prac-

tical. For the fancier who has a limited amount of space at his command, we recommend Mr. Niemann's poultry house to him. He also has Economy trap nests, brood coops, etc., all of his own invention and all very simple and practical. Drop him a postal and get his circular free of charge.

A meeting of the Indiana Fanciers' Association was held during the fair, to make preparations for the winter show, which will be given, as usual, the first week in February. Suffice it to say Indianapolis will again put up a quality show, as she has been doing for many years past.

The weather at Indianapolis was cool and pleasant on Monday, Tuesday and Wednesday, but Thursday it rained and made things disagreeable in general. However, the crowd was there and the management proceeded to scatter sawdust and straw to cover up the mud; and while it was disagreeable on both Thursday and Friday everybody was happy and had a good time just the same. We have many pleasant recollections of our week spent at the fair and the meeting of old friends and the making of new ones, and we trust to meet you all again there next year with more and better birds than ever before.

C. W. Zimmer.

NEBRASKA STATE FAIR.

The Nebraska State Fair poultry exhibit this year far eclipsed all that have ever been held in connection with that fair in both point of numbers and quality. There were nineteen hundred and fifty birds on display, exclusive of pigeons and pet stock. The weather was something that this fair seldom experiences. It was simply awful and cut down the attendance of breeders who had birds on display. Saturday and Sunday, the preparations days, were very good, and promise of nice weather seemed to be held out by the weather man, but Monday dawned in a drizzle and this continued off and on for three days, making mud many inches deep and keeping away the visitors.

The eastern half of Nebraska is a great poultry section of these western states and is known for the pure-bred fowls it ships to the packers and fatteners. Nearly every other farmer is an advocate of good fowls, or rather his wife is, for here, as elsewhere, the chickens are generally raised by the women folks of the household. Nebraska is full of small poultry associations, all doing good work in the cause and getting many more interested each season. Breeders from this state take great pride in their State Fair poultry exhibits and bank largely on them for a portion of their early trade.

Superintendent of Poultry Smith, the A. H. Smith of Golden Wyandotte repute, succeeded in getting out a wonderful display of birds from breeders who had never shown at the State Fair before. He has been handling the winter state show and the breeders out in that country know how he cares for birds. His assistant, Mr. Parks, also a poultry breeder, knows what sort of attention birds need when cooped for a week or ten days and he sees that they get it. Many of the breeders we had expected to see on our trip to the Nebraska fair were not present with their birds, weather probably preventing.

The American classes were in greatest evidence, with the Mediterraneans not far in the rear. Barred Rocks were a big class of over a hundred birds. White Rocks were strong and full of quality. Buffs were not numerous but good. White Doves were cut in force. Buffs also. Columbians were a good lot. Golden and Silvers, fine. Reds were a wonderful class, with a hundred and forty birds to pick the winners from. Judge Charley Rhodes said they were nice all through.

Leghorns are having another boom in this section, especially Single Comb Whites, and there was some real high class quality in the cockerels and pullets. The old birds, of course, did not show up as well, but they were good or they would not have bred such crack youngsters.

Supply men and incubator people were showing good lines of their wares. The Sure Hatch Incubator Company, of Fremont, Neb., made a nice exhibit of their machines. These were in operation and attracted much attention.

The Tiffany Company, makers of Tiffany's lice killers and roup cure, were in a booth that was well stocked with their specialties.

The Queen Incubator Company, as usual, occupied their pavilion outside but adjoining the poultry buildings. They had their machines in operation and a hundred or two chicks in their splendid brooders.

M. M. Johnson did not exhibit his Old Trusty this season, but William Holcomb

was on hand to care for the Johnson interests. They report a great season of sales and still further successes for the Old Trusty.

A. E. Wagner, maker of Wagner's Kill-emal lice killers, both powder and dust, trap nests and other appliances, was on hand with a good display.

E. E. Smith, breeder of White Wyandottes and Single Comb White Leghorns, Embden geese and Pekin ducks, was as usual a heavy winner in these classes. He always shows the boys a grand lineup of birds from his yards and carries away his share of the honors. Smith is one of the fanciers who breeds a lot of good ones.

George C. Pennington, another of the wheel-horses of the fancy in Nebraska, was among the winners in his specialty.

Mrs. Perry Strandberg, and Mr. Strandberg as well, were showing again a grand line of Barred Rocks. They have always been consistent winners at both the fairs and the winter shows.

George Fuerstein, again a winner in the Barred Rock class, captured some valuable premiums. He has been showing in Nebraska as long as we can remember.

A. H. Smith, superintendent, showed a beautiful line of Golden Wyandottes and was a winner of the lion's share.

A. M. Hadley was a visitor to the fair and tells us that he has gone into the Black Orpingtons quite heavily.

In the Columbian Wyandotte classes

a good showing of old birds, winning first and second cock and first and third hen. Mr. Ford is one of the best of fitters for birds at early fairs and shows and deserves his winnings.

OHIO STATE FAIR, COLUMBUS, O., AUG. 30-SEPT. 3, 1909.

Ohio done herself proud this year in putting up the best State Fair she ever had. Mr. A. P. Sandles instilled the necessary enthusiasm into his assistants, so that they, under his capable management, all pulled together as one man and secured an exhibit and the best of everything, not only in the poultry department but throughout the entire fair.

The weather was fine throughout all the week up until Friday, which closed the fair in a dreary, cold rain, which was much to be regretted. We were informed the attendance was much larger than ever before, 50,000 people attending on Thursday and 150,000 paid admissions throughout the week. The poultry building was filled and overflowing, and we can say that the quality in many of the classes was as hot as we ever saw at any fair grounds. In fact, it was the equal of the good winter shows.

Hiram Burkholder, Clyde, Ohio, exhibited a very fine string of Barred Rocks at the fair in a large class which showed quality throughout. He won the majority of pre-

Herbert H. Knapp, Tiro, Ohio, exhibited a fine lot of White Wyandottes, winning seven prizes on nine entries, including first and second pullet and second pen. We are told the judge hesitated some time as to whether Mr. Knapp's pen was not entitled to first place, finally giving Mr. Knapp second because one of his pullets in the pen was somewhat immature.

J. Frank Mahan, Piqua, Ohio, exhibited a few fine White Orpingtons and won two firsts and one second. These birds were nice Orpington type and good white color.

Charles McClave, New London, Ohio, the veteran poultry breeder, was there with a string of birds, ducks, turkeys, and geese. He won a lot of premiums, as he usually does—about 100 firsts, in all, and many specials, including special for the best display in the American class, which Mr. McClave says he has always won for a good many years past.

His exhibit of Buff Orpingtons was particularly fine, as was also his White Wyandottes. In Buff Orpingtons he won first hen, first pullet, second cock, first pen. He reports plenty of stock for sale in Orpingtons; also in Wyandottes, in which class he won first hen, second cock, second cockerel and first pen. He also exhibited a large string of water fowl, in which he won nearly everything competed for. Mr. McClave can supply you any variety of poultry you may desire.

The Prairie State Incubator Company had

Group of poultrymen at Ohio State Fair, Columbus Ohio, 1909.

Frank Miltenberger, Cortland, Neb., showed a fine lot of youngsters, but they were hardly old enough for fair showing. They will be better furnished for the early shows and the midwinter events. He has had a great season for the growing youngsters and it would be well to get in touch with him if you are wanting Columbians.

Mr. and Mrs. John Hensler, breeders and exhibitors of White Rocks, were on the firing line with a good showing of both old and young stock. They rear all their birds on free range, where it has shade and forage a plenty.

Charles H. Green, whom we mentioned in who's who last month, has been quietly getting together a flock of Columbian Wyandottes and he made some good ribbon winnings this year.

Charles Ross showed some excellent Reds. He is one of the Nebraskans who is using his time and influence to improve the breed.

Orville Compton is into the Black Orpingtons head over and is breeding some good ones. His show at this fair was good and he was a heavy winner.

W. R. Prewitt, Onawa, Iowa, breeder of Buff Orpingtons, showed a few of his birds and won liberally. They are the right type and were in good show shape, considering the season.

N. Dwight Ford, Ansley, Neb., was one of the Buff Wyandotte exhibitors who made

premiums won by any exhibitor in this class, and his cockerels, while they were a little small, showed that extremely narrow barring which all Barred Rock breeders are after, the quality being so pronounced that no Barred Rock fancier could pass them by without stopping to look at or handle them. Mr. Burkholder says that while his stock was late he had many more at home that were equally as promising.

In the Columbian Wyandotte class, which contained the best Columbian Wyandottes we ever saw gotten together, Tannenbaum Farms, Willoughby, Ohio, won first, second pullet, second cockerel, having only four entries in this class. This speaks well of the exceptional quality of their Columbians.

In the White Rock class, Dr. S. R. Harrison, Shelby, Ohio, won every first premium. His young birds were very large and pure white in color, and the breeders conceded that he had the quality necessary to win. The doctor also won a couple of second prizes, and he has at this time twenty-five large cockerels nearly fully matured, which he is offering for sale. His birds are white and have fine Rock type.

R. C. Caldwell, Lyndon, Ohio, also exhibited a fine string of White Rocks which showed good quality but were not exhibited in the best of condition. However Mr. Caldwell won second cock, second pullet, second hen and second pen.

a nice display. The Gem Incubator Company was also on exhibition and was hatching baby chicks, which, as usual, attracted a great amount of attention.

The Ohio branch of the American Poultry Association had a meeting and a legislative committee was appointed to ask for \$10,000 for the establishment of a department of poultry husbandry at the Ohio State University.

There were many other worthy exhibits of birds there which we should have liked to have mentioned. It is sufficient to say that the Ohio State Fair was a grand success, and we trust to be there again next year and meet all the old faces and many new ones.

C. W. Zimmer.

WEST MICHIGAN STATE FAIR.

The recent West Michigan State Fair at Grand Rapids was a big success in the point of number of entries and quality of stock shown. For the time of the year the poultry was in far better condition than could hardly be expected. The specialty breeders were out in force and many varieties, including R. I. Reds, Buff Wyandottes, Barred Rocks, White Leghorns, Silver Laced Wyandottes, Columbian Wyandottes and Game and Game Bantams, were out in force and many

individual specimens of high merit were shown.

The genial president of the West Michigan Poultry Association, Dr. E. W. Wells, Grand Rapids, is an old warhorse when it comes to breeding Reds. He was on the ground most of the time and, well, to express it mildly, his birds are dreams. Only first and second cock, first and second hen, second cockerel, first pullet and first pen came his way in S. C. Reds and two firsts in Rose Combs.

Robert J. Snyder, of Grand Rapids, had an exhibit that one seldom runs across—a complete display of Standard Game and Game Bantams, all varieties, and everything obtainable in Ornamental Bantams. This exhibit attracted widespread attention. Mr. Snyder breeds all these varieties and won the lion's share of prizes offered. Anyone

had everything pretty much his own way in Columbian Wyandottes.

James S. Wason, of Grand Rapids, showed his Chicago winning Silver Penciled Wyandottes.

Jim Tucker, popular judge and breeder, showed a long string.

The boys were all happy and showed their friends a royally good time.

MISSOURI STATE SHOW AT ST. LOUIS.

The Missouri State Poultry Show has been located in St. Louis, December 6-11. The business men of St. Louis have rented America's Greatest Coliseum for that week at a cost of \$3,000. It is a new convention

\$5 entry fee, but no one ever before heard of such a show being held in such a beautiful showroom, in such a large city, with tens of thousands of people to see their birds, with so many specials offered, and only an entrance fee of 50 cents charged. Fifty silver cups will be offered, and the business men of St. Louis will offer hundreds of dollars' worth of valuable special prizes, and \$100 in cash offered for the largest and best displays. You cannot afford to miss this show if you expect to exhibit anywhere this season.

The judges will be W. S. Russell, Charles H. Rhodes, D. T. Heimlich and Adam Thompson, four of our best and most popular judges. Others will be added. There will be six days of genuine schooling in poultry culture, six nights of pleasure and profit. You can't afford to miss the great St. Louis show under the auspices of the Missouri State Poultry Association. One-fifth prize here will mean more to you and your flock than a half dozen firsts at smaller shows. If you are in the market for show birds for later winter shows you can come here and get birds that will win in the best shows of America; if you have them for sale, buyers will be here in great numbers looking for them. Keep your eye on Missouri and St. Louis.

Write the secretary for premium list, which will be sent you as soon as issued. Make this show if you don't make another this season. Money will be paid as soon as ribbons are tied. Premiums were paid in full in one hour after the judges begun work last year.

T. E. Quisenberry, Secretary.
Columbia, Mo.

ON TO CHICAGO.

Final arrangements have been made for the great Chicago show to be held under the auspices of the Great Mid-West Poultry and Pet Stock Association. The Coliseum building has been leased, including the Annex, and every department of this great show will be under an expert superintendent, whose duty it will be to look after every detail that goes to make a strictly down-to-date exhibition.

The well-known Empire coops will be used for all classes of poultry and waterfowl. The pigeons will be caged in the coops that have been used in Chicago for the past two years, that have been voted by pigeon men as the best ever set up in America.

The premiums, both regular and special, are liberal and every dollar is guaranteed in full and in cash. This guarantee is backed by every member of the association and the money is now in the bank to pay them.

Many of the leading specialty clubs will be represented in our list, where the cash and special prizes will run from \$100 to \$200 on a single variety. Quite a few of the big specialty clubs will hold their annual meetings in Chicago, and the poultry judges selected are George Burgott, Charles Cornman, A. E. Kummer, W. C. Pierce, H. H. Coburn, O. L. McCord, Charles V. Keeler, H. A. Pickett and C. A. Morton. The pigeon judges are George Ewald, F. C. Borchardt, James Skiles, Howard Young and L. A. Jansen. Others may be added later.

At a meeting of the stockholders held at Niagara Falls, August 9, the following officers were elected: President, E. E. Richards, Cedar Rapids, Iowa; first vice president, Irving A. Sibley, South Bend, Ind.; second vice president, Ernest Kollerstrass, Kansas City, Mo.; third vice president, George H. Rudy, Mattoon, Ill.; secretary-treasurer, Theo. Hewes, Indianapolis, Ind. Executive board—C. S. Byers, Hazelrigg, Ind.; J. C. Dinsmore, Kramer, Ind.; C. C. Coulter, Frankfort, Ind.; Frank Hare, Quincy, Ill.; A. E. Martz, Arcadia, Ind. Poultry superintendent, Henry Dippel, Indianapolis, Ind. Press man and superintendent of southern exhibits, John A.

The premium list will be ready for distribution October 25. Entries in all departments positively close November 25 at 10 a. m. If you have not already sent in your name for premium list do so at once by addressing the secretary,

Theodore Hewes.

Indianapolis, Ind.

WEST VIRGINIA STATE FAIR.

One of the neatest poultry exhibits it has been our pleasure to see this season was the display held in connection with the recent West Virginia State Fair at Wheeling. It resembled more a winter event than a fall show on account of the fine condition in which the poultry was shown. There is something doing in the poultry line 365 days in the year down West Virginia way and surrounding country. If you don't think the boys down there are

SINGLE COMB WHITE LEGHORN.

First cockerel Detroit, January, 1908; 1st cockerel Grand Rapids, January, 1908; 1st cock Michigan State Fair, September, 1909; 1st cock West Michigan State Fair, September, 1909. Bred and owned by Ferris Poultry Farm, George B. Ferris, Prop., 555 N. Union St., Grand Rapids, Mich.

interested will do well to write him.

E. A. Knapp, Grand Rapids, picked the persimmons from the prize tree with a choice string of Buff Wyandottes. His birds have captured first money for several years past at Michigan's largest shows. Breeders wishing one bird, a dozen or a hundred can get them of Mr. Knapp.

Clare E. Hoffman, the prosecuting attorney of Allegan county, came up from Allegan with a grand string of Silver Laced Wyandottes, winning practically everything in sight. Mr. Hoffman has a fine poultry plant in Allegan, and by judicious and careful mating has produced a prize-winning strain almost invincible. He is able to supply any number of birds.

George B. Ferris, of the Ferris Poultry Farm, Grand Rapids, surely wore a smile. His S. C. White Leghorns won four firsts, all the first prizes he competed for.

J. G. Van Dyk, also of Grand Rapids,

hall and is the largest, best lighted, most modern and convenient showroom in any city in this country today. The show will be cooped with Spratt's patent exhibition coops, will all be on the ground floor, and no other show in America will surpass the Missouri State this year in any particular. The State Poultry Board is back of it with a \$10,000 appropriation by the state, the fanciers and business men of St. Louis are enthusiastically pushing the show, and the metropolitan press of that city agree to boost the show before and after, and make the winnings of every exhibitor worth something to him.

The premiums will be as large as those paid at any show in America. On pens, first, \$10; second, \$5; third, \$2.50. On singles, first, \$5; second, \$3; third, \$1.50. This season most shows of equal magnitude and importance will pay about half this amount in premiums and charge from \$2 to

showing some very classy stuff in the bird line, just go and see for yourself. Hospitality and courteous treatment reign supreme. The coming winter show will be a daisy.

The display of the Minnehaha Poultry Farms, McNary & Smith, proprietors, Banrock, Ohio, was simply all the way through. Their varieties—Anconas, Flack and White Orpingtons and R. C. Rhode Island Reds—were large winners of the blue ribbons. Hartman Stock Farm Poultry Yards, H. B. Hark, manager, Columbus, Ohio, came in for twenty-five first prizes on their several varieties. A gentleman that is making good is Thomas A. Clohan, proprietor of the Edgedale Poultry Plant, Wheeling. His R. C. Rhode Island Reds bespeak painstaking care and a proper system of mating. Some of the blues and reds fell his way. That man H. H. Marsh, of Wheeling, knows his business when it comes to breeding Buff Orpingtons. Type and color, both fine, make a strong combination. J. E. Graham, of Keys, Ohio, dropped in for a day on his way home from a trip through Oklahoma, and reports that 300 head of his line-bred S. C. White Leghorns are ready for the early shows.

THE GREAT BOSTON SHOW.

Plans for the great Boston show have been under way for some time, and, in spite of the fact that the show of last winter was a record breaker, everything points to even a greater one next January, and the Boston Poultry Association has again closed a lease of the big Mechanics building with its five acres of floor space, every foot of which will be utilized. Already word has been received that the National Bantam Association will hold its annual exhibition at the Boston show, and the annual meets of the Partridge Wyandotte Club, the Columbian Wyandotte Club, the Crested Breed Club, the American Polish Club and the New England Light Brahma Club will also be held here. Several other clubs are expected to vote for Boston as their annual meeting place. A new feature of the coming show and one that will interest hundreds of breeders will be the exhibits from several of the state experiment stations. A number of judges have already been engaged, but as the list is not complete the names will not be made public until later.

W. B. Atherton, Secretary.

SELLERSVILLE, PA.

The North Penn Poultry Association will hold their second annual show at Sellersville, Pa., on December 15, 16, 17 and 18, 1909. The boys are all working to make this the best show to be held in eastern Pennsylvania, and a very strong premium list of regular and specials will be out in good time before the closing dates. Fellow breeders and fanciers, do not forget to send in your name to the secretary for full information about the show and put Sellersville on your list to show your best birds, as we have a quality show and a fine territory for business, besides the officers are experienced men in handling a show, and you will receive the best of treatment and your birds will be carefully handled and cooped, and all necessary attention given to them so that they will return in the best of condition or will be forwarded to any other show as directed. F. W. Corry, judge.

H. D. Roth, Secretary.

Franconia, Pa.

AUGUSTA, GA.

The tenth annual premium list of the Augusta Poultry Association, Augusta, Ga., is now ready for distribution. We recently received a copy of this premium list, and we are pleased to say that it is the largest and most up to date that has been received by us in many months, and is evidence that the men who are behind this show are wide awake and progressive. This show takes place November 8-13, 1909, and is "The premier show of the South." Better send for a copy of this premium list to W. A. Herman, secretary, Augusta, Ga. It will interest you.

THE DAYTON FANCY FEATHER CLUB.

The first annual show of the Dayton Fancy Feather Club will be held in the new Memorial building, Dayton, Ohio, December 28, 1909, to January 1, 1910, inclusive.

The former association, the Miami Valley Poultry and Pigeon Breeders' Association, met with every success at their first show,

December, 1908. The members of the above association at their September meeting reorganized, giving it the new name, the Dayton Fancy Feather Club, and incorporated same under state laws.

This puts the new club on a permanent foundation and assures every exhibitor a square deal.

W. C. Pierce, of Indianapolis, has been secured to judge the poultry and George Ewald, of Cincinnati, to judge the pigeons.

The following officers were elected: E. M. Abbott, president; M. M. Wampler, vice president; C. K. Gardner, secretary-treasurer; Frank M. Retz, poultry secretary; W. H. Smith, pigeon secretary.

CENTERVILLE, IOWA.

The Appanoose County Poultry Association will hold its next show December 1-4, 1909. Judges W. G. Warnick, Geneseo, Ill., and Fred S. Smith, Bigelow, Mo., will place the awards.

Regular premiums are for singles, \$1 first and 50 cents second; pens, \$3 first and \$2 second on all standard varieties. We also put up sixteen silver cups, ten cash specials, and several hundred dollars' worth of merchandise specials. No matter how rare your variety, we have something nice for it, and you have a chance at all the sweepstakes.

Put our show on your circuit and do not fill the dates until you write for premium list.

Lloyd B. Mishler.

Centerville, Iowa.

LEBANON, PA.

The members of the Lebanon Pigeon, Poultry and Pet Stock Association are getting busy as the show season is approaching. Many new members have been added to the already large membership, and they are all exerting every effort to make the coming show, November 23-27, 1909, a banner one for that part of the state. Many cash specials will be offered on poultry and pigeons. The show will be held in the P. O. S. of A. Hall, plenty of light and ventilation. Birds will all be cooped single.

W. Theodore Wittman, Allentown, Pa., will place the awards on poultry, and Joe Eibel, Lancaster, Pa., will place the awards on pigeons. The Lebanon association can insure all a square deal, for these judges are well known and efficient.

Write for catalogue; the same will be ready about November 1.

Samuel Black, Secretary.

Lebanon, Pa.

APOLLO, PA.

At a meeting held Saturday, August 21, the Kiski Valley Poultry and Pet Stock Association applied for a charter and will in the future be an incorporated body. The association is buying new coops, so the show will be well cooped.

The following officers were elected: President, L. Todd Owens; vice-president, L. H. Shaner; recording secretary, Rev. P. C. Brooks; corresponding secretary, G. L. Rudolf; treasurer, John F. Forbes.

Directors—H. P. Huff, William M. Lock, S. D. Kelley, W. F. Whittingler, E. P. Shields, Judge, Charles T. Cornman.

"IT'S UP TO YOU."

Just at the present time it seems that the world is developing a lot of good men

and women who, through their wonderful ability in certain directions, have become exceedingly wealthy.

The athletic world presents us with Tyrus Cobb, of the Detroit American baseball team, and Hans Wagner, of the Pittsburgh Nationals, who have batted their way to the front ranks and a fat purse. Jack Johnson, the best fistic artist in the world, is phenomenally wealthy.

The musical world looks to Caruso and envies his \$4,000 or \$40,000 per. Mlle. Cavaliere, Talianero and half a dozen other human song birds are laying up a nice lot of nest eggs for rainy days.

The theatrical world is being entertained by Robert Mantel, William Crane, Faversham and a lot of others with no less reputation than the above and all freely receiving of this world's goods.

The scientific world is just awakening and producing two prominent persons who promise to have some good arguments over cold subjects that will bring them in a big heap of cold cash. Go it, Peary and Cook, and "the devil take the hindmost."

The mechanical, agricultural, religious, political and business world are turning out their shining stars, who in return are reaping a bountiful harvest.

But where are the stars in the poultry world? I cannot find a Cobb, Wagner, Johnson, Caruso or Mantel in the bunch. Is the poultry world asleep. Yes; it's asleep and there is only one way to wake it up. The poultry kingdom just now needs some prominent people if it is going to keep pace in the world of progress. I have the idea and "it's up to you" to carry it out.

The discovery of the north pole just now holds the world in wonderment. It's been discovered there is no doubt, and I suggest that right now the poultry world combine with the scientific world and do things.

I suggest then that some party start an expedition for the north with the purpose in view of proving to the world that at the north pole, as well as in any other part of the world discovered, Columbian Wyandottes are the best general purpose fowl in the world. That the people of the far north can just as well have fresh eggs every day and chicken during the long nights. A coop made out of ice, the nests hollowed out of cakes of the frozen stuff, would just suit Col. Wy.

I say, some poultry bug, get busy if you want to make a national reputation as well as become wealthy. "It's up to you," and when you are ready let me know and I will furnish the birds and guarantee them to do their share in making the expedition a success.

W. G. Fenton.

Mount Clemens, Mich.

THE BUFF ROCK CLUB.

The American Buff Plymouth Rock Club offers as special prizes to every poultry show in the United States and Canada that will publish in their premium list and send copy of same to the undersigned, the following notice:

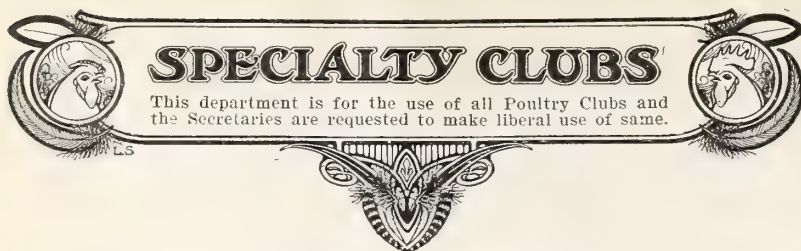

The American Buff Plymouth Rock Club offers as special prizes four handsome silk ribbons—one for best shaped male; one for best shaped female; one for best surface colored male; one for best surface colored female.

Only members whose dues are paid to July 1, 1910, are eligible to compete for these specials. Membership fee is only \$1 and this pays up to July 1, 1910. For information in regard to the club, write William A. Stoltz, secretary, R. R. No. 19, Indianapolis, Ind.

NATIONAL BLACK ORPINGTON CLUB MEET.

All show secretaries interested in securing the National Black Orpington Club meet should at once communicate with the secretary.

There will be some special cups offered, including the president's \$50 cup for the most points scored at the National meet by any club member at the meet; the secretary-treasurer's cup; the president and secretary-treasurer medals for merit, and other valuable prizes will be offered for the show offering the most inducements. Only club members can compete for these prizes.

Decision as to location will be made as soon as show secretaries have offered their propositions. All communications should be addressed to Milton W. Brown, Sta. L., Cincinnati, Ohio.
 Milton W. Brown,
 Sec'y Nat'l Black Orpington Club.

IMPORTANT NOTICE TO ALL BUFF WYANDOTTE BREEDERS.

Madison Square Garden being the one great show in this country, all Buff Wyandotte breeders should see that this breed is well represented there, and the undersigned have been appointed a committee to see that there is a good big display of Buff Wyandottes at New York next winter, and we ask every one interested in this breed to help us out with specials and entries. Your specials will be placed as you wish,

and if you can give but a small amount it will be thankfully received and placed where it will do most good. The New York Poultry and Pigeon Association will add one-fifth to whatever cash we raise for specials. Let us know what you will do. If any further information is desired, apply to the undersigned.

C. F. Smithers, Heuvelton, N. Y.
 J. E. Willmarth, Amityville, N. Y.
 Committee.

AMERICAN WHITE WYANDOTTE CLUB.

The American White Wyandotte Club numbers among its members some of the most noted and leading breeders of White Wyandottes in this country. Its membership is not as large as some other specialty clubs, but what it lacks in numbers is made up by the enthusiasm and character of its members. At the annual meeting held at Madison Square Garden, New York, January, 1909, the following officers were elected: President, Horace Havemeyer, Stamford, Conn.; vice-president, E. W. Corey, Ossining, N. Y.; secretary and treasurer, George W. Dakin, Roxbury Crossing P. O., Mass. Executive committee: W. B. Owen, Vineyard Haven, Mass.; Arthur G. Duston, South Framingham, Mass.; C. F. Titus, Malden, Mass. The club offers each year, where the annual meeting is held, valuable cash prizes and ribbons to club members. The next annual meeting of the club will be held at Boston and valuable prizes will be offered. The membership fee is \$5, which includes the first year's dues. The

annual dues thereafter are \$2, payable October 1.

The secretary will be pleased to send an application blank or other information concerning the club to any one desiring same.

George W. Dakin.

44 Evergreen St., Roxbury, Mass.

THE NATIONAL BLACK LEGHORN CLUB

has issued a fine 30-page catalogue which will be sent to all who request it. We would like to correspond with show secretaries to arrange for our club specials at the coming shows.
 M. S. Barker,
 Thorntown, Ind. Secretary.

NEWLY-ELECTED OFFICERS OF NATIONAL WHITE WYANDOTTE CLUB.

President, Charles D. Cleveland, West Orange, N. J.; vice-president, John Martin, Port Dover, Canada; secretary-treasurer, F. S. Hawin, Youngstown, Ohio.

Executive Committee—Maurice F. Delano, Vineyard Haven, Mass.; J. C. Fishel, Hope, Ind.; J. H. Wolsieffer, Dunellen, N. J.; George H. Rudy, Matoon, Ill.; W. P. Smalley, Shawnee, Okla.

BUFFALO MEANS BUSINESS.

The executive board of the New York state branch of the American Poultry Association met September 15 at Syracuse during the State Fair. A Buffalo delegation put in a bid for the next meeting of the branch to be held in conjunction with the international show at Buffalo, January 25-29, 1910, and they got it. All the A. P. A. members present, including the executive board, pinned on "Buffalo Next" buttons, and we can look for a rousing meeting of the state organization during show week.

Having landed the state meeting, the enthusiastic poultry organizations of Buffalo, backed by the Chamber of Commerce, are hot after the A. P. A. meeting for August, 1910. They give several reasons why Buffalo should have this convention. It is the birthplace of the American Poultry Association; centrally located for the majority of A. P. A. members; reduced rates on all lines; good accommodations very cheap; coolest city in the United States in August; surrounded by pleasure resorts and famous poultry plants, and a good field for new members, as Buffalo has more poultrymen to the square inch than any other city.

The poultry organizations of the "Queen City of the Lakes" are anxious to unite in entertaining the A. P. A. members in Buffalo in 1910.

The Chamber of Commerce extended an invitation to the A. P. A. when in session at Niagara Falls in August last, offering a free hall and the keys of our city if they would hold the next convention in Buffalo.

Which does the A. P. A. want? Increased membership with small attendance at conventions or an increased attendance with enthusiastic meetings, which of itself will eventually draw all true fanciers into it.

During "Chicken Week" in Buffalo the New York state branch, one of the thrifty daughters of the A. P. A., will make a thorough canvass for new members at the show.

This "International Show," as arranged for that date at Buffalo, is taking on proportions never before dreamed of.

George H. Burgott, Lawtons, N. Y., is poultry superintendent; Howard J. Young, of Buffalo, pigeon superintendent; Mrs. A. Butterfield, Niagara Falls, N. Y., canary superintendent; J. Thomas Harp, Buffalo, set stock superintendent.

The list of judges selected at this date are Butterfield, McNeil, Winshall, McKenzie, Wagner, Schwab, Webb, Drevenstedt, A. C. Smith.

The international idea will be carried out in every way. Address all communications to "International Show," 309-11 Brisbane Bldg., Buffalo, N. Y.

SECRETARIES OF POULTRY ASSOCIATIONS TAKE NOTICE.

As secretary of the American Black Minorca Club and of the International Rose Comb Black Minorca Club, I am authorized by both clubs to offer ribbons respectively for Single and Rose Comb Black Minorca exhibits in the leading shows of the United States and Canada; therefore I take this way to say to the secretaries of poultry shows: If you will print the following offers in your premium lists and send me a copy of the premium list as soon as printed, I will send you attractive card certificates to hang on the coops of winning Minorcas. These cards are to be returned to me by the show secretary at the close of the show, filled out with the name and address of the successful exhibitor and signed by the show secretary. I will send ribbons in exchange for the cards to the successful exhibitors who are members of the club and will keep the cards on file as records for future reference.

Offer of Ribbons.

The International Rose Comb Black Minorca Club offers special ribbons each for first prize Rose Comb Black Minorca cock, hen, cockerel, pullet and pen, to be competed for by members of the club and applicants for membership who send \$2 fees for initiation and first year, before the judging commences. The number of ribbons won will be credited to each winner in the club catalogue, and championship will be awarded to the winner of the largest number of club ribbons in each state.

George H. Northup, Sec'y-Treas.
Middle Granville, N. Y.

The American Black Minorca Club offers special ribbons each for first prize Single Comb Black Minorca cock, hen, cockerel, pullet and pen. Competition is open to members of the club and to breeders of Single Comb Black Minorcas who apply

with \$2, for membership before the show opens. The number of ribbons won will be credited to each winner in the club catalogue and championship will be awarded to each winner of the largest number of ribbons in each state.

George H. Northup, Sec'y-Treas.
Middle Granville, N. Y.

R. I. RED CLUB OF AMERICA.

The Ohio state branch of the Rhode Island Red Club of America will hold its annual meeting with the Mahoning Poultry Association at Youngstown, Ohio, January 10-15, 1910, inclusive. Mr. Lester Tompkins, of Concord, Mass., has been secured to judge Rhode Island Reds. Much credit is due the Youngstown people in being able to secure Mr. Tompkins, whose record as a judge and exhibitor at New York and Boston is too well known to need any further mention. The Mahoning association offers \$50 in cash and \$75 in cups to be placed on Reds. The show will be cooped by the Empire Cooping Company, and each bird will have a single coop only one tier high. Comparison show with the Reds having the call for position are some of the inducements offered breeders. The Mahoning Poultry Association has a large membership of active members and also has secured the A. P. A. state meeting. Youngstown is in the heart of a large manufacturing district and is easily reached by seven different railroads.

The two state cups and medals offered by the Rhode Island Red Club of America will be placed here, also numerous other specials.

The Red breeders of the middle states should not miss this chance to show under these conditions. They should encourage it by joining the Ohio branch of the Red Club and help boost the Reds. The membership fee is \$1 and is now payable for 1910 and should be sent to J. W. Simmons, Geneva, Ohio, who will gladly give any other information desired.

J. W. Simmons, Sec'y-Treas.

NOTICE TO ANCONA BREEDERS.

Now, since the Ancona Club of America has the new standard for Anconas, we desire to get in touch with every breeder in the United States and Canada and ask that lovers of this handsome breed and egg machines join our club and help us push it to the front.

As a special inducement for breeders to join the club at this time we will give a fully paid up membership to November 1, 1910, for 50 cents. This offer is only good until November 1, 1909.

From all sources breeders are showing their good will and interest in the club affairs. Your interest is ours; if you are not a member we want you to join; we want your influence, and it will help you to join in with us; it will give you a standing as a breeder.

A good member in every community makes a claim on our help and a pull for our club prizes, and every prize you win adds a value to your flock.

Our membership has more than doubled since July 1. We are not satisfied yet; we want all the breeders to join our ranks.

Write at once for an application blank, or send in your application for membership. I will issue you a membership certificate. Do this at once, so that your name may appear in the list of members which will be published in our new catalogue.

George Johnston, Toledo, Ohio, Sec'y-Treas.

377 S. Detroit Ave.

AMERICAN BUFF WYANDOTTE CLUB.

The secretary requests all the members of the club to do something to help. Get a new member, give a bit for specials, write an article for the poultry papers, contribute to the catalogue, etc. If we would all do just a little it would amount to a great deal, owing to the number of us. Please be prompt with your contributions to the catalogue so we can get it out earlier. It costs the club quite a bit of money to print and mail all this to the membership list, so if you are all willing and prompt it will prevent us having to print and mail another circular. Our postage bill is very large; much of it could be saved if the members would be prompt. Send in your dues early so we can publish a correct list of members in the catalogue. Those who are not paid by December 1 will not be considered as members.

It requires united effort on the part of all the members to make the club a success, and we hope to have your hearty co-operation

in all of the above things in order that we make the club successful. Please let me hear from every member. Yours for success, Henry K. Ingalls, Secretary.

Greenville, N. Y.

HOW HE SELECTS HIS CREAM SEPARATOR.

The ordinary farmer has no expert knowledge of cream separators, but knows in a general way that they are progressive and beneficial from the fact that their use is growing continuously, especially among the up-to-date dairymen over the country.

He naturally sees a great many advertisements. When anything is a success and profitable there are sure to be imitators and others who are seeking in some way or another to secure a portion of the profits. They are not stopping to consider whether they have the best machines, whether they can do what the best machines can do, but determine to secure profits, if not one way, then another.

They hold out false inducements, alluring prices, and claim for the machines things that they cannot fulfill; but the ordinary farmer does not know the truth or falsities of these claims, and how he is to discriminate surrounded by these conditions. This is the situation of a great many men who would like to buy a separator, but are not well posted on the machines, and therefore not able to decide from the advertisements and the talk of the sellers; in other words, not qualified to judge between the claims of the different machines.

The sensible view taken by a hard-headed, intelligent German farmer strikes us as being a pretty good plan for the ordinary farmer to follow.

He says: "I did not know anything about the merits of the machines from an investigation of them myself, because I am not an expert, neither am I an expert in medicine, and I therefore consult a doctor when anything is the matter that I do not understand in regard to myself or family. I therefore looked around and observed that the experiment stations, the agricultural colleges, the majority of the winners in the butter contests and a large proportion of the up-to-date scientific farmers were using the De Laval separator. Now this was as good an endorsement as I could hope for, acting just as these wise men who are experts in their lines and in the dairy business, whose experience and knowledge and wisdom enabled them to select the De Laval. This was all the evidence that I wanted of the value of this well tried and highly appreciated machine, and I bought the De Laval, and I am glad that I did so."

This certainly is a very sensible view, and it is always likely to lead one to the right conclusion. You take the experience of the competent and capable man, who is making a success of his business, and the result is you are benefiting yourself by using the other man's experience and without his cost.

We can say to the farmer who is at a loss to determine what machine to buy to take advantage of this sound, sensible, thrifty German and follow his plan, and you will land in the right spot.—From American Swineherd.

POULTRY QUEEN FOUNTAIN—FIRELESS AND NON-FREEZING.

A new invention and one that cannot help but appeal strongly to the poultry fraternity in general is the fireless drinking fountain manufactured by the Bryan Manufacturing Company, of Cadiz, Ohio. It is positively guaranteed to keep water warm in winter without fire; therefore will not freeze even in weather below zero. This boon to poultrymen, just as soon as its merits get generally known, will, without question, enjoy a phenomenal sale. Mr. H. E. Bryan in person demonstrated his invention at the recent West Virginia State Fair, and the most favorable comments were heard on all sides. There being no lamp, no burning of buildings can result from its use. Write the Bryan Manufacturing Company, Cadiz, Ohio, for their free circular.

WATERPROOF ROOFING.

Most people think that a material which is called a roofing is of course waterproof. As a matter of fact ordinary ready roofings are only waterproof for a little while, and do not really become roofs at all until they are painted. Most ready roofings when new have a coat of paint which has been applied at the factory, and when the paint wears out it must be promptly renewed or

the manufacturer's guarantee will not hold. An up-to-date roofing like Amatite, has a surface of pitch and mineral matter which is absolutely proof against water. The pitch in Amatite Roofing is in two good thick layers. On account of the oily nature of pitch, water has no effect upon it, and accordingly Amatite Roofing needs no paint whatever and can be left out in rain and snow and sun year after year without any attention or care.

Despite this peculiar surface, Amatite is just as easy to lay as any other roofing and does not cost any more.

A sample of Amatite can be obtained free, on request to nearest office of the Barrett Mfg. Co., New York, Chicago, Philadelphia, Boston, St. Louis, Cleveland, Pittsburgh, Cincinnati, Kansas City, Minneapolis, New Orleans.

FREE SAMPLE OF CONGO.

Careful buyers instead of making their decision in the hardware store while the dealer is taking, prefer to get samples and study the matter over quietly and thoroughly at home. In the case of roofings this is easily done. The United Roofing & Manufacturing Company, who make Congo roofing, are willing to forward samples of all grades of their roofing, together with booklet telling about their famous guarantee bond, free of charge, to anyone interested. The receiver is under no obligation to buy.

The manufacturers of Congo roofing believe that their material stands investigation pretty well, and are satisfied to let it talk for itself.

If you are in the market for roofing, you need not hesitate to ask the company to send you a free sample. Address the United Roofing & Manufacturing Company, Philadelphia, Chicago or San Francisco.

THE FERRIS POULTRY FARM.

The Ferris Poultry Farm, George B. Ferris, proprietor, Grand Rapids, Mich., originators and breeders of the Ferris strain of S. C. White Leghorns, has this slogan which is lived up to in every particular, "A strain of S. C. White Leghorns combining in the highest possible degree the requirements of the fancier, to whom standard qualities are of utmost importance, with the requirements of the practical poultryman, who must consider utility above all else." This large plant has been built up on strictly business principles and now into every nook and corner of the country do the Ferris Leghorns go. Their prize winning record at numerous shows last winter was something to be proud of. They have started to repeat the same this year. At the recent Indiana State Fair, in a hot class, their birds won three prizes, including first cockerel. At the West Michigan State Fair, Grand Rapids, just held, they won four firsts, all the firsts competed for. They are prepared to furnish one thousand early hatched youngsters for the early winter shows. For the next sixty days many special bargains are being offered. A beautiful catalogue tells the story. Send for it to the Ferris Poultry Farm, 555 North Union street, Grand Rapids, Mich.

A POULTRYMAN'S NECESSITY.

According to men who know—poultry keepers who are practical and successful—there is nothing of greater value in the feed room than a good, easy working, always ready bone cutter.

Cut green bone, freshly cut, of course, is as much part of the regular ration as corn. Consequently the necessity of the machine.

Many may claim to be good, but there is quite a difference in construction and ease of operation, and this is most apparent when one is familiar with the Crown Bone Cutter, made by Wilson Bros., Box 600, Easton, Pa.

This handy machine works quickly and simple, turning out the bone shavings in just the shape for quick digestion by the fowls.

One of their catalogs, sent on request, will explain the principle and give you valuable information on egg laying. Write for it.

A VISIT TO ROSEMARY FARM.

The writer has had many enjoyable visits to the yards of friends and fellow poultrymen, but none, we are pleased to say, that were enjoyed more than one recently made to Rosemary Poultry Farm, presided over by our genial friend and fellow fancier, Harry Riggins. Harry is one of those fel-

lows we often read about but seldom meet, who makes you know you are welcome and makes your embarrassment drop away "like lice from a dead chicken." If anything more was needed to make our entertainment complete it was supplied in the splendid dinner served by our hostess, Mrs. Riggins. After we had feasted and talked "chicken" until our supply (of talk) was about exhausted we were escorted to the poultry yards to see the Barred Rocks, and a pleasing sight it was. Rocks everywhere, beautifully barred, strong, healthy cockerels and pullets, only waiting an opportunity to represent the farm and to add dignity and honor to the breed. We also had the pleasure of handling Mr. Riggins' favorite hen, Rosemary Queen, which he is grooming for the Illinois State Fair, and we predict she will make some one "go some," if she does not add more honors to her already enviable record. We never grow tired of admiring good quality, but much as we enjoyed the company of our host and hostess and admired the quality of their birds, the "time that waits for no man" finally drew near and we were forced to leave, but we hope to see you again, Harry. J. C. J.

A PHENOMENAL WINNING MADE BY JOHN O. WILLARD, LINDEN, MICH., ON HIS BUFF ORPINGTONS AT MICHIGAN STATE FAIR, DETROIT, MICH.

Mr. Willard reports a phenomenal winning on his Buff Orpingtons at Detroit, where he won every prize competed for, which was first, second and third in every class except pen; here he got first and second. Mr. Willard's flock of Buffs comprises birds that have won at all the prominent shows in this country and Canada and he also has birds imported from England. Therefore it was to be expected with such birds for breeders he would produce fine stock. He had cockerels weighing eight pounds and pullets laying Sept. 1. So it is plain to see they have size and the type and color necessary to win. They have 1,000 head of fine young birds and are prepared to fill your order for early show birds as well as breeders in any number. Write them for prices and mention American Poultry Journal. See their ad. in this issue.

THE POULTRY DUST BATH COMPANY, WHITING, IND.

appear in this issue with an ad of their poultry dust bath; that is a new and unique product. Their Dustyne gives you absolute freedom from lice on your fowls and mites in your coops, combining as it does in a dust bath all the materials necessary for the elimination of vermin and also being an absorbent and disinfectant.

Furthermore, its simplicity will appeal to every one, for you simply "let the chickens do the work" of freeing themselves of lice by dusting in Dustyne. They guarantee Dustyne to do all they claim for it, and offer it to you at a nominal price. We know the men who comprise the Dust Bath Company and know them to be thoroughly reliable and responsible for any promises they make, and as they guarantee their dust bath to free your chickens and coops of lice and mites, you should not hesitate to place an order with them.

Look up their ad elsewhere in this issue. Their address is Poultry Dust Bath Company, Whiting, Ind. Mention the American Poultry Journal.

SOME IMPORTANT THINGS TO KNOW.

Do you want the best egg ration? Do you want recipes for making louse killers, formulae for chick feeds, formulae for making your own disinfectants, in fact, any recipe to use in the poultry business?

Do you want to build a house, trap nests, feed hoppers—or any thing for a poultry plant?

Do you want to know how to tell the laying hen, test eggs for hatching before setting—or any other advertised scheme? Do you want to know how to wash birds, how to bleach them, how to train them for the show, how to detect methods of faking—or anything else about fitting poultry for the shows?

You get hundreds of suggestions gathered by poultrymen during years in the new book, "Tricks of the Poultry Trade."

This book and one year's subscription to American Poultry Journal for only

75 cents. Send all orders to American Poultry Journal, 358 Dearborn street, Chicago, Ill.

A. J. Laundon, Elyria, Ohio, is a breeder of White, Buff and Barred Rocks and Single Comb Reds. At the show held at Lorain, O., last winter he won an elegant silver cup on his White Rocks, and in other shows he won many regular and special premiums, always getting his share of the regular prizes. He now has young birds, well matured, with quality that will justify your placing an order with him to show at the fall fairs. Every sale made by Mr. Laundon is fully guaranteed to be exactly as represented, or birds may be returned and your money cheerfully refunded. Mr. Laundon has been engaged in business in Elyria for a number of years and is thoroughly reliable. Therefore you need not hesitate to place an order with him. He has an especially fine lot of White Rocks, which have been raised in a large orchard, having a range of five acres, with plenty of shade. If you are in need of stock you should look up his ad, which appears elsewhere in this issue.

North Manchester, Ind., June 1, 1909. To whom it may concern: This is to certify that I have sold my Rose Comb Black Minorca cock bird Delmas to Mr. R. C. Stewart, of Big Rapids, Mich. As a cock bird Delmas was exhibited by me at the Jamestown Exposition, where he was awarded first prize in strong competition. I consider Delmas to be the best cock bird which I have produced prior to this season.

For the past two seasons Delmas has headed pens from which I sold eggs at \$25 per setting and as a sire has proved himself to be a great producer of high average quality, there being scarcely any poor specimens among his offspring. He is sire of 2d pullet and 4th cockerel at the Jamestown Exposition, 3d cockerel at Chicago, December, 1908, and a large number of pullets and cockerels which have won in the hands of my customers.

Mr. Stewart has excellent females with which to mate Delmas. In dealings I have found him straightforward and honest, and I recommend buyers to him, for I feel that they will get their money's worth. Respectfully submitted,

LLOYD C. MISHLER.

Mr. Edward Davidson, proprietor of the Lick Run Poultry Yards, Carey, Ohio, starts an ad in this issue. He is a pioneer breeder of exhibition Rouen ducks and Toulouse geese. He is also exceptionally strong in Buff Rocks of the soft, even buff kind. Some of the largest duck and geese breeders in the country come to him for new blood. His stock is beautifully marked and almost mammoth in size. His flocks have running water the entire year and thus strong and vigorous stock is assured. No matter how high the quality of birds wanted, he can furnish them at moderate prices.

**A VISIT TO WALTER G. FENTON'S
YARDS, MT. CLEMENS, MICH.,
COLUMBIAN WYANDOTTE
SPECIALIST.**

Returning from the A. P. A. meeting at Niagara Falls last month the writer made a flying trip to Mt. Clemens from Detroit. Mr. Fenton's poultry yards are about a mile from the town and ideally situated for the raising of thoroughbred poultry. The farm consists of about ten acres, of which an orchard takes up half. Here is where the young stock is raised in colony coops of Mr. Fenton's own design.

Mr. Fenton had his own idea when he built these coops and for a combination of brood coops and colony houses they beat everything I have ever seen to date. They will raise chickens from a week old to maturity without changing them about from one house to another as the chick is growing, as is customary at other places, and the easy manner in which these houses can be kept clean is noteworthy.

Talk about your clean poultry houses, here is where you can find them. Everything in its place and as neat as a pin. Labor saving devices all over. One thing that struck me was the way Mr. Fenton waters his stock. I'll bet his chickens would not drink out of a tomato can. Here is the reason: His drinking fountains are of the kind that can be thoroughly cleaned and the man that waters the stock carries a supply of towels with him. Every fountain is thoroughly cleaned and dried before fresh water is put in it and disease

"ENCORA."

Six-months-old Columbian Wyandotte pullet. Sister of Cora. Bred and owned by Walter G. Fenton, Mt. Clemens, Mich.

has never visited his flocks. It is no wonder then that his chickens are in such fine condition as we find them.

He had close to a thousand of as fine Columbian Wyandottes as grow in this country, every one as bright as a dollar, free from brass, and with exquisite markings in hackles and saddles. In one pen he had about 75 young cockerels and over in the other a lot of pullets, every one of them will make somebody step lively at the coming show this fall and winter. Mr. Fenton is a hard worker and is bound to succeed. He breeds close to type and standard requirements and would not tolerate a poor bird on the place. In Mrs. Fenton he has an able co-worker who is as enthusiastic a fancier as you will seldom see, and it is she who gets after the help to keep things neat and clean about the place.

Louis A. Stahmer.

WISCONSIN'S BIG SHOW.

Wisconsin's big poultry show will be held at LaCrosse, December 21 to 28, 1909, and the premium list will be ready for distribution November 1. This will be the banner show of the Northwest. The LaCrosse show is the oldest in the state, and pays the largest premiums. The association invites all fanciers and breeders to send their birds to this exhibition. Judge P. H. Shellabarger will place the awards. For entry blanks and premium lists, or further information, write
Jos. H. Poehling, Secretary.
1517 Farewell St., LaCrosse, Wis.

WOMELSDORF, PA.

The Womelsdorf Poultry, Pigeon and Pet Stock Association will hold its first exhibition in the Town Hall at Womelsdorf, Pa.,

December 1 to 4, 1909. Liberal premiums, numerous specials and silver cups will be given away. Louis P. Graham, of New York city, will judge the show. Premium list ready November 1. Entries close November 25.
Charles D. Leinbach, Secretary.
Ryeland, Pa.

CONGO

NEVER LEAK ROOFING

WE OFFER to the consumer the best Ready

Roofing proposition on the market to-day. We don't make Congo just to sell to a floating kind of trade and then forget about you.

We make Congo to wear—to give satisfactory service.

We not only want your trade, but your good will.

We want every buyer of Congo to be a satisfied customer. That's our best advertisement.

To this end we have made Congo just as good as a ready roofing can be made. We have tested it in every possible way, and by long continued service. We are so satis-

fied that Congo is the longest wearing ready roofing on the market that we have made arrangements with the National Surety Company to issue a Guarantee Bond with every roll of Congo.

These bonds cost us money, but they add not a cent to the cost of Congo to you.

Before the National Surety Company would assume this responsibility, they convinced themselves beyond a reasonable doubt that Congo would do all we claimed for it. And there isn't another Ready Roofing on the market to-day that carries a like guarantee.

Don't you think that a roofing in which the manufacturers show such confidence is worth investigating?

Send us your name and address and we will mail you a Congo sample free with our booklet telling all about it.

RIVER HOME POULTRY YARDS, PERRYSBURG, OHIO, AS SEEN BY C. W. ZIMMER ON HIS RECENT VISIT IN THE INTERESTS OF THE AMERICAN POULTRY JOURNAL.

We found the River Home Poultry Yards beautifully located on the banks of the Maumee river a few miles out from the great city of Toledo. The Maumee Valley electric car, which passes the plant, stops directly in front of the yards. We were cordially greeted by Mr. F. J. Stamm, the manager, who took considerable pride in showing us around, that we might see the many good points to be found in the birds of his breeding this year. Mr. Tracy, owner of River Home Poultry Yards, has an elegant suburban home, fully equipped with all modern conveniences. A spacious lawn with beautiful flowers of all colors first greeted our eyes. The yards and buildings are all of the very best materials that money can buy and are well painted and kept in the best of repair. Everything is as neat and clean as it is possible to be. Sanitary conditions prevail everywhere throughout the plant, nothing but strong, healthy, vigorous stock is used for breeders. These qualities are therefore transmitted to the young stock, and we failed to find a sick chicken on the plant.

Nothing but the very best quality of Light Brahmas and Barred Rocks are bred here. We saw plenty of quality on every hand, as was to be expected from the winnings made by them last year, which consisted of the following:

At the Chicago show on eleven Light Brahmas they won twelve prizes in a strong class; first and second hen; fourth and fifth cockerel; second, fourth and fifth pullet; first pen, and first on display. At the Detroit show, 1909, on eight entries in Light Brahmas won first, second and third cock; first, third, fourth and fifth hen; first pullet and first pen, being nine prizes; also won second Barred Rock cock.

At the great Boston show, 1909, on two entries they won fourth cock. These birds were shipped 700 miles and were untended.

At the last Toledo show, on Light Brahmas they won first, second, third, fourth and fifth cock; first, second, third, fourth and fifth hen; first, second, third, fourth and fifth pullet; first, second, third, fourth and fifth cockerel, and first pen. And on Barred Rocks, third and fourth cock and fourth cockerel. A. P. A. diploma on Light Brahma cockerel.

At the Indianapolis show, February, 1909, they won on Light Brahmas, first, third and fifth cock; first, second and fourth hen; third cockerel; fourth and fifth pullet.

At the Detroit show, in competition, Charles McClave, judge, gave one of their Light Brahma females the remarkable score of 96½ points, which we believe to be the highest score ever given a Light Brahma in competition. The reader can readily see that with this grand array of prizes to their credit, the stock reared on River Home Poultry Yards has the quality necessary to win in the largest shows and in the hottest competition to be found anywhere in the country.

The young stock found on the plant is large and showed that the wonderful quality of the old stock was being reproduced. Many fine specimens showing the black markings close up to Standard requirements, with good clear white sections free from yellow or cream. The flock of Barred Rocks had many specimens that had the ringy appearance so much desired.

We predict that this season will again find many of the blue ribbons being carried away by River Home Poultry Yards. Every detail of the business receives the utmost care and consideration at the hands of Mr. Stamm. Male birds are separated as soon as the breeding season is over and kept in separate pens, each bird having a house and yard to himself, and no fighting is permitted. All the yards are provided with a watering device, and the opening of one valve supplies a string of yards with fresh water instantaneously.

Automatic feeders are now used throughout the plant, and it was a grand sight, about suppertime, to look down the yards and see the vast army of young birds, amounting in all to about 1,500, busy feeding themselves.

The main building contains the office, the heating plant, incubator cellar and brooder house, and is 30x125 feet, being equipped with electric light, running water, etc. The breeding house is 30x150, contains fifteen breeding pens, also has electric light and running water, the yards being 10x150 feet in length. Green food, consisting of rape,

oats, etc., is planted and kept growing in these yards.

Sixty-seven colony houses in separate yards, varying from 20x150 to 40x200, complete the plant. All is provided with an abundance of shade, and, as we said before, everything is the pink of perfection and neatness. The ride to the plant from Toledo consumes but thirty minutes of time and lies along the Maumee river, the scenery being picturesque and enjoyable. Visitors are heartily welcomed on all days but Sunday, and they will enjoy looking at the many ribbons and gorgeous silver cups adorning the office walls, and testimonials of the quality of River Home Poultry Yards stock. Their advertisement is always to be found in the pages of the American Poultry Journal.

RIDGE VIEW FARM.

**Rose Comb Rhode Island Reds, Single
Comb White Orpingtons, A. G. Clark,
Owner—Cleveland Office 405
Williamson Building—Farm
at Willoughby, Ohio.**

Reported by C. W. Zimmer, Representative of American Poultry Journal.

We found Ridge View Farm, located two and one-half miles south of Willoughby, which is near Cleveland, Ohio, on Willoughby Ridge, one of the highest points in this section. Willoughby is reached by two railroads, the Nickel Plate and Lake Shore, and also has the electric, which is only one mile distant from the farm. They have both the Bell and Cuyahoga telephone service, and all orders receive prompt attention and are quickly handled by means of the electric line to Cleveland, where all express lines are to be had.

The plant consists of fifty-five acres of slightly rolling land, being underlaid with gravel soil, insuring perfect drainage and pure ground. In fact, ten minutes after the heaviest rain yards and fields are entirely free from water. This makes a wonderfully healthy location for the raising and development of poultry, and stamina is evident all through the flock.

They have a house capacity for 500 head of breeding stock. The incubator cellar, with thirteen machines holding 2,800 eggs, and the brooder house is 30x60 feet, with a capacity of 1,200 chicks. Besides this, they have out-door brooder capacity for 1,000 more, and colony coops having a capacity of at least 2,000 head, besides many other colony houses and yards throughout the orchard. There is also an office building, shipping room, feed room, conditioning room and tool house for making coops, etc. Therefore, you will readily see that the Ridge View Farm has ample equipment and is now, in fact, one of the large poultry plants of the middle West.

The Ridge View Farm strain is known as "Practical Reds" and show the highest advancement in this breed of fowl, particularly from a utility and practical standpoint.

Their long barreled bodies show great egg capacity and their heavy, rugged frames denote stability and strength. All young stock have free, unlimited range through fields and woods, bringing about the highest development possible. While they do not use the open front house, Mr. Clark advises us that windows are open winter and summer, giving practically the same conditions as the regularly constructed open front house. While the buildings are not elaborate, they are extremely practical.

Mr. Clark has been breeding for the last ten years with his main object in view of establishing a strain of "Practical Reds," particularly adapted to breeding of a large egg-producing strain and a strong, well-developed market fowl, and the long bodies and long, straight back are prominent throughout his flock. While he has been particularly breeding for the utility side of the Red, he has not forgotten the correct Red color. This is proven by the fact of his record in the shows during the past year.

We were shown seven handsome large silver cups, mute testimonials of the high quality of the Ridge View Farm stock.

At Willoughby, Ohio, January, 1909, in a class of 135 Reds, Ridge View Farm won first cock, first, second, fourth, fifth cockerels; first, second, third, fifth hen; first, second, fourth pullet; first, second, third on pens. Also won color and shape specials, special silver cup for best Rhode Island Red in show, either Single or Rose Comb, cup for best display, cup for best pen.

At the Kansas City Show, 1909, a show as large and important as Chicago, Ridge

View Farm won first pen, first hen, first and second pullet, third cock, third and fifth cockerel. The first prize pen was said to be the best pen of Rose Comb Rhode Island Reds ever shown at Kansas City. They also won shape and color specials. At the big Cleveland Show, in a class of 200 Reds, they won first pen, first cock, first hen, second pullet, third hen, fourth cockerel, color and shape special. Also display cup Rhode Island Red Club of America, and Cleveland Fanciers' Club cup for best display. The above prizes on eight entries.

The birds shown by Mr. Clark at Cleveland were inspected by us at that time, and they showed wonderful uniformity of type and a rich, even red all over, with a clean red undercolor so much desired. While all these birds were very much alike, one female in particular, that illustrated by Mr. Schilling, was a wonderful pullet, being very near perfection in all points.

We found the flock of young stock to consist of some 1,400 Rose Comb Reds and 400 White Orpingtons. Many of these were early hatched chicks and were large, strong, vigorous birds, well on towards maturity when we saw them. It is sufficient to say that the quality in the young birds was evident on all sides, as Mr. Clark is a master at the art of mating, and with the record of winnings which he made last year, quality, show quality, is surely to be expected.

Mr. Clark added the White Orpingtons last year, getting seventy-five selected specimens for his foundation stock of breeders, sparing neither pains nor money in selecting the best specimens obtainable. The young birds bred from these are fine white specimens, free from creaminess and showing the deep, low-down Orpington type so seldom found in many of the White Orpingtons of today.

Our visit with Mr. Clark was a very pleasant one, which we will long remember, and we will further say in closing that Mr. Clark is one of Cleveland's prominent business men and that all transactions with him will be strictly along business lines, and you will find him thoroughly reliable and that he will fulfill every promise he makes up to the letter.

You will find Ridge View Farm ad elsewhere in this issue, and if in need of stock in either variety you will do well to write them for prices.

ROSE COMB RHODE ISLAND REDS AT THE INDIANA STATE FAIR.

At the Indiana State Fair, held at Indianapolis, Sept. 6 to 10, there were fifty-nine single entries in the rose comb variety of the Rhode Island Red class, twenty more than in that of any other variety of chickens shown. The next in point of number exhibited was the White Plymouth Rock, with thirty-nine single entries. There were also seven pen entries in the Rose Comb Rhode Island Red class.

This is a fair indication of the popularity obtained by this wonderful variety of fowls, and must be very gratifying to such well-known breeders as Messrs. Irving A. and Frank Churchill Sibley, of South Bend, Ind., who have done so much towards the development of these birds in the West and who have for years been among those to whom a large share of the prizes were awarded, and from whose yards a still larger number of first prize winners have come.

At the Indiana State Fair they were awarded first prize on pen, first and third prizes on cocks, and second prize on cockerels, and many of the other winners were descended from their stock.

The Sibley birds are noted for their shape, being uniformly of the typical Rhode Island Red shape, as well as beautiful in color.

Mr. McCord, who was the judge of Reds at this fair, remarked that the pen exhibited by the Messrs. Sibley was by far the best which he had ever seen, both as individuals, and as being properly mated for results. The Sibleys tell us that they have raised something over two thousand birds this season, and we take great pleasure in commending those of our readers who are looking for stock with which to improve their flocks to them.

When in Painesville, O., I called on W. T. Naylor, who breeds some very fine Blue Andalusians. Mr. Naylor has made several fine importations from England, and is in a position to supply you with Andalusians of quality, containing either domestic or imported blood. We saw among his flock some very fine youngsters, and if you are in need of stock you will do very well to correspond with him.

A NEW DEAL.

Albert Leiber takes a partner—Mr. Albert Leiber, of Indianapolis, and Mr. Carl Walls, of Mitchell, Ind., have formed a poultry partnership and consolidated the stock of the two farms. Mr. Walls taking active charge as manager at the Albert Leiber farm, one mile north of Indianapolis on the Northwestern Traction line. This gives Indianapolis another large fancy poultry farm where birds of the highest quality will be found at all times.

This farm makes a specialty of S. C. Rhode Island Reds, White and Partridge Wyandottes, White Rocks and S. C. Buff Orpingtons. Mr. Leiber has always been a prominent fancier, but was never able until now to get the right party interested with him in the poultry farm, but with Mr. Walls, an experienced breeder and fancier, we predict success from the start.

Mr. Leiber's summer home, overlooking the White River Valley, is one of the handsomest farms in Marion county. The buildings and equipment are of the best. They have a grand lot of stock left from their choicest breeders, with hundreds of choice youngsters coming on. Address Leiber-Walls Poultry Farm, Nora, Ind.

OUR MR. ZIMMER AT BERE A.

On my first stop out of Cleveland I visited the Famous Poultry Farm, Berea, Ohio, the home of Sheppard's Famous

Anconas. These splendid birds are owned and bred by Mr. H. C. Sheppard, who is the president for the International Ancona Club, and is one of the best known Ancona specialists in the country.

By his skillful breeding he has built up a large flock of strictly high grade birds. This is especially true of his cockerels, which are worthy of special mention. They are large and nicely mottled. In each of his several parks are found birds of exceptional beauty, some of the most noted being King William, Prince Albert and Sir Elmer. After seeing these grand specimens, the writer can readily understand why Sheppard's Famous Anconas have won such a remarkable show record in the nation's greatest shows.

In recent years Mr. Sheppard has confined his birds to Madison Square, New York City, and Cleveland, and has won the majority of the first and second prizes in these big shows. In 1907 his birds showed their championship quality by winning all the first and second prizes in the great Madison Square Garden show in the largest Ancona class in its history. On another page will be found Mr. Sheppard's ad.

The color of my thin summer dresses faded terribly when I got in the least bit of perspiration last summer. Isn't there any kind of cotton dress goods that will hold its color?

Disappointed.

Yes, indeed! Simpson-Eddystone Calico Prints in black and white, silver grey, solid

black and fast hazel brown, made by the Eddystone Manufacturing Company, Philadelphia, will not fade from perspiration, sunlight or washing. And the pretty patterns! They enable one to make such stylish dresses.

It seems almost too good to be true that you can secure cotton goods that will make such inexpensive dresses and yet be really serviceable, but I have found these prints to be superior to anything else in cotton dress goods at anywhere near their price. They may be secured at almost any dry goods store.

We are glad to welcome to our columns at all times breeders and fanciers that are "doing things." With this issue we open our advertising columns to a Barred Rock breeder from "out there in Kansas" whose strain has been "making good" for years past. We refer to Frank J. Overstreet, Kiowa, Kan., originator of Overstreet's "Best in the West" Barred Rocks. Mr. Overstreet is a true fancier, life member American Poultry Association and member Plymouth Rock Club. It will pay you to get his "straight from the shoulder" catalogue before buying Barred Rocks.

Louis Rausch, the Barred Rock breeder of Creve Couer, Mo., writes us that he has some fine cockerels and pullets for sale now. He has cockerels that weigh from 5 to 7 pounds and he is willing to help out his patrons with new blood. Write him for prices.

Get More Eggs

When Eggs are Worth Most

Let Us Send You a **Mann's Latest Model Bone Cutter**

On 10 Days Free Trial—No Money in Advance

You can save enough in your feed bill and make enough in extra profits, soon to pay for the machine.

YOU can double your poultry profits by the judicious use of fresh-cut, raw bone in your feeding ration.

Thousands of successful poultry raisers are doing that very thing—doubling their poultry profits by using raw bone.

Because raw bone cuts down the feed bill and increases the yield. It's a money-maker and a money-saver for you.

There isn't a poultry editor in the whole country, nor an experiment station, nor a successful poultry raiser who has tried feeding raw bone who will not tell you it is a profit-maker.

You ought to try it. We make the way easy for you. * * *

are feeding as you cannot know when you use so-called "beef scraps," or the ready mixed commercial foods, or the advertised "poultry foods," made from secret formulae, for which such extravagant claims are made.

You have to buy such foods "on faith," but you know exactly what you are giving your fowls when you feed them raw bone, and your own reason will tell you that it must be greatly superior to "beef scraps," that have been embalmed and preserved with chemicals, and from which much of the real nutriment has been cooked. * * *

Use raw bone this season—cut down your feed bills—get more eggs—get eggs of greater fertility—get bigger hatches and more vigorous chicks—develop your cockerels and pullets earlier—get earlier broilers—earlier layers—larger market fowls—improve the vitality of your entire flock—and best of all, make more money, by doubling your profits. * * *

Get from your butcher the trimmings from the block—fresh bones with meat and gristle adhering to them. Then cut with a

Mann's Latest Model Bone Cutter

—the only bone cutter made that does the work satisfactorily.

Mann's turns easily and cuts rapidly—all the bone and all adhering meat and gristle, wasting nothing.

It turns more easily than any other because its self-governing feed automatically adjusts the cutting to your strength, so that any one can use it.

Its open-hinged cylinder takes in large bones and can easily be kept clean.

It is strong and durable and requires few repairs.

Mann's Latest Model is the result of years of experience in bone cutter construction.

We are so sure that you will be satisfied with it, that we will gladly send you one—

On Ten Days Free Trial No Deposit No Money in Advance

Get our catalogue and select the machine you want to try. We will ship it to you and let you use it for 10 days on your own premises. If you are then satisfied, buy it. If not, return it at our expense.

Can we make you a fairer offer than that? We couldn't afford to do it if we were not sure of what our machine will do. You cannot afford to keep poultry without a bone cutter. It will double your profits. Send for catalogue today and make your selection.

"Her Egg Basket Is Always Filled"

Fowls of all kinds and of all ages need in their food an abundance of those elements which the professors call "protein." It is protein which makes the white of the egg, the lean meat of all animals, and a large portion of the bones and feathers. And it must come from the food.

So chicks need plenty of protein to make them grow; pullets and cockerels need it for development; cocks need it for vigor and vitality, and the hen absolutely must have it if she is to lay eggs.

Protein is found in small quantities in all grains, but only in small quantities. A single ounce of raw bone contains more protein than a quarter of a pound of ordinary grains. In summer when fowls are on the range they get protein in the bugs and worms and insects, which they eat with such relish, but in winter or when confined, you must supply this needed protein or you will not and cannot get the best results.

Raw bone supplies it, in its most available form and at less cost than any other food in the world.

Remember, you have to feed into the hen every atom she uses in making eggs. She can't lay eggs in abundance unless you give her plenty of egg-making materials. Raw bone is the cheapest and the most productive of all egg-making foods.

It is the cheapest because it is richest in the food elements which fowls most need, and because it costs but little more than the time it takes to cut it.

It is best because it contains these elements in their most digestible form—and you know exactly what you

POULTRYMEN'S BARGAIN SUPPLY HOUSE

Guaranteed Building Material Supplies Sold Direct At Factory Prices

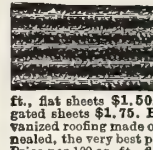

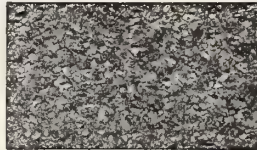

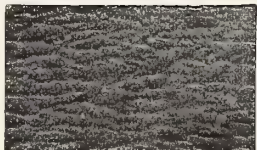

We make a specialty of supplying Poultry Raisers with everything in building material that they use with the exception of lumber. Should there be any special equipment that you want, we will be glad to have you take it up with us. Buy from us direct and save middleman's profits.

Through our policy of buying entire factory lots of merchandise and the purchase of a great deal of material at forced sales we come into possession of immense quantities of high-grade building material and machinery. Note the various items and prices on this page. These and many others in OUR NEW CATALOG (just off the press), offer an unusual opportunity to you to purchase guaranteed material at low cost. Act now and save money.

OUR GUARANTEE

The keynote of our business is every article guaranteed to be exactly as represented and to prove satisfactory to the purchaser. Any material not entirely satisfactory can be returned for an exchange or refund of money at our freight expense both ways.

Ready Roofings! Metal Roofings! Roofing Pitch and Roof Coatings!

Steel Roofing
Only \$1.50 per sq.
These are good second-hand sheets of heavy weight, free from nail holes, painted on both sides. Price per 100 sq. ft., flat sheets \$1.50. Price per 100 sq. ft., corrugated sheets \$1.75. Highest grade, Brand New galvanized roofing made of open hearth process, box annealed, the very best process of making metal roofing. Price per 100 sq. ft., flat sheets \$2.85. Price per 100 sq. ft., corrugated sheets \$3.10.

"Best Yet" Galvo Rubber Roofing
is a very high-grade wool felt roofing thoroughly saturated with Gilsonite asphalt and coated with a secret rubber coat on both sides. Nothing better of this class manufactured. Each roll complete with nails and cement. Price: One-ply \$1.20 per sq., two-ply \$1.40 per sq., three-ply \$1.75 per sq. We offer our Central Brand Flint Surfaced Asphalt Roofing, the highest grade of its kind, each roll complete with nails and cement. Price: One-ply \$1.20 per sq., two-ply \$1.45 per sq., three-ply \$1.80 per sq. We offer Roofing Mill Ends of either the rubber surfaced or flint coated roofing at: One-ply 95¢ per sq., two-ply \$1.10 per sq., three-ply \$1.40 per sq. Samples free—charges prepaid.

These low priced mill ends are just the thing to nail with cemented seams inside and outside of your poultry house board walls. Makes them air-tight, moisture-proof, vermin - proof and sanitary.

A Fortunate Purchase!

We have just purchased 2500 rolls of the highest grade roofing made by one of the leading manufacturers. It is thickly coated with crushed glass. The body of the roofing is a very heavy felt, heavier than the ordinary three-ply, and it is thoroughly saturated with Gilsonite asphalt and coated with the secret rubber coating. The roofing has rubber surfaced back and coat on top, with nails and weighs about 80 lbs. to the sq. One of the biggest mail order houses is advertising a roofing similar to this as their celebrated "Marble Coat Roofing." Their roofing weighs about 55 lbs. to the sq. Our roofing weighs about 80 lbs. to the sq. Note how much heavier and stronger. Their price is \$2.25 per sq. Our special price on this roofing while it lasts, \$2.00 per sq. It is strictly perfect stock, not mill ends and is complete, with nails and cement. Samples sent free—charges prepaid.

Steel Imitation Brick Siding

Only \$1.20 per sq. This is made from rolled sheets, not entirely free from holes. Makes 1st class fireproof siding for poultry houses, barns, etc. Painted red both sides.

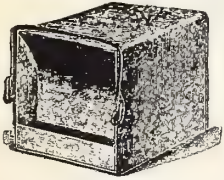

Diamond C Brand Roof Coating
Will preserve any kind of roof, whether of metal, composition felt, or shingles. Price per 5 gal. can \$4.93, per 10 gal. can \$3.60, per barrel of 50 gallons \$12.50.

Don't Be Held Up!

All Poultry Raisers are large users of Building Supplies and oftentimes are charged very high prices locally, because the local dealer is not in position to buy right. Our catalog shows manufacturers' prices with our one small uniform profit added. Write for it to-day.

'C M & S' Automatic POULTRY FOUNTAIN

Made of heavy galvanized iron. It is closed tight except for a small space near the bottom where fowls have access to water. Can be placed on a stove to warm and will retain warmth for hours. Absolutely sanitary. Fowls can't turn it over. Chicks can drink without danger of drowning.

Prices
One-half gallon size 35¢ each, \$4.00 per dozen. One gallon size 50¢ each, \$5.00 per dozen. Two gallon size 65¢ each, \$7.00 per dozen.

Iron Pipe & Fittings

We are headquarters for wrought iron pipe. Note our prices:
3-4 in. Black 3 1-4¢ ft. Galv.
4 1-2 in. Black 4 1-2¢ ft. Galv.
6 1-2 in. Black 6 1-2¢ ft. Galv.
8 1-2 in. Black 8 1-2¢ ft. Galv.
10 in. Black 10 1-2¢ ft. Galv.
12 in. Black 12 1-2¢ ft. Galv.

Poultry Netting

One inch mesh carried in stock from 1 to 4 ft. wide. Two inch mesh carried in stock from 1 to 8 ft. wide. Price 4 ft. wide, 2 in. mesh, only \$2.50 per bale of 150 lineal ft. Other widths in proportion.

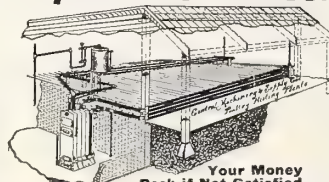

House-Plumbing and Water Supply Systems

We will furnish you with a complete pneumatic air pressure supply outfit that will furnish you running water the same as city waterworks. Prices range from \$40 upward. We will furnish you complete house plumbing outfit like shown in this picture, including the pneumatic water supply system, the bath room outfit, the kitchen sink and range boiler and all the pipe and pipe fittings to install—\$125 upward.

Our Free Catalog No. 188
shows plain net prices on every article. Write for it today. We also handle light and heavy machinery, gasoline engines, windmills, etc.

HEATING APPARATUS

Special Low-Priced Hot Water Heating Plants for Brooders

Your Money
Back if Not Satisfied

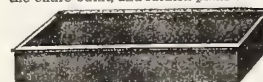

We are specialists in Hot Water Heating for Poultry Raisers, supplying plants, not only for the poultry house but for the dwelling house as well. We design special installations for any kind of poultry house system, and guarantee absolutely satisfactory results. We will furnish plans and specifications showing how to install to fit your requirements, free of charge. We will not only guarantee to save you money, but guarantee perfect satisfaction on the apparatus or your money will be refunded. We have heaters of all kinds for the small as well as the largest of poultry house installations. Send us a plan or sketch of your poultry farm showing the sizes of the houses, and we will figure out exactly what is needed and make you the lowest estimate for the entire equipment.

If your home is not heated with hot water, write for one of our information blanks, and let us quote you on hot water heating apparatus for your home. We will sell you the best hot water heating plant that can be designed and save you upwards of 50 percent on the cost of the material. Average cost of all the material for a hot water heating plant including the boiler, radiators, pipe and everything needed for a 5 room house \$125.00; for an 8 room house \$180.00; for a 10 room house \$250.00; for a 14 room house \$300.00. Write today for information blank and get ready for this winter.

Automatic Water Supply Systems For Poultry Yards And Houses.

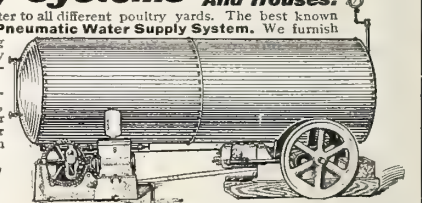

Poultry Raisers will readily realize the necessity of running water to all different poultry yards. The best known method of supplying this on poultry farms is "C. M. & S. Co's" Pneumatic Water Supply System. We furnish these from the small hand pump outfits to the larger size requiring gasoline engine for pumping. Water can be piped under ground to any distance, the same as city water. Entire apparatus frost proof and protected from the heat of sun in summer.

Such an outfit affords unequalled fire protection and reduces insurance cost. Tell us the approximate number of gallons used in 24 hours, depth from surface to unfilling water supply in your well, and whether the tank and engine would be placed in the basement of your house or in a special cellar built over the well, and we will make you figures on the entire outfit, and furnish plans to install. No charge for this.

Feed Cookers SILOS at Low Cost

Our low priced Silos just the thing for the poultry raiser. Made of best Red Cypress, two inches thick. Every stave is carefully machine jointed, so the entire joint has full and perfect bearing on the next stave. Bottoms are made in the same way and both staves and bottoms are bored for dowel pins. Hoops are fitted with special draw lugs so they may be easily tightened. No. A. Size 8 ft. diam. 8 ft. high, complete with top \$75.00; No. B size 10 ft. diam. 10 ft. high, complete with top \$110.00.

ALL GOODS GUARANTEED

CONCRETE Hen's Nest

Lasts Forever; Absolutely Sanitary! The lime in the cement prevents mites working into it. Can be burned out to disinfect without injury to the nest. Warm in winter. Cool in summer. Draft impossible, so hen cannot acquire roach in this nest. Price 90¢ each, \$9.00 per doz.

Back-Geared Windmills

Strongest and heaviest wind mills on the market; nothing better to be had at any price. Six foot mill complete, only \$15.00. Eight foot mill, only \$19.40. Larger sizes shown in our catalogue.

Central Machinery & Supply Co.

2580 Archer Ave
Chicago, Ill.

CLASSIFIED ADS

UNDER this heading ads will be inserted for six cents per word each month for less than three months, and **four cents per word each insertion for three months or longer.** Changes in copy allowed every three months. Numbers and initials count as words. All ads will be inserted under **classified headings.** No ads accepted at less than an average of fifty cents per insertion. Terms, cash with each ad. Count the words carefully to avoid delay in publishing. Write your copy plainly, as upon this the correctness of your ad largely depends. When placing your ads remember that advertisers of Classified Ads get better returns from AMERICAN POULTRY JOURNAL than from any other poultry journal—none excepted. On writing any of these advertisers mention A. F. J.

ALL COPY FOR CLASSIFIED ADS MUST REACH US BY THE 19th OF THE MONTH PRECEDING DATE OF ISSUE

Lock Box 510, AMENIA, N. Y.

"RINGLETS" STAND ALONE, VICTORS OF THE FIELD

At America's Imperial Show, Madison Square Garden, New York, Winters of 1908 and 1909

E. B. THOMPSON'S BARRED P. ROCKS

As usual win the leading prizes and achieve the highest honors that can come to any breed. First prize on cockerel, first prize on cock, the Great National Silver Cup presented by the American Plymouth Rock Club for best cock, cockerel, hen and pullet. Double the number first prizes of any competitor. Special for best shaped male, special for best headed male, special on hen, special on pullet, the Sweepstakes Special in Gold for best Plymouth Rock on exhibition of either sex and any variety. The Imperial prize of the show, special for champion male.

At the 1909 New York Show my 1st Prize Sweepstakes Cup Exhibition Pen was Declared by Expert Opinion to be the Finest Ever Exhibited. A Paragon of Perfection, and created a Sensation as the Finished Achievement in Modern Barred Rock Breeding.

For more than twenty years at New York my "Ringlet" victories have been complete. Exhibited by me personally they have won a grand total of 127 prizes, 69 of these being firsts and specials, being more first and special prizes than won by any competitor in the history of the show. These include the \$100 Champion Challenge Trophy, won three times; the \$100 Association Cup, won three times; the \$100 Sweepstakes Cup offered by the President for best Plymouth Rock cock, cockerel, hen and pullet, any variety.

The "Ringlet" world's record at New York four years in succession is a page of history. The "Ringlet" record of first on exhibition pen three years in succession is the undisputed Champion. My clean sweep of FIRST, SECOND, THIRD, FOURTH AND FIFTH PRIZES on pullets has never been approached in Madison Square Garden, and stands alone and unequalled.

One thousand grand breeding cockerels for sale; elegant hens and pullets in any number. Show "Ringlet" record of first on exhibition pen three years in succession is the undisputed Champion. My clean sweep of FIRST, SECOND, THIRD, FOURTH AND FIFTH PRIZES on pullets has never been approached in Madison Square Garden, and stands alone and unequalled.

Winners at New York, from Life.

BUFF WYANDOTTES THE KIND THAT WIN

Have broken up my breeding pens and will sell some of my fine breeders at very low prices.

Now is the time to get bargains. Am now booking orders for

Young Show and Breeding Stock

of which I have a fine lot. If you want to win at your show get birds from me. The record of my stock in the show room is unequalled. My large catalogue gives full particulars. Write for it today; mention American Poultry Journal.

Breeders and Exhibitors of Barred Plymouth Rocks and Single Comb White Leghorns

Well! Here we are again and stronger than ever. I cannot tell you in a satisfactory way just how fine our young cockerels and pullets are. If you want exhibition birds for Fall and Winter Shows, now is the time to make your selection. If you want utility birds of the best laying strains, we can accommodate you. We have a greater number than ever of exceptional birds of both Barred Plymouth Rocks and Single Comb White Leghorns. We invite your inspection of our stock and plant at any time. Come and see for yourself.

John H. Hallock, Proprietor

Buff Wyandottes

AT THE GREAT WEST MICHIGAN STATE FAIR—Won in the hottest competition first and third cock, third hen, first and third pullet and second and third cockerel. Silver cup three years in succession for best pen at Grand Rapids. 200 head grand youngsters, 50 yearling hens and 5 cock birds for sale. If you want the soft mellow Buff kind (buff to the skin) get my rock bottom prices.

E. A. Knapp, 451 Grandville Avenue, Grand Rapids, Mich.

ANDALUSIANS

Nine years careful breeding has produced an excellent laying strain—layers of large, white eggs. Winners at Pittsburg, Fort Wayne, Toledo, Tiffin and Mansfield. I always win the cream—never defeated. Exhibition and breeding stock for sale. Circular.

Orpingtons

BLACK, WHITE and BUFF. We have birds of the most advanced type. Our sensational importations put us at the head in Bufts and Whites, as well as in Blacks. Remember, birds of our strain have produced more winning Blacks than all others put together. Some grand cockerels at all prices. Catalog free.

Brown & Coleman : Station L : Cincinnati, Ohio

REDS

"There are among your flock 2 females which if mated to these males (today in my yards) would produce Reds the equal of which the world has never seen."—Judge Thos. F. Rigg. Winners at Chicago, Cincinnati, Indianapolis, Toledo, Detroit, Milwaukee. 3,000 R. I. Reds for sale. Both combs.

EDWIN R. GORNISH : : : : EDWARDSBURG, MICHIGAN

Foster's "Duke of Kent" Black Orpingtons

always in the lead. At the Northern Ind. Tri-State Fair held at Ft. Wayne, Sept. 14-16, in a class of over 100 S. C. Black Orpingtons I won as follows: 1, 2 cock, 1, 2, 3 egl., 1, 3 hen, 1, 2, 3 pullet, specials for best display of Orpingtons and best shaped and best colored male bird in English class. Also furnished first cockerel the following week at Nashville, Tenn. show, which makes him champion of the South. If you want guaranteed winners I have them.

SHEPPARD'S FAMOUS ANCONAS

THE
WORLD'S
BEST

Rose or Single Comb. First at the world's greatest shows, including the Dairy Show, London, Eng., Madison Square Garden, N. Y. and Cleveland. Won all the 1st and 2d prizes at the great Madison Square show in the largest Ancona class in the history of the big show. Have also the greatest record for egg production; having laid 78 eggs in 82 consecutive days. A handsome lot of exhibition and utility birds for sale. If you want to win at your show, write me.
